AI Transformation Leader (beta)

<https://www.certleader.com/AB-731-dumps.html>

NEW QUESTION 1

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
A generative AI solution is well-suited to predict next-quarter sales trends.	☐	☐
A generative AI solution can summarize lengthy policy documents.	☐	☐
A generative AI solution can create product descriptions from product specifications.	☐	☐

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
A generative AI solution is well-suited to predict next-quarter sales trends.	☐	☒
A generative AI solution can summarize lengthy policy documents.	☒	☐
A generative AI solution can create product descriptions from product specifications.	☒	☐

NEW QUESTION 2

HOTSPOT

- Select the answer that correctly completes the sentence.

To ensure that your organization follows trustworthy AI principles, the organization should establish an AI governance council to .

Answer Area

To ensure that your organization follows trustworthy AI principles, the organization should
establish an AI governance council to

- configure and deploy AI models in the organization's Azure environment.
- guide AI strategy, ensure responsible AI oversight, and promote alignment across business units.
- manage day-to-day model training and labeling tasks for AI development teams.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

To ensure that your organization follows trustworthy AI principles, the organization should
establish an AI governance council to

- configure and deploy AI models in the organization's Azure environment.
- guide AI strategy, ensure responsible AI oversight, and promote alignment across business units.
- manage day-to-day model training and labeling tasks for AI development teams.

NEW QUESTION 3

You plan to meet with stakeholders to discuss how generative AI can benefit your company. You need to provide a relevant description of generative AI. Which description should you use?

- A. Generative AI is designed to generate responses based on a user's natural language prompts.
- B. Generative AI is designed to translate documents into other languages.
- C. Generative AI is designed to predict future trends based on historical data.
- D. Generative AI is designed to recommend products based on user behavior.

Answer: A

NEW QUESTION 4

Your company sells hiking and camping gear online. You need a generative AI solution that can interact with customers and ask questions about their needs. What should you include in the solution?

- A. a chatbot
- B. predictive AI
- C. computer vision
- D. a recommendation engine

Answer: A

NEW QUESTION 5

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Prompt engineering changes how a generative AI model was trained.	☐	☐
Prompt engineering focuses on designing clear, concise, and context-rich instructions.	☐	☐
Effective prompt engineering involves maximizing the number of tokens used in each request.	☐	☐

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Prompt engineering changes how a generative AI model was trained.	☐	☒
Prompt engineering focuses on designing clear, concise, and context-rich instructions.	☒	☐
Effective prompt engineering involves maximizing the number of tokens used in each request.	☐	☒

NEW QUESTION 6

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
A manufacturer can use Azure Vision in Foundry Tools to identify product defects on an assembly line.	☐	☐
A logistics company can use Azure Vision in Foundry Tools to recognize package shipping labels.	☐	☐
The HR department at your company can only use Azure Vision in Foundry Tools to extract written content from Microsoft Word files.	☐	☐

A. Mastered

B. Not Mastered

Answer: A

Explanation:
Answer Area

Statements	Yes	No
A manufacturer can use Azure Vision in Foundry Tools to identify product defects on an assembly line.	☒	☐
A logistics company can use Azure Vision in Foundry Tools to recognize package shipping labels.	☒	☐
The HR department at your company can only use Azure Vision in Foundry Tools to extract written content from Microsoft Word files.	☐	☒

NEW QUESTION 7

Your company creates a custom Azure Machine Learning model that uses a generative AI assistant. The model initially delivers strong results. However, six months later, the model predictions become noticeably less accurate. What is a possible cause of the issue?

- A. The input data changed over time.
- B. The model requires additional compute resources.
- C. The model was trained incorrectly.

Answer: A

NEW QUESTION 8

HOTSPOT

HOTSPOT - Select the answer that correctly completes the sentence.

You use _____ to train a model that will forecast product demand based on historical sales data.

You use

Azure Machine Learning

Azure AI Search

Azure OpenAI

Microsoft Foundry

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

You use

Azure Machine Learning

Azure AI Search

Azure OpenAI

Microsoft Foundry

 to train a model that will forecast product demand based on historical sales data.

NEW QUESTION 9

Your company uses a generative AI solution. You need to improve the quality of responses by using grounding. Which statement accurately describes how grounding improves accuracy and relevancy?

- A. references a diverse set of people, disciplines, and perspectives
- B. explains how and why AI models generate content
- C. anchors the responses in specific data sources
- D. specifies the strengths and weaknesses of the AI model

Answer: C

NEW QUESTION 10

Your company plans to build a generative AI solution based on internal data. You recommend using Microsoft Foundry as a starting point to develop and manage

the solution. What is a key benefit of using Microsoft Foundry for this project?

- A. Provides a scalable platform for developing and deploying generative AI solutions.
- B. Removes the need to select or configure the underlying AI model.
- C. Enables business users to build generative AI solutions.
- D. Offers a low-code platform for developing generative AI solutions.

Answer: A

NEW QUESTION 10

HOTSPOT

Select the answer that correctly completes the sentence. The Researcher agent in Microsoft 365 Copilot .

Answer Area

The Researcher agent in Microsoft 365 Copilot

creates visual dashboards from structured data in Microsoft Excel and Power BI.
generates a pivot table and performs time series forecasting.
performs complex, multi-step, data analysis and code execution tasks over arbitrary datasets.
uses reasoning capabilities to generate deep insights based on organizational data and the web.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

The Researcher agent in Microsoft 365 Copilot

creates visual dashboards from structured data in Microsoft Excel and Power BI.
generates a pivot table and performs time series forecasting.
performs complex, multi-step, data analysis and code execution tasks over arbitrary datasets.
uses reasoning capabilities to generate deep insights based on organizational data and the web.

NEW QUESTION 13

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements

Yes

No

Microsoft 365 Copilot connectors enable you to index data from multiple sources to make the data available in Copilot.

You can build a custom Microsoft 365 Copilot connector when the available connectors do NOT meet your data integration requirements.

To use Microsoft 365 Copilot connectors, you need a Microsoft Copilot Studio license.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements

Yes

No

Microsoft 365 Copilot connectors enable you to index data from multiple sources to make the data available in Copilot.

You can build a custom Microsoft 365 Copilot connector when the available connectors do NOT meet your data integration requirements.

To use Microsoft 365 Copilot connectors, you need a Microsoft Copilot Studio license.

NEW QUESTION 14

HOTSPOT

- What should you use for each task? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Extracting structured data from forms and invoices:

Azure Language in Foundry Tools
Azure Document Intelligence in Foundry Tools
Azure Vision in Foundry Tools

Summarizing written content from business reports:

Azure Language in Foundry Tools
Azure Document Intelligence in Foundry Tools
Azure Vision in Foundry Tools

Generating descriptive text for uploaded images:

Azure Language in Foundry Tools
Azure Document Intelligence in Foundry Tools
Azure Vision in Foundry Tools

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Extracting structured data from forms and invoices: Answer: Azure Document Intelligence in Foundry Tools

Summarizing written content from business reports: Answer: Azure Language in Foundry Tools

Generating descriptive text for uploaded images: Answer: Azure Vision in Foundry Tools

These three tasks align to three different Azure AI capability families: document processing, language understanding/generation, and computer vision.

Forms and invoices are semi-structured documents where the business need is to extract specific fields (IDs, names, totals, dates) reliably into structured output. Azure Document Intelligence is designed for intelligent document processing and includes prebuilt models (such as invoices) as well as custom extraction options, making it the correct choice for structured data extraction from documents.

Summarizing written business reports is an NLP task focused on compressing long text into key points, themes, and action items. Azure Language provides language processing capabilities (including summarization features within language service capabilities), so it is the best fit for summarization scenarios.

Generating descriptive text for images (image captioning/description) is a computer vision task. Azure Vision can analyze uploaded images and return descriptions/captions and other visual insights, which directly matches the requirement to produce descriptive text from images.

NEW QUESTION 17

Your company plans to use generative AI to help build a website that will showcase various existing products. Which capability best describes a benefit of using generative AI for this project? Select the BEST answer.

- A. translating product descriptions into a different language
- B. analyzing product sales to identify patterns and trends
- C. designing a new product based on customer requirements
- D. creating product descriptions based on product specifications

Answer: D

NEW QUESTION 22

In which scenario is Azure Machine Learning most likely to deliver strategic value for an organization?

- A. Using historical sales data to forecast demand across product categories.
- B. Digitizing a paper-based process to reduce errors.
- C. Entering customer feedback into a spreadsheet to understand sentiment.
- D. Sending personalized emails to customers based on the customer location.

Answer: A

NEW QUESTION 26

Your company is developing an AI-powered customer support agent. You need to ensure that the solution follows Microsoft responsible AI principles. Which two actions should you perform? Select the two BEST answers. Each correct answer presents part of the solution.

- A. Retain all customer conversations.

- B. Test the agent to ensure that responses are inclusive and culturally sensitive.
- C. Enable the agent to operate independently.
- D. Ensure that the agent can be used for multiple purposes.
- E. Provide a clear disclaimer that users are interacting with an AI solution.

Answer: BE

NEW QUESTION 30

HOTSPOT

- Select the answer that correctly completes the sentence.

An organization that runs continuous, large-scale workloads with Azure OpenAI models should choose the pricing model.

Answer Area

An organization that runs continuous, large-scale workloads with Azure OpenAI models should choose the  pricing model.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

An organization that runs continuous, large-scale workloads with Azure OpenAI models should choose the  pricing model.

NEW QUESTION 33

You need to create a custom Azure Machine Learning model. The data used to train the model is consistent and uniform. What should you do first?

- A. Prepare the training data.
- B. Evaluate the model.
- C. Train the model.
- D. Tune hyperparameters.
- E. Deploy the model.

Answer: A

Explanation:

Even when training data is already consistent and uniform, the first step in building a custom Azure Machine Learning model is still to prepare the training data. ??Consistent?? data reduces the amount of cleaning you may need, but preparation is broader than cleaning: you still must confirm the schema, validate data types, handle missing values (if any), ensure label quality (for supervised learning), select/engineer features, and split data into training/validation/test sets. Those actions determine whether training will be stable and whether evaluation metrics will be meaningful.

If you skip preparation and go directly to training (C), the model might learn from the wrong columns, inconsistent labels, or poorly partitioned data, producing misleading results. Evaluation (B) comes after training because you need a trained model to score and measure. Hyperparameter tuning (D) is an optimization activity that presupposes you already have a working training pipeline and a baseline model to improve. Deployment (E) is last, after you have validated performance and selected the model candidate.

Azure Machine Learning commonly operationalizes these steps through pipelines, where data preparation is a foundational stage that precedes training and evaluation (and can also be iterated as you refine features and quality).

NEW QUESTION 35

Your company purchases Microsoft 365 Copilot for its sales department. The sales department needs to find and summarize information across internal documents quickly. From which two data sources can the sales department obtain results by default? (Select TWO.)

- A. an on-premises file share
- B. a custom customer relationship management (CRM) system
- C. Microsoft SharePoint
- D. Microsoft OneDrive
- E. Microsoft Sway

Answer: CD

Explanation:

By default, Microsoft 365 Copilot is grounded in your organization??sMicrosoft 365 datathroughMicrosoft Graph, and it respects the user??s existing permissions. For ??find and summarize information across internal documents,?? the most direct default document repositories in Microsoft 365 areSharePoint(team sites and shared libraries) andOneDrive(a user??s work files). That is whyC (Microsoft SharePoint)andD (Microsoft OneDrive)are the correct selections. Microsoft explicitly describes Copilot as accessing organizational content via Microsoft Graph, including user documents and related work content.

The other options are not ??by default?? sources.A (on-premises file share)is not automatically part of Microsoft Graph unless you integrate/migrate content or use connectors to make it discoverable in Microsoft 365 experiences.B (custom CRM)similarly requires an integration approach (for example, Microsoft 365 Copilot connectors / Graph connectors) to index and expose that data for Copilot to use.E (Microsoft Sway)is not a primary default content source for Copilot??s document grounding and is not typically referenced as a core internal document repository compared to SharePoint/OneDrive. So, for immediate, out-of-the-box internal document discovery and summarization within Microsoft 365,SharePoint + OneDriveare the default answer.

NEW QUESTION 36

Which statement accurately describes the difference between a pretrained generative AI model and a fine-tuned generative AI model?

- A. A pretrained model requires labeled data, while a fine-tuned model does not.
- B. A pretrained model is faster to train than a fine-tuned model because the pretrained model uses fewer parameters.
- C. A pretrained model is trained on broad datasets, while a fine-tuned model is adapted to perform well on a narrower, domain-specific dataset.
- D. A pretrained model is optimized for a specific task, while a fine-tuned model is designed for general-purpose use.

Answer: C

Explanation:

Apretrainedgenerative AI model is trained initially on a large, broad, and diverse datasetso it learns general language (or multimodal) patterns and capabilities.Fine-tuningthen takes that pretrained base and performs additional training on a smaller, task- or domain-specific datasetto specialize behavior—improving performance for a particular use case, tone, style, or domain knowledge representation. That is exactly what optionCstates, making it the correct answer. OptionAis incorrect because both pretraining and fine-tuning may use labeled or unlabeled data depending on the technique; the distinction is not ??labeled vs. unlabeled.?? OptionBis incorrect because a pretrained model is not ??faster to train?? due to fewer parameters; pretraining is typically the most compute-intensive phase precisely because it??s done at large scale, while fine-tuning is smaller but still trains the same model architecture. OptionDis reversed: the pretrained model is the general-purpose foundation, while the fine-tuned model is the specialized variant for a specific task or dataset.

NEW QUESTION 38

Your company is deploying Microsoft 365 Copilot. The deployment must provide users with access to the Researcher agent to search across data in Microsoft SharePoint. You need to recommend a licensing plan for the solution. What should you recommend?

- A. pay-as-you-go
- B. a Microsoft 365 subscription entitlement
- C. a Microsoft 365 Copilot per-user add-on license
- D. a usage-based consumption license in Azure

Answer: C

NEW QUESTION 41

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area		
Statements	Yes	No
Microsoft Copilot in Outlook can automatically send follow-up replies to emails.	☐	☐
Microsoft Copilot in Outlook can identify and surface tasks mentioned in your emails.	☐	☐
Microsoft Copilot in Outlook can summarize long email threads and highlight action items and deadlines.	☐	☐

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area		
Statements	Yes	No
Microsoft Copilot in Outlook can automatically send follow-up replies to emails.	☐	☒
Microsoft Copilot in Outlook can identify and surface tasks mentioned in your emails.	☒	☐
Microsoft Copilot in Outlook can summarize long email threads and highlight action items and deadlines.	☒	☐

NEW QUESTION 44

HOTSPOT

- Select the answer that correctly completes the sentence. The Analyst agent in Microsoft 365 Copilot .

Answer Area

The Analyst agent in Microsoft 365 Copilot

compiles background research for a new market or initiative.
enables you to generate audio summaries of select references.
uses a conversational agent to answer employee FAQs.
uses structured data and provides insights by using text, charts, tables, and other visuals.

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

The Analyst agent in Microsoft 365 Copilot

compiles background research for a new market or initiative.
enables you to generate audio summaries of select references.
uses a conversational agent to answer employee FAQs.
uses structured data and provides insights by using text, charts, tables, and other visuals.

NEW QUESTION 45

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Retrieval Augmented Generation (RAG) requires model fine-tuning.	☐	☐
Retrieval Augmented Generation (RAG) is helpful when you need a generative AI solution that can access current, verifiable information.	☐	☐
Retrieval Augmented Generation (RAG) enables you to get more relevant responses based on your organization’s documents without retraining the base model.	☐	☐

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Retrieval Augmented Generation (RAG) requires model fine-tuning.	☐	☒
Retrieval Augmented Generation (RAG) is helpful when you need a generative AI solution that can access current, verifiable information.	☒	☐
Retrieval Augmented Generation (RAG) enables you to get more relevant responses based on your organization’s documents without retraining the base model.	☒	☐

NEW QUESTION 46

Your company manages a website that publishes daily news articles. You need to recommend an AI solution that can analyze text and identify the main people, locations, and companies mentioned in the articles. What should you include in the recommendation?

- A. Azure Language in Foundry Tools
B. Content Safety in Foundry Control Plane

- C. Azure Vision in Foundry Tools
D. Azure Speech in Foundry Tools

Answer: A

Explanation:

The requirement is to analyzetextand identify ??people, locations, and companies?? mentioned in news articles. This is a classicNamed Entity Recognition (NER)/ entity extraction scenario, which falls under natural language processing.Azure Language in Foundry Toolsis the correct choice because it provides text analytics capabilities that detect and categorize entities in unstructured text—commonly includingPerson,Location, andOrganization. This enables downstream experiences such as topic tagging, search filters (e.g., ??all articles mentioning Company X??), trend dashboards (top people/places mentioned this week), and improved content discovery.

The other options do not match the requirement.Content Safetyfocuses on moderating harmful or policy-violating content (for example, hate, violence, self-harm, sexual content) and is not the primary tool for extracting named entities.Azure Visionis for analyzing images and performing OCR; it would only be relevant if the articles were images or scans, but the task here is entity extraction from text articles.Azure Speechis for speech-to-text, text-to-speech, and audio analysis; it would be used if your input were audio recordings rather than written articles.

Therefore, to identify key entities (people, locations, companies) from daily news article text, the best recommendation isAzure Language in Foundry Tools.

NEW QUESTION 48

Your company plans to use generative AI to help summarize and analyze internal business documents. You need to recommend a solution to prevent generative AI from accessing confidential or classified information. What should you include in the recommendation?

- A. an information barrier (IB) policy
B. data governance
C. a data retention policy
D. communication monitoring

Answer: B

NEW QUESTION 51

HOTSPOT

HOTSPOT - For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
You can use Azure Language in Foundry Tools to analyze the sentiment of customer reviews.	☐	☐
You can use Azure Language in Foundry Tools to translate internal reports into multiple languages.	☐	☐
You can use Azure Language in Foundry Tools to extract text from scanned documents.	☐	☐

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
You can use Azure Language in Foundry Tools to analyze the sentiment of customer reviews.	☒	☐
You can use Azure Language in Foundry Tools to translate internal reports into multiple languages.	☐	☒
You can use Azure Language in Foundry Tools to extract text from scanned documents.	☐	☒
