

Microsoft

Exam Questions AB-731

AI Transformation Leader (beta)

NEW QUESTION 1

You need to recommend a service that supports indexing information and knowledge mining by extracting insights from documents. What should you recommend?

- A. Microsoft Foundry
- B. Azure Vision in Foundry Tools
- C. Azure Document Intelligence in Foundry Tools
- D. Azure AI Search

Answer: D

NEW QUESTION 2

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Prompt engineering changes how a generative AI model was trained.	<input type="radio"/>	<input type="radio"/>
Prompt engineering focuses on designing clear, concise, and context-rich instructions.	<input type="radio"/>	<input type="radio"/>
Effective prompt engineering involves maximizing the number of tokens used in each request.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Prompt engineering changes how a generative AI model was trained.	<input type="radio"/>	<input checked="" type="radio"/>
Prompt engineering focuses on designing clear, concise, and context-rich instructions.	<input checked="" type="radio"/>	<input type="radio"/>
Effective prompt engineering involves maximizing the number of tokens used in each request.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION 3

You plan to meet with a group of stakeholders to discuss how generative AI can benefit your company. You need to provide the stakeholders with a relevant description of generative AI during the meeting. Which description should you use?

- A. Generative AI is designed to translate documents into other languages.
- B. Generative AI is designed to predict future trends based on historical data.
- C. Generative AI is designed to generate responses based on a user's natural language prompts.
- D. Generative AI is designed to recommend products based on user behavior.

Answer: C

Explanation:

Generative AI's defining characteristic is that it creates new content (text, images, code, summaries, drafts) in response to instructions—most commonly natural language prompts. Option C captures that general-purpose description in a stakeholder-friendly way: users provide prompts and the system generates responses or content. This framing is broad enough to cover common business value scenarios such as summarizing documents, drafting communications, creating marketing copy, generating reports, building assistants, and producing structured outputs from unstructured requests. Option A is a single use case (translation), not the defining description. Option B describes predictive analytics/forecasting, which is a different AI category focused on outcomes and probabilities rather than content creation. Option D describes recommendation systems, typically driven by ranking/behavioral signals; while AI can enhance recommendations, that is not the core definition of generative AI. Therefore, the most accurate and relevant description for stakeholders is C.

NEW QUESTION 4

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
A manufacturer can use Azure Vision in Foundry Tools to identify product defects on an assembly line.	<input type="radio"/>	<input type="radio"/>
A logistics company can use Azure Vision in Foundry Tools to recognize package shipping labels.	<input type="radio"/>	<input type="radio"/>
The HR department at your company can only use Azure Vision in Foundry Tools to extract written content from Microsoft Word files.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:
Answer Area

Statements	Yes	No
A manufacturer can use Azure Vision in Foundry Tools to identify product defects on an assembly line.	<input checked="" type="radio"/>	<input type="radio"/>
A logistics company can use Azure Vision in Foundry Tools to recognize package shipping labels.	<input checked="" type="radio"/>	<input type="radio"/>
The HR department at your company can only use Azure Vision in Foundry Tools to extract written content from Microsoft Word files.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION 5

Your company uses a fine-tuned generative AI solution trained on data that is representative of the general population. You discover that some of the generated responses include inappropriate or exclusionary language based on ableist assumptions. You need to prevent the inappropriate responses. Your solution must minimize costs. What should you do?

- A. Apply a newer version of the generative AI model.
- B. Apply a content-moderation filter.
- C. Create a new version of the solution that is trained on only inclusive and representative content.
- D. Create a new version of the solution that is trained on only exclusionary content.

Answer: B

NEW QUESTION 6

HOTSPOT

HOTSPOT - Select the answer that correctly completes the sentence.

You use _____ to train a model that will forecast product demand based on historical sales data.

You use

▼

Azure Machine Learning

Azure AI Search

Azure OpenAI

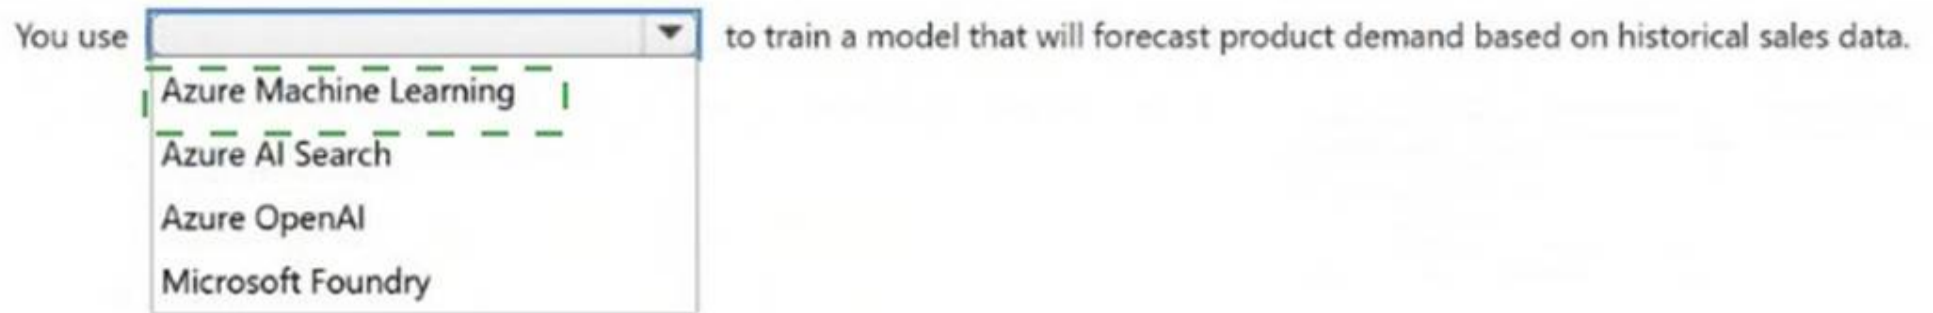

Microsoft Foundry

 to train a model that will forecast product demand based on historical sales data.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 7

Your company plans to build a generative AI solution based on internal data. You recommend using Microsoft Foundry as a starting point to develop and manage the solution. What is a key benefit of using Microsoft Foundry for this project?

- A. Provides a scalable platform for developing and deploying generative AI solutions.
- B. Removes the need to select or configure the underlying AI model.
- C. Enables business users to build generative AI solutions.
- D. Offers a low-code platform for developing generative AI solutions.

Answer: A

NEW QUESTION 8

You are exploring how Microsoft 365 Copilot uses Microsoft Graph to deliver AI-powered experiences. Which information in Microsoft Graph can Copilot use by default?

- A. emails, files, meetings, and chats in Microsoft 365
- B. data stored in a file share
- C. social media activity
- D. content from public websites

Answer: A

NEW QUESTION 9

You have a business unit that uses an AI solution to process loan applications. You discover that the solution rejects the application of all applicants that are older than 60 years of age. Which Microsoft responsible AI principle is this violating?

- A. accountability
- B. transparency
- C. fairness
- D. reliability and safety

Answer: C

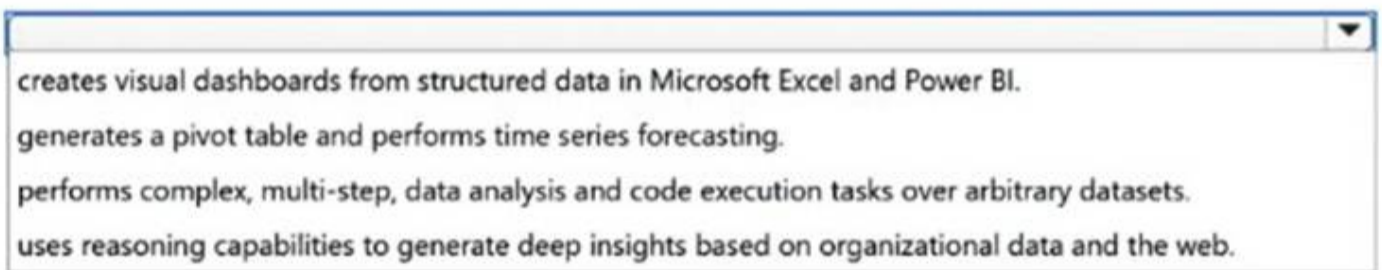

NEW QUESTION 10

HOTSPOT

Select the answer that correctly completes the sentence. The Researcher agent in Microsoft 365 Copilot .

Answer Area

The Researcher agent in Microsoft 365 Copilot

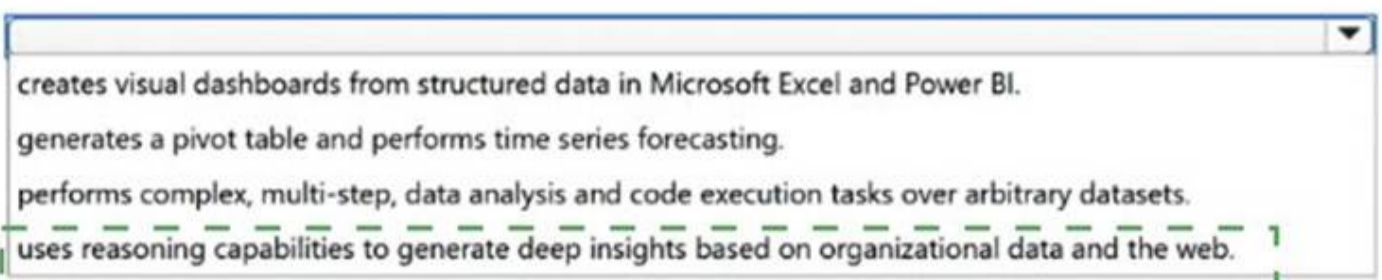

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

The Researcher agent in Microsoft 365 Copilot

NEW QUESTION 10

HOTSPOT

- Select the answer that correctly completes the sentence.

Adopting Microsoft responsible AI principles is important for your organization because the principles .

Adopting Microsoft responsible AI principles is important for your organization

because the principles

- ensure that AI models deliver consistent and equitable results.
- help organizations increase trust in fully autonomous AI systems.
- promote the ethical and accountable use of AI.
- standardize model development practices across AI teams.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Adopting Microsoft responsible AI principles is important for your organization

because the principles

- ensure that AI models deliver consistent and equitable results.
- help organizations increase trust in fully autonomous AI systems.
- promote the ethical and accountable use of AI.
- standardize model development practices across AI teams.

NEW QUESTION 14

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Microsoft 365 Copilot connectors enable you to index data from multiple sources to make the data available in Copilot.	<input type="radio"/>	<input type="radio"/>
You can build a custom Microsoft 365 Copilot connector when the available connectors do NOT meet your data integration requirements.	<input type="radio"/>	<input type="radio"/>
To use Microsoft 365 Copilot connectors, you need a Microsoft Copilot Studio license.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Microsoft 365 Copilot connectors enable you to index data from multiple sources to make the data available in Copilot.	<input checked="" type="radio"/>	<input type="radio"/>
You can build a custom Microsoft 365 Copilot connector when the available connectors do NOT meet your data integration requirements.	<input checked="" type="radio"/>	<input type="radio"/>
To use Microsoft 365 Copilot connectors, you need a Microsoft Copilot Studio license.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION 19

HOTSPOT

- Select the answer that correctly completes the sentence. The primary goal of generative AI is _____ .

Answer Area

The primary goal of generative AI is

▼

to analyze trends and classify data sources.

to create new content, such as text, images, or code.

to make predictions based on historical data.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

to create new content, such as text, images, or code.

Generative AI is defined by its ability to produce new outputs—content that did not previously exist in exactly that form—based on patterns learned from large datasets. That content can be text (emails, summaries, policies), images (design mockups, marketing visuals), code (snippets, scripts), audio, and more. Therefore, the correct completion is ??to create new content, such as text, images, or code.??

The other options describe different AI categories. ??Analyze trends and classify data sources?? is primarily analytical/classification work, typically associated with traditional machine learning models (for example, clustering, categorization, fraud classification). ??Make predictions based on historical data?? is predictive AI (forecasting demand, predicting churn, estimating failure probability). While generative AI can assist those workflows by explaining results or drafting narratives, its primary purpose is not classification or forecasting—it is content synthesis.

In practical business value terms, this is why generative AI is commonly deployed for productivity tasks like drafting and rewriting content, summarizing long documents, generating customer communications, creating knowledge assistants, and producing structured outputs (tables, bullet lists, JSON) from unstructured prompts. The model's differentiator is its ability to transform instructions and context into coherent, human-like content.

NEW QUESTION 22

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Microsoft 365 Copilot helps users create and analyze content in Microsoft 365 apps.	<input type="radio"/>	<input type="radio"/>
Microsoft Copilot Studio can only be used to customize Microsoft 365 Copilot.	<input type="radio"/>	<input type="radio"/>
Microsoft Security Copilot uses AI to assign sensitivity labels to documents.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Microsoft 365 Copilot helps users create and analyze content in Microsoft 365 apps.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft Copilot Studio can only be used to customize Microsoft 365 Copilot.	<input type="radio"/>	<input checked="" type="radio"/>
Microsoft Security Copilot uses AI to assign sensitivity labels to documents.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION 26

HOTSPOT

- What should you use for each task? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Extracting structured data from forms and invoices:

▼

Azure Language in Foundry Tools

Azure Document Intelligence in Foundry Tools

Azure Vision in Foundry Tools

Summarizing written content from business reports:

▼

Azure Language in Foundry Tools

Azure Document Intelligence in Foundry Tools

Azure Vision in Foundry Tools

Generating descriptive text for uploaded images:

▼

Azure Language in Foundry Tools

Azure Document Intelligence in Foundry Tools

Azure Vision in Foundry Tools

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Extracting structured data from forms and invoices: Answer: Azure Document Intelligence in Foundry Tools

Summarizing written content from business reports: Answer: Azure Language in Foundry Tools

Generating descriptive text for uploaded images: Answer: Azure Vision in Foundry Tools

These three tasks align to three different Azure AI capability families: document processing, language understanding/generation, and computer vision.

Forms and invoices are semi-structured documents where the business need is to extract specific fields (IDs, names, totals, dates) reliably into structured output. Azure Document Intelligence is designed for intelligent document processing and includes prebuilt models (such as invoices) as well as custom extraction options, making it the correct choice for structured data extraction from documents.

Summarizing written business reports is an NLP task focused on compressing long text into key points, themes, and action items. Azure Language provides language processing capabilities (including summarization features within language service capabilities), so it is the best fit for summarization scenarios.

Generating descriptive text for images (image captioning/description) is a computer vision task. Azure Vision can analyze uploaded images and return descriptions/captions and other visual insights, which directly matches the requirement to produce descriptive text from images.

NEW QUESTION 31

Your company plans to use generative AI to help build a website that will showcase various existing products. Which capability best describes a benefit of using generative AI for this project? Select the BEST answer.

- A. translating product descriptions into a different language
- B. analyzing product sales to identify patterns and trends
- C. designing a new product based on customer requirements
- D. creating product descriptions based on product specifications

Answer: D

NEW QUESTION 32

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Using incomplete or poor-quality data during generative AI model training can increase costs.	<input type="radio"/>	<input type="radio"/>
AI models rely on training data to learn patterns and identify relationships to produce outputs.	<input type="radio"/>	<input type="radio"/>
Generative AI models trained on non-representative datasets can produce inaccurate or unbalanced results.	<input type="radio"/>	<input type="radio"/>

- A. Mastered

B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Using incomplete or poor-quality data during generative AI model training can increase costs.	<input checked="" type="radio"/>	<input type="radio"/>
AI models rely on training data to learn patterns and identify relationships to produce outputs.	<input checked="" type="radio"/>	<input type="radio"/>
Generative AI models trained on non-representative datasets can produce inaccurate or unbalanced results.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 35

HOTSPOT

- Select the answer that correctly completes the sentence.

When you use Microsoft 365 Copilot connectors to connect external content to _____, your users can find, summarize, and learn from line-of-business (LOB) data by using natural language prompts.

Answer Area

When you use Microsoft 365 Copilot connectors to connect external content to , your users can find, summarize, and learn from line-of-business (LOB) data by using natural language prompts.

- Azure AI Search
- Microsoft Graph
- Microsoft Purview
- Microsoft SharePoint

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

When you use Microsoft 365 Copilot connectors to connect external content to , your users can find, summarize, and learn from line-of-business (LOB) data by using natural language prompts.

- Azure AI Search
- Microsoft Graph
- Microsoft Purview
- Microsoft SharePoint

NEW QUESTION 40

HOTSPOT

You need to recommend an AI solution for each task. The solutions must use prebuilt AI capabilities to reduce development time. What should you recommend for each task?

Extract information from invoices and credit notes:

- Azure AI Search
- Azure Document Intelligence in Foundry Tools**
- Azure Machine Learning

Identify discussion topics in customer service call recordings:

- Azure AI Search
- Azure Document Intelligence in Foundry Tools**
- Azure Machine Learning

Detect customer sentiment and opinions:

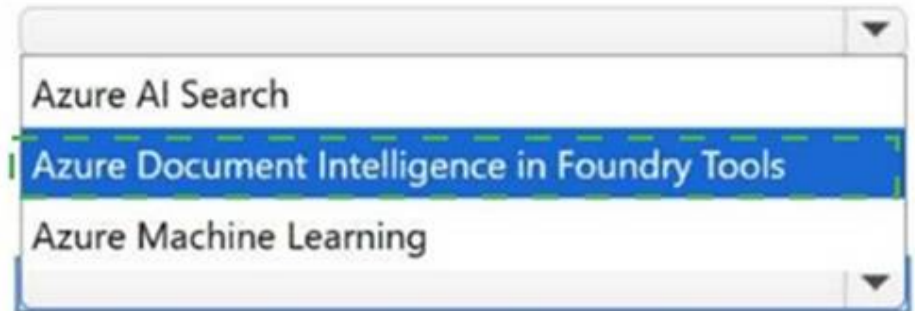

- Azure AI Search
- Azure Document Intelligence in Foundry Tools**
- Azure Machine Learning

- A. Mastered
- B. Not Mastered

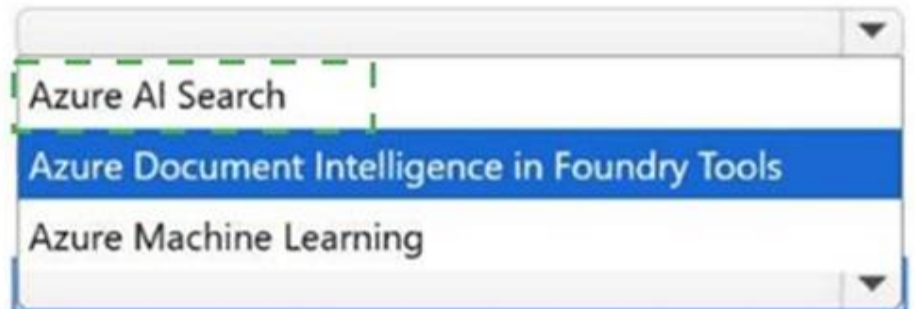

Answer: A

Explanation:

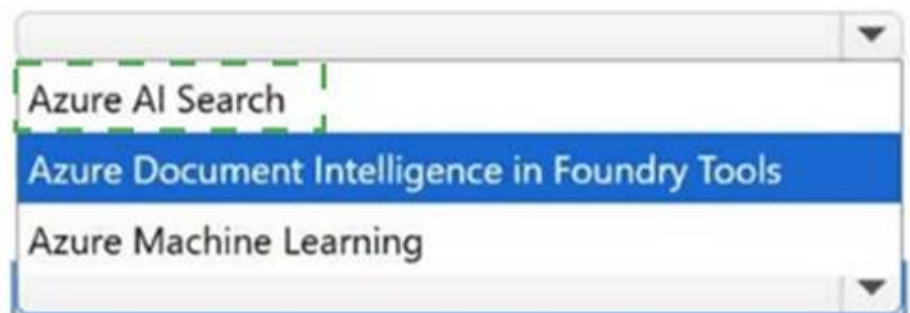

Extract information from invoices and credit notes:

Identify discussion topics in customer service call recordings:

Detect customer sentiment and opinions:

NEW QUESTION 42

Which business requirement most closely relates to grounding a generative AI model?

- A. supporting multiple languages
- B. measuring the number of user interactions per day
- C. enabling users to interact by using natural language queries
- D. ensuring that verified company data sources are used for response generation

Answer: D

NEW QUESTION 47

Your company is developing an AI-powered customer support agent. You need to ensure that the solution follows Microsoft responsible AI principles. Which two actions should you perform? Select the two BEST answers. Each correct answer presents part of the solution.

- A. Retain all customer conversations.
- B. Test the agent to ensure that responses are inclusive and culturally sensitive.
- C. Enable the agent to operate independently.
- D. Ensure that the agent can be used for multiple purposes.
- E. Provide a clear disclaimer that users are interacting with an AI solution.

Answer: BE

NEW QUESTION 48

Your company plans to use an AI-powered solution to analyze customer feedback for insights related to future product designs. You need to mitigate the privacy risks associated with the solution. What is the best approach to achieve the goal? Select the BEST answer.

- A. Anonymize the source data to remove customer Personally Identifiable Information (PII) from the feedback.
- B. Delete all the feedback data immediately after analysis.
- C. Ensure that feedback is attributable to the customer so that it can be deleted upon request.
- D. Limit privacy reviews to the final stage of the AI project lifecycle.

Answer: A

NEW QUESTION 53

Your company discovers that several employees use personal ChatGPT accounts to assist with work tasks. You are concerned about proprietary data being shared externally. You need to evaluate the business value of rolling out Microsoft 365 Copilot. Which capability is a key benefit of using Copilot instead of a personal ChatGPT account?

- A. analyzing and producing reports based on complex data
- B. generating ideas and solving issues
- C. drafting documents, emails, presentations, and marketing materials
- D. accessing internal data in accordance with existing Microsoft 365 policies

Answer: D

NEW QUESTION 58

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Allowing AI models to make autonomous decisions supports the Microsoft responsible AI principle of accountability.	<input type="radio"/>	<input type="radio"/>
Regularly testing AI models for fairness and inclusiveness helps ensure they align with Microsoft's Responsible AI principles.	<input type="radio"/>	<input type="radio"/>
Protecting user data and limiting access to personal information supports the Microsoft responsible AI principles of privacy and security.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Allowing AI models to make autonomous decisions supports the Microsoft responsible AI principle of accountability.	<input type="radio"/>	<input checked="" type="radio"/>
Regularly testing AI models for fairness and inclusiveness helps ensure they align with Microsoft's Responsible AI principles.	<input checked="" type="radio"/>	<input type="radio"/>
Protecting user data and limiting access to personal information supports the Microsoft responsible AI principles of privacy and security.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 61

Your company receives thousands of scanned invoices each month. You need to recommend an AI solution that can automatically extract key details, such as invoice numbers, vendor names, and total amounts. What is the best solution to recommend? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Azure Document Intelligence in Foundry Tools
- B. Azure Vision in Foundry Tools
- C. Azure AI Search
- D. Azure Machine Learning

Answer: A

NEW QUESTION 66

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Microsoft 365 Copilot can amplify existing data governance challenges.	<input type="radio"/>	<input type="radio"/>
Implementing Microsoft 365 Copilot reduces data management costs.	<input type="radio"/>	<input type="radio"/>
Microsoft 365 Copilot can help IT teams manage data risks.	<input type="radio"/>	<input type="radio"/>

- A. Mastered

B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Microsoft 365 Copilot can amplify existing data governance challenges.	<input checked="" type="radio"/>	<input type="radio"/>
Implementing Microsoft 365 Copilot reduces data management costs.	<input type="radio"/>	<input checked="" type="radio"/>
Microsoft 365 Copilot can help IT teams manage data risks.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 70

Your company purchases Microsoft 365 Copilot for its sales department. The sales department needs to find and summarize information across internal documents quickly. From which two data sources can the sales department obtain results by default? (Select TWO.)

- A. an on-premises file share
- B. a custom customer relationship management (CRM) system
- C. Microsoft SharePoint
- D. Microsoft OneDrive
- E. Microsoft Sway

Answer: CD

Explanation:

By default, Microsoft 365 Copilot is grounded in your organization's Microsoft 365 data through Microsoft Graph, and it respects the user's existing permissions. For finding and summarizing information across internal documents, the most direct default document repositories in Microsoft 365 are SharePoint (team sites and shared libraries) and OneDrive (a user's work files). That is why C (Microsoft SharePoint) and D (Microsoft OneDrive) are the correct selections. Microsoft explicitly describes Copilot as accessing organizational content via Microsoft Graph, including user documents and related work content. The other options are not by default sources. A (on-premises file share) is not automatically part of Microsoft Graph unless you integrate/migrate content or use connectors to make it discoverable in Microsoft 365 experiences. B (custom CRM) similarly requires an integration approach (for example, Microsoft 365 Copilot connectors / Graph connectors) to index and expose that data for Copilot to use. E (Microsoft Sway) is not a primary default content source for Copilot's document grounding and is not typically referenced as a core internal document repository compared to SharePoint/OneDrive. So, for immediate, out-of-the-box internal document discovery and summarization within Microsoft 365, SharePoint + OneDrive are the default answer.

NEW QUESTION 73

Which statement accurately describes the difference between a pretrained generative AI model and a fine-tuned generative AI model?

- A. A pretrained model requires labeled data, while a fine-tuned model does not.
- B. A pretrained model is faster to train than a fine-tuned model because the pretrained model uses fewer parameters.
- C. A pretrained model is trained on broad datasets, while a fine-tuned model is adapted to perform well on a narrower, domain-specific dataset.
- D. A pretrained model is optimized for a specific task, while a fine-tuned model is designed for general-purpose use.

Answer: C

Explanation:

A pretrained generative AI model is trained initially on a large, broad, and diverse dataset so it learns general language (or multimodal) patterns and capabilities. Fine-tuning then takes that pretrained base and performs additional training on a smaller, task- or domain-specific dataset to specialize behavior—improving performance for a particular use case, tone, style, or domain knowledge representation. That is exactly what option C states, making it the correct answer. Option A is incorrect because both pretraining and fine-tuning may use labeled or unlabeled data depending on the technique; the distinction is not labeled vs. unlabeled. Option B is incorrect because a pretrained model is not faster to train due to fewer parameters; pretraining is typically the most compute-intensive phase precisely because it's done at large scale, while fine-tuning is smaller but still trains the same model architecture. Option D is reversed: the pretrained model is the general-purpose foundation, while the fine-tuned model is the specialized variant for a specific task or dataset.

NEW QUESTION 78

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Microsoft Copilot in Outlook can automatically send follow-up replies to emails.	<input type="radio"/>	<input type="radio"/>
Microsoft Copilot in Outlook can identify and surface tasks mentioned in your emails.	<input type="radio"/>	<input type="radio"/>
Microsoft Copilot in Outlook can summarize long email threads and highlight action items and deadlines.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Microsoft Copilot in Outlook can automatically send follow-up replies to emails.	<input type="radio"/>	<input checked="" type="radio"/>
Microsoft Copilot in Outlook can identify and surface tasks mentioned in your emails.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft Copilot in Outlook can summarize long email threads and highlight action items and deadlines.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 82

HOTSPOT

- Select the answer that correctly completes the sentence. The Analyst agent in Microsoft 365 Copilot .

Answer Area

The Analyst agent in Microsoft 365 Copilot

compiles background research for a new market or initiative.

enables you to generate audio summaries of select references.

uses a conversational agent to answer employee FAQs.

uses structured data and provides insights by using text, charts, tables, and other visuals.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

The Analyst agent in Microsoft 365 Copilot

compiles background research for a new market or initiative.

enables you to generate audio summaries of select references.

uses a conversational agent to answer employee FAQs.

uses structured data and provides insights by using text, charts, tables, and other visuals.

NEW QUESTION 87

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Answer Area

Statements	Yes	No
A generative AI model guarantees factually accurate responses if the model is trained on a large dataset.	<input type="radio"/>	<input type="radio"/>
Content filtering and responsible AI safeguards help a generative AI model generate safe and inoffensive content.	<input type="radio"/>	<input type="radio"/>
A generative AI model always produces fair and unbiased results when the training data has been properly prepared and reviewed for fairness.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
A generative AI model guarantees factually accurate responses if the model is trained on a large dataset.	<input type="radio"/>	<input checked="" type="radio"/>
Content filtering and responsible AI safeguards help a generative AI model generate safe and inoffensive content.	<input checked="" type="radio"/>	<input type="radio"/>
A generative AI model always produces fair and unbiased results when the training data has been properly prepared and reviewed for fairness.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION 91

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Retrieval Augmented Generation (RAG) requires model fine-tuning.	<input type="radio"/>	<input type="radio"/>
Retrieval Augmented Generation (RAG) is helpful when you need a generative AI solution that can access current, verifiable information.	<input type="radio"/>	<input type="radio"/>
Retrieval Augmented Generation (RAG) enables you to get more relevant responses based on your organization's documents without retraining the base model.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Retrieval Augmented Generation (RAG) requires model fine-tuning.	<input type="radio"/>	<input checked="" type="radio"/>
Retrieval Augmented Generation (RAG) is helpful when you need a generative AI solution that can access current, verifiable information.	<input checked="" type="radio"/>	<input type="radio"/>
Retrieval Augmented Generation (RAG) enables you to get more relevant responses based on your organization's documents without retraining the base model.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 96

Your company plans to use generative AI to help summarize and analyze internal business documents. You need to recommend a solution to prevent generative AI from accessing confidential or classified information. What should you include in the recommendation?

- A. an information barrier (IB) policy
- B. data governance
- C. a data retention policy
- D. communication monitoring

Answer: B

NEW QUESTION 98

HOTSPOT

Select the answer that correctly completes the sentence.

When a generative AI model produces output that seems realistic but contains incorrect information, the behavior is known as .

Answer Area

When a generative AI model produces output that seems realistic but contains incorrect information, the behavior is known as

▼

data leakage.

model inaccuracy.

overreliance.

prompt injection.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

When a generative AI model produces output that seems realistic but contains incorrect information, the behavior is known as

▼

data leakage.

model inaccuracy. |

overreliance.

prompt injection.

NEW QUESTION 103

Your company is building a portfolio of AI-powered business solutions. Company executives want to understand how Microsoft responsible AI principles can support the company's long-term goals. Which benefit best demonstrates the importance of responsible AI? Select the BEST answer.

- A. guarantees that AI models provide accurate and relevant responses
- B. reduces the need for data protection policies and governance
- C. enhances stakeholder trust and fosters sustainable AI adoption throughout the organization
- D. reduces the need for executive oversight in AI decision-making

Answer: C

NEW QUESTION 106

HOTSPOT

HOTSPOT - For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements

You can use Azure Language in Foundry Tools to analyze the sentiment of customer reviews.

Yes **No**

You can use Azure Language in Foundry Tools to translate internal reports into multiple languages.

You can use Azure Language in Foundry Tools to extract text from scanned documents.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements

	Yes	No
You can use Azure Language in Foundry Tools to analyze the sentiment of customer reviews.	<input checked="" type="radio"/>	<input type="radio"/>
You can use Azure Language in Foundry Tools to translate internal reports into multiple languages.	<input type="radio"/>	<input checked="" type="radio"/>
You can use Azure Language in Foundry Tools to extract text from scanned documents.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION 111

HOTSPOT

HOTSPOT - For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements

	Yes	No
Larger datasets can increase the cost of a generative AI solution that uses an Azure Machine Learning workspace.	<input type="radio"/>	<input type="radio"/>
The cost of consuming Azure OpenAI models is primarily identified by the number of input and output tokens processed.	<input type="radio"/>	<input type="radio"/>
The cost of custom generative AI solutions always remains the same regardless of the model version or capability used.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements

	Yes	No
Larger datasets can increase the cost of a generative AI solution that uses an Azure Machine Learning workspace.	<input checked="" type="radio"/>	<input type="radio"/>
The cost of consuming Azure OpenAI models is primarily identified by the number of input and output tokens processed.	<input checked="" type="radio"/>	<input type="radio"/>
The cost of custom generative AI solutions always remains the same regardless of the model version or capability used.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION 112

DRAG DROP

Match the business scenario to the appropriate AI solution design approach. Each solution may be used once, more than once, or not at all.

AI Solutions

- Build with Azure Machine Learning
- Build with Microsoft Copilot Studio
- Extend with Microsoft 365 Copilot connectors
- Use Microsoft 365 Copilot

Answer Area

- AI Solution: The marketing department at your company wants AI to summarize emails and create presentations.
- AI Solution: The HR department at your company wants a conversational agent for policy questions and leave requests.
- AI Solution: The manufacturing department at your company wants AI to predict maintenance schedules.
- AI Solution: The finance department at your company wants AI-powered access to enterprise resource planning (ERP) data by using familiar productivity tools.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

The marketing department at your company wants AI to summarize emails and create presentations. Answer: Use Microsoft 365 Copilot

The HR department at your company wants a conversational agent for policy questions and leave requests. Answer: Build with Microsoft Copilot Studio

The manufacturing department at your company wants AI to predict maintenance schedules. Answer: Build with Azure Machine Learning

The finance department at your company wants AI-powered access to enterprise resource planning ERP data by using familiar productivity tools. Answer: Extend with Microsoft 365 Copilot connectors

These scenarios map to four distinct solution patterns: out-of-the-box productivity assistance, low-code conversational agents, predictive ML, and enterprise data integration.

Marketing's need to summarize emails and create presentations is a core productivity copilot use case. Microsoft 365 Copilot is embedded in Outlook, Word, PowerPoint, and Teams, so it directly supports summarization, drafting, and presentation generation without building a custom solution—making Use Microsoft 365 Copilot the best fit.

HR's requirement is a conversational agent tailored to internal policies and workflows such as leave requests. That typically needs custom dialog, grounded knowledge sources, and possibly actions/workflows. Microsoft Copilot Studio is designed to build and manage such agents with organizational knowledge and business process integration, so Build with Microsoft Copilot Studio fits best.

Manufacturing's predictive maintenance scheduling is classic predictive analytics: learning patterns from historical telemetry/maintenance data to forecast failures or optimal service windows. This is best addressed with Azure Machine Learning, which supports training, evaluating, and deploying custom predictive models.

Finance wants AI-powered access to ERP data using familiar productivity tools, which implies bringing external line-of-business data into the Microsoft 365 Copilot experience. That is precisely where Microsoft 365 Copilot connectors help—indexing and exposing enterprise data sources so Copilot can reference them in a governed way—so Extend with Microsoft 365 Copilot connectors is the best approach.
