Exam Questions FCP_FMG_AD-7.6

FCP - FortiManager 7.6 Administrator

NEW QUESTION 1

Refer to the exhibit.

```
FortiManager # diagnose dvm device list
--- There are currently 6 devices/vdoms managed ---
--- There are currently 6 devices/vdoms count for license ---

TYPE          OID   SN              HA   IP           NAME          ADOM   IPS          FIRMWARE   HW_GenX
fmgfaz-managed 188   FGVM02TM24013504 -   100.65.1.111 BR1-FGT-1     My_ADOM 7.0 MR6 (3401) N/A
|- STATUS: dev-db: not modified; conf: in sync; cond: pending; dm: installed; conn: up; template:[modified]default
|- vdom:[3]root flags:0 adom:My_ADOM pkg:[imported]BR1-FGT-1
```

Which two statements about the output are true? (Choose two.)

- A. The latest revision history for the managed FortiGate does not match the device-level database.
- B. Configuration changes have been installed on FortiGate, updating policy and device-level database.
- C. The latest revision history for the managed FortiGate does match the FortiManager policy database.
- D. The system template default will override device-level database configurations.

Answer: AD

Explanation:

The status "pending" indicates the latest revision history does not match the device-level database, meaning there are unapplied changes. The template is marked as [modified], so the system template default will override device-level database configurations when installed.

NEW QUESTION 2

Refer to the exhibit.

FortiManager policy package

Import Device - HQ-NGFW-1 - Interface Mapping & Policy (2/5)

Create a new policy package for import.

Policy Package Name: HQ-NGFW-1

Folder: root

Policy Selection: **Import All (6)** Select Policies to Import

Object Selection: **Import only policy dependent objects** Import all objects

Device Interface	Mapping Type	Normalized Interface
<input checked="" type="checkbox"/> port2	Per-Device Per-Platform	LAN
<input checked="" type="checkbox"/> port4	Per-Device Per-Platform	Port4
<input checked="" type="checkbox"/> port6	Per-Device Per-Platform	port6

3

Add mappings for all unused device interfaces

Next > Cancel

An administrator added a FortiGate device to FortiManager with the default object settings at the ADOM layer. What can you conclude from the import policy package process of the HQ-NGFW- 1 device?

- A. The administrator must select Per Platform for all interfaces to correctly detect all interfaces from HQ- NGFW-1.
- B. The administrator must manually create the port4 interface on the ADOM layer to avoid import policy errors.
- C. FortiManager will create LAN, port4, and port6 as normalized interfaces at the ADOM layer.
- D. FortiGate may not work as expected when the administrator does not import all objects.

Answer: C

Explanation:

The import process shows that FortiManager will create normalized interfaces named LAN, port4, and port6 at the ADOM layer, mapping them to the corresponding device interfaces based on the import settings.

NEW QUESTION 3

An administrator has assigned a global policy package to a new ADOM named ADOM1. What will happen if the administrator tries to create a new policy package in ADOM1?

- A. The administrator will be able to select the option to assign the global policy package to the new policy package.
- B. FortiManager will automatically assign the global policy package to the new policy package.
- C. FortiManager will automatically install policies on the policy package in ADOM1.
- D. The administrator will have to assign the global policy package from the global ADOM.

Answer: A

Explanation:

When a global policy package is assigned to an ADOM, administrators creating new policy packages within that ADOM have the option to select and assign the global policy package to the new policy package if desired.

NEW QUESTION 4

You want to let multiple administrators work in the same ADOM without creating configuration conflicts. What is the best and the most effective solution to apply?

- A. Configure RADIUS authentication to assign ADOM roles to each user.
- B. Enable workflow mode, which is the only way to prevent concurrent configuration conflicts.
- C. Assign administrators with JSON API access to the FortiManager.
- D. Activate workspace mode in the ADOM settings.

Answer: D

Explanation:

Activating workspace mode in the ADOM settings allows multiple administrators to work concurrently in the same ADOM by isolating their configuration changes in separate workspaces, preventing conflicts and enabling effective collaboration.

NEW QUESTION 5

What is the purpose of ADOM revisions?

- A. ADOM revisions find unused, duplicate, and unnecessary firewall policies and objects.
- B. ADOM revisions show specific changes in a policy package when it is installed.
- C. ADOM revisions compare previous snapshots of the Policy Package and ADOM-level objects with the device-level database.
- D. ADOM revisions save the current state of all policy packages and objects for an ADOM.

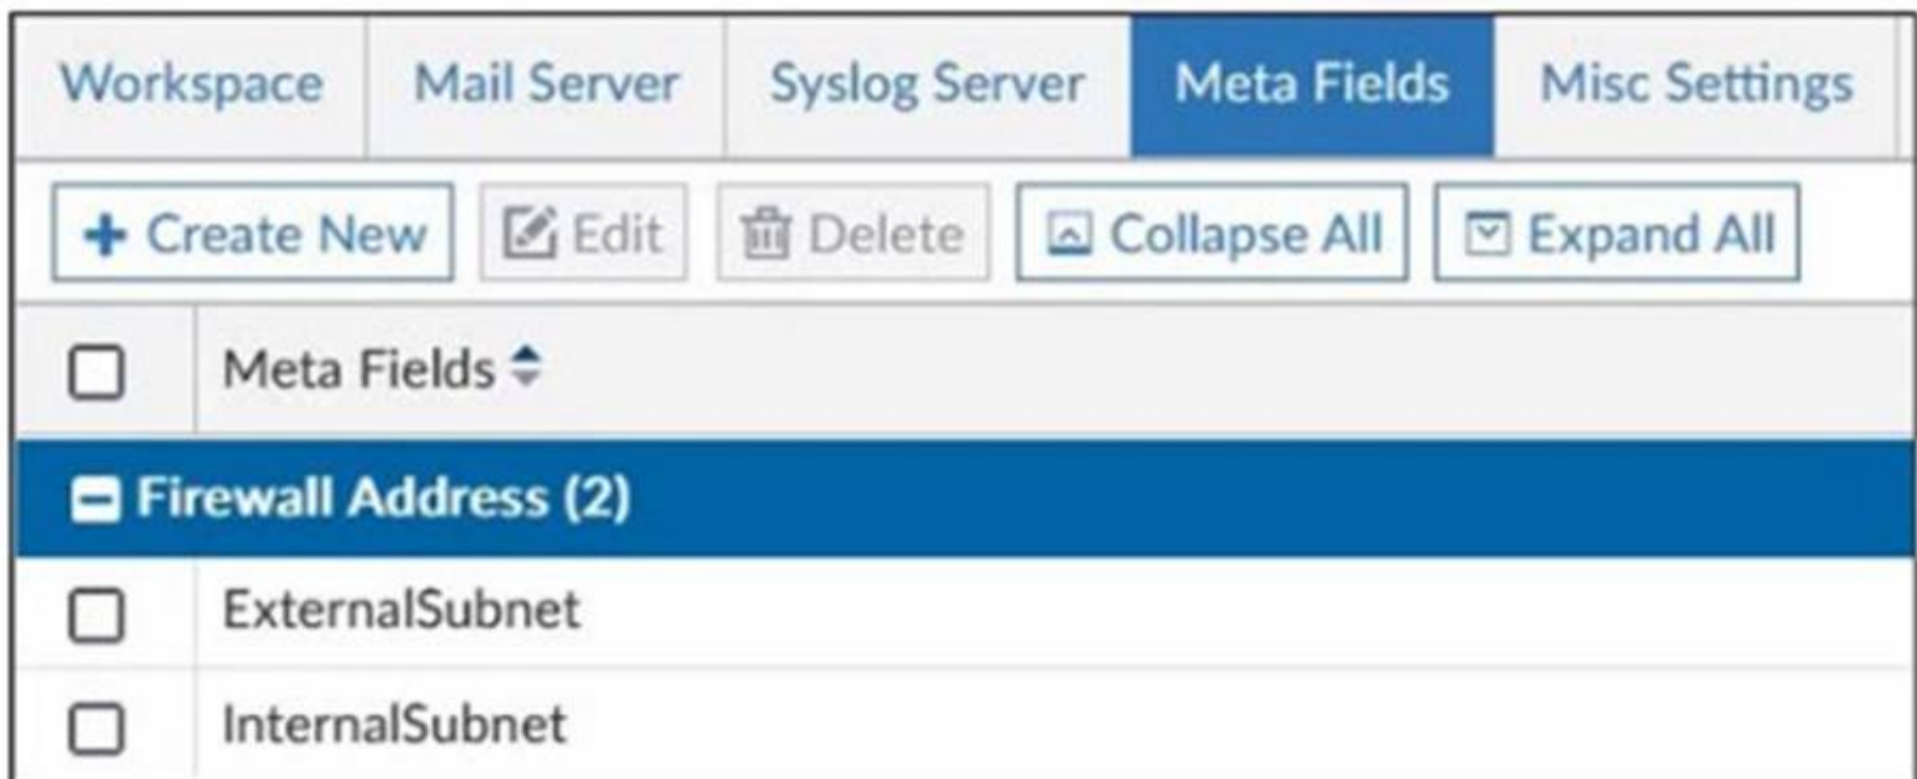

Answer: D

Explanation:

ADOM revisions save the current state of all policy packages and objects within an ADOM, allowing administrators to track changes over time and revert to previous configurations if needed.

NEW QUESTION 6

Refer to the exhibit.

An administrator created two new meta fields in FortiManager. Which operation can you perform with these parameters?

- A. You can add them to objects as custom attributes.
- B. You can export them to be used in other ADOMs.
- C. You can use them as variables in scripts.
- D. You can invoke them using the \$ character.

Answer: A

Explanation:

Meta fields in FortiManager can be added to objects as custom attributes, allowing administrators to categorize and add additional information to firewall objects for easier management and identification.

NEW QUESTION 7

Refer to the exhibit.

```
FortiManager # config system global
(global)# set workspace-mode normal
(global)# end
FortiManager #
```

What are two results from the configuration shown in the exhibit? (Choose two.)

- A. Ungraceful closed sessions will keep the ADOM in a locked state until the administrator session times out.
- B. The administrator can lock policy blocks and FortiManager global ADOM.
- C. The same administrator can lock more than one ADOM at the same time.
- D. The administrator must have access to the ADOM to approve changes.

Answer: AB

Explanation:

In normal workspace mode, ungraceful session closures will keep the ADOM locked until the session times out, preventing other administrators from editing. Normal workspace mode allows administrators to lock policy blocks and the global ADOM, providing granular locking control.

NEW QUESTION 8

An administrator configures a new BGP peer in the FortiManager device-level database of FortiGate. They reinstall the policy package to the managed FortiGate device without any errors. However, when the administrator logs in to FortiGate, they do not see the BGP configuration changes. What is the most likely reason why FortiManager did not push the BGP peer changes to FortiGate?

- A. The administrator must run a sanity check on FortiManager to make sure the database is not corrupted.
- B. Fortigate has a BGP template assigned on the FortiManager database.
- C. The administrator must use the Install Wizard and select Install device settings only to push BGP settings
- D. The FortiGate firmware version is different from the FortiManager ADOM version.

Answer: B

Explanation:

If a BGP template is assigned to the FortiGate device on FortiManager, device-level BGP configurations made directly in the device-level database are overridden by the template settings, so the changes do not get pushed to the device.

NEW QUESTION 10
