

Exam Questions 70-346

Managing Office 365 Identities and Requirements

<https://www.2passeasy.com/dumps/70-346/>

NEW QUESTION 1

- (Exam Topic 1)

You administer the Office 365 environment for a company that has offices around the world. All of the offices use the same Office 365 tenant. You need to ensure that all users can access the services that are available in their regions. Which setting or service should you update?

- A. User location settings
- B. User licenses
- C. Service usage address
- D. Rights management

Answer: A

Explanation:

The User Location settings will allow you to set sign-in status and user locations for all the users that are on your network notwithstanding the physical location where they find themselves.

References:

<http://blogs.perficient.com/microsoft/2014/11/office-365-assign-licensing-user-location-via-active-directory/>

NEW QUESTION 2

- (Exam Topic 2)

Your company has an Office 365 subscription. You create a new retention policy that contains several retention tags. A user named Test5 has a client computer that runs Microsoft Office Outlook 2007. You install Microsoft Outlook 2010 on the client computer of Test5. Test5 reports that the new retention tags are unavailable from Outlook 2010.

You verify that other users can use the new retention tags. You need to ensure that the new retention tags are available to Test5 from Outlook 2010. What should you do?

- A. Instruct Test5 to repair the Outlook profile.
- B. Modify the retention policy tags.
- C. Run the Set-Mailbox cmdlet.
- D. Force directory synchronization.

Answer: A

Explanation:

When deploying retention policies it is part of the procedure to create the tags and add it to the retention policies prior to the deployment. Also part of the procedure is to determine which Microsoft Outlook client versions are in use. In this case the Test5 version has been changed and Test5 will then have to repair his/her Outlook profile accordingly.

NEW QUESTION 3

- (Exam Topic 2)

A company plans to deploy an Office 365 tenant. You have the following requirements:

- Administrators must be able to access the Office 365 admin center.
- Microsoft Exchange Online must be used as a Simple Mail Transfer Protocol (SMTP) relay for a line-of-business application that sends email messages to remote domains.
- All users must be able to use the audio and video capabilities in Microsoft Skype for Business. You need to configure the ports for the firewall. Which port should you use for each application? Select the correct answer from each list in the answer area.

Answer Area

Applications	Port or ports
SMTP relay	TCP 25 TCP 443 TCP 587
Office 365 admin center	TCP 80 TCP 443 TCP 10106
Skype (outbound video sessions)	RTP/UDP 50000-50019 RTP/UDP 50020-50039 UDP 50040-50059
Skype (outbound audio sessions)	RTP/UDP 50000-50019 RTP/UDP 50020-50039 UDP 50040-50059

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Transport Control Protocol(TCP), User Datagram Protocol (UDP) ports, and Protocol Numbers are important to TCP/IP networking, intranets, and the Internet. Ports and protocol numbers provide access to a host computer. However, they also create a security hazard by allowing uninvited access. Therefore, knowing which port to allow or disable increases a network's security. If the wrong ports or protocol numbers are disabled on a firewall, router, or proxy server as a security measure, essential services might become unavailable. TCP port 25 is used for simple mail transfer protocol which is used to e-mail routing between mail servers. TCP port 443 is used for Audio, video and application sharing sessions as well as data sharing sessions. RTP/UDP port 50020-50039 must be used for outbound video sessions. RTP/UDP port 50000-50019 must be used for outbound audio sessions.

NEW QUESTION 4

- (Exam Topic 2)

Your company has a subscription to Office 365 for midsize business and enterprises. The company uses Microsoft Skype for Business Online. You need to open ports on the network firewall to enable all of the features of Skype for Business Online. Which port or ports should you open? (Each correct answer presents part of the solution. Choose all that apply.)

- A. inbound TCP443
- B. outbound TCP 5061
- C. outbound UDP 3478
- D. outbound TCP 443
- E. outbound UDP 50000 to outbound UDP 59999
- F. inbound TCP 8080

Answer: ACDE

Explanation:

A: inbound TCP 443 is the port for the Skype for Business for Business client service.
 C: outbound UDP 3478 is the UDP port for Skype for Business audio and video sessions.
 D: outbound TCP 443 is the port for the Skype for Business data sharing sessions as well as the Video and Audio and application sharing sessions.
 E: outbound UDP 50000 to outbound UDP 59999 is the port for Skype for Business audio and video sessions. References:
<https://adam-hand.com/cloud-technologies/firewall-ports-for-office-365/>

NEW QUESTION 5

- (Exam Topic 2)

A company deploys an Office 365 tenant. All employees use Skype for Business Online. You need to configure the network firewall to support Skype for Business Online.

Which ports must you open? To answer, drag the appropriate port number to the correct feature or features. Each port number may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer Area

	Online Feature	Firewall Port
443	Audio, video, and application sharing sessions	<input type="text"/>
3478		<input type="text"/>
5223	Skype mobile push notifications	<input type="text"/>
80		<input type="text"/>
389		<input type="text"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Transport Control Protocol(TCP), User Datagram Protocol(UDP) ports, and Protocol Numbers are important to TCP/IP networking, intranets, and the Internet. Ports and protocol numbers provide access to a host computer. However, they also create a security hazard by allowing uninvited access. Therefore, knowing which port to allow or disable increases a network's security. If the wrong ports or protocol numbers are disabled on a firewall, router, or proxy server as a security measure, essential services might become unavailable.

Port 443 is used for Audio, video and application sharing sessions as well as data sharing sessions - For HTTPS.

Port 5223 is used for mobile push notifications - Extensible Messaging and Presence Protocol (XMPP) client connection over SSL.

NEW QUESTION 6

- (Exam Topic 2)

You implement Office 365 for an organization.

You must create the correct DNS entries needed to configure Exchange Online.

Which DNS entries should you create? To answer, drag the appropriate DNS record type to the correct purpose. Each DNS record type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer Area

	Purpose	DNS Record Type
A	Helps prevent outbound email messages from being flagged as spam	<input type="text"/>
CNAME		<input type="text"/>
MX		<input type="text"/>
SRV	Configures email message routing	<input type="text"/>
TXT	Outlook autodiscover record is used to help users easily configure their desktop clients	<input type="text"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

TXT record is used for verification. When you have added the record at your domain registrar's site, you'll go back to Office 365 and request Office 365 to look for the record. When Office 365 finds the correct TXT record, your domain is verified.

MX (mail exchanger) record points to where your email should be sent. It also has a priority field so that you can send mail to different servers in a priority order.

CNAME (alias or canonical) record redirects one domain to another in the DNS system. When a name server looks up a domain and finds that it has a CNAME record, the server replaces the first domain name with the CNAME, and then looks up the new name.

NEW QUESTION 7

- (Exam Topic 2)

You manage a team of three administrators for an organization that uses Office 365.

You must assign roles for each of the administrators as shown in the table. You must assign the minimum permissions required to perform the assigned tasks.

User	Requirements
Admin1	Reset user passwords for administrators
Admin2	Perform purchasing operations
Admin3	Create and manage user views

You need to assign the correct role to each administrator.

Which administrative role should you configure for each user? Select the correct answer from each list in the answer area.

User	Role
Admin1	<input type="text"/>
Admin2	<input type="text"/>
Admin3	<input type="text"/>

User	Role
Admin1	<input type="text"/>
Admin2	<input type="text"/>
Admin3	<input type="text"/>

User	Role
Admin1	<input type="text"/> billing administrator global administrator user management administrator
Admin2	<input type="text"/> billing administrator global administrator user management administrator
Admin3	<input type="text"/> billing administrator global administrator user management administrator

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Admin1 must be the global admin that will grant him/her access to all administrative features. Global admins are the only admins who can assign other admin roles. You can have more than one global admin in your organization. The person who signs up to purchase Office 365 becomes a global admin.

Admin2 must be the billing admin to enable him/her to make purchases, manage subscriptions, and monitor service health.

Admin 3 must be the User Management admin to allow him/her to reset passwords, monitor service health, and manage user accounts, user groups, and service requests. The user management admin can't delete a global admin, create other admin roles, or reset passwords for billing, global, and service admins.

References:

- <https://support.office.com/en-IN/article/assigning-admin-roles-d58b8089-cbfd-41ec-b64c-9cfcbe495ac>
- http://onlinehelp.microsoft.com/en-in/office365-enterprises/gg243432.aspx#bkmk_EditProfile

NEW QUESTION 8

- (Exam Topic 3)

You are the Office 365 administrator for your company. Your company uses Office 365 for collaboration. You must reset the password for all of the employees in your company.

You need to ensure that all employees create a new password the next time they sign in to Office 365. How should you complete the relevant Windows PowerShell command? To answer, drag the appropriate Windows PowerShell segment to the correct location or locations. Each Windows PowerShell segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: -MsolUserPassword
 The Set-MsolUserPassword cmdlet is used to change the password of a user. Box 2: -NewPassword Pass#123#
 The Set-MsolUserPassword -NewPassword <string> sets the new password for the user.

NEW QUESTION 9

- (Exam Topic 3)

A company deploys an Office 365 tenant. All employees in the human resources (HR) department must use multi-factor authentication. They must use only the Microsoft Outlook client to access their email messages. User1 joins the HR department. You need to help User1 configure his account. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Enable multi-factor authentication for User1.
 Box 2: Instruct User1 to use a mobile phone to complete the registration process. Box 3: Instruct User1 to create an app password.
 (Step 1) First we need to enable multi-factor authentication for this Office 365 users.
 (Step 2) After being enrolled for multi-factor authentication, the next time a user signs in, they see a message asking them to set up their second authentication factor.
 Any of the following may be used for the second factor of authentication: Mobile Phone Call, Mobile Phone Text Message, Office Phone Call, or Mobile App.
 (Step 3) Configure app passwords for non-browser apps (such as ...Outlook etc.).
 User1 should create an app password. The app password should then be used to set up Microsoft Outlook.

After the registration process (step 2) has been completed, users can setup application passwords for non-browser apps (such as ...Outlook etc.). This is required because the non-browser apps (such as ...Outlook etc.) do not support multi-factor authentication and you will be unable to use them unless an app password is configured.

References:

<http://msdn.microsoft.com/en-us/library/azure/dn383636.aspx#enablemfaoffice365>

NEW QUESTION 10

- (Exam Topic 3)

You use a centralized identity management system as a source of authority for user account information. You export a list of new user accounts to a file on a daily basis. Your company uses a local Active Directory for storing user accounts for on-premises solutions. You are configuring the Windows Azure Active Directory Sync tool.

New user accounts must be created in both the local Active Directory and Office 365. You must import user account data into Office 365 daily.

You need to import the new users. What should you do?

- A. Use the Office 365 admin center to import the file.
- B. Create a Windows PowerShell script to import account data from the file into Active Directory.
- C. Use the Windows Azure Management Portal to import the file.
- D. Create a Windows PowerShell script that uses the MSOnline module to import account data from the file.

Answer: B

Explanation:

To force a sync with the Windows Azure Active Directory Sync tool:

- ▶ Open Powershell (as admin)
- ▶ Type Import-Module DirSync
- ▶ Then Type Start-OnlineCoExistenceSync

To simplify further you can write the commands as a PowerShell script.

NEW QUESTION 10

- (Exam Topic 3)

Your company uses Office 365. You need to identify which users do NOT have a Microsoft Exchange Online license assigned to their user account.

Which Windows PowerShell cmdlet should you use?

- A. Get-ManagementRoleAssignment
- B. Get-User
- C. Get-RoleGroupMember
- D. Get-LogonStatistics
- E. Get-RemovedMailbox
- F. Get-MSOLContact
- G. Get-Recipient
- H. Get-Mailbox
- I. Get-Group
- J. Get-MailboxStatistics
- K. Get-MSOLUser
- L. Get-MailContact

Answer: K

Explanation:

We use the Get-MsolUser -UnlicensedUsersOnly command to retrieve all users which do not have a Microsoft Exchange Online license.

The Get-MsolUser cmdlet can be used to retrieve an individual user, or list of users.

The -UnlicensedUsersOnly [<SwitchParameter>] parameter filters for only users who are not assigned a license.

NEW QUESTION 11

- (Exam Topic 3)

You are the Office 365 administrator for your company. You audit the Windows Azure Active Directory Rights Management configuration for the company.

You need to view a log of the recent administrative commands performed against the Microsoft Rights Management Service.

Which three Windows PowerShell cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of actions to the answer area and arrange them in the correct order.

Answer Area

Get-AadrmAdminLog**Get-AadrmRoleBasedAdministrator****Import-Module AADRM****Connect-AadrmService****Get-AadrmSuperUser****Get-MsolUser**

- A. Mastered
- B. Not Mastered

Answer: A**Explanation:**

Although you can activate Azure Rights Management by using the Office 365 admin center or the Azure Management Portal, you can also use the Windows PowerShell module for Azure Rights Management to do this. First we active Azure Rights Management by import it through Import-AadrmTpd, then we connect to the service with Connect-AadrmService, and finally we generate the log with Get-AadrmAdminLog.

Step 1: The Import-AadrmTpd cmdlet imports an Active Directory Rights Management Services (AD RMS) trusted publishing domain (TPD) over the Internet into your tenant for Azure Rights Management so that you can migrate Rights Management from on-premises to the cloud.

Step 2: The Connect-AadrmService cmdlet connects you to the Azure Rights Management service. This cmdlet can also be used by a partner company that manages your tenant.

Connect by using this cmdlet before you configure Rights Management by using other cmdlets in this module. Step 3: The Get-AadrmAdminLog cmdlet generates logs for all Rights Management administrative commands.

References:

<http://technet.microsoft.com/en-us/library/jj585027.aspx>**NEW QUESTION 15**

- (Exam Topic 3)

You plan to deploy an Office 365 tenant to multiple offices around the country.

You need to modify the users and groups who are authorized to administer the Rights Management service. Which Windows PowerShell cmdlet should you run?

- A. Add-MsolGroupMember
- B. Get-Add rm Role Based Administrator
- C. Remove-AadrmRoleBasedAdministrator
- D. Enable AadrmSuperUserFeature

Answer: D**Explanation:**

The Enable-AadrmSuperUserFeature cmdlet enables the super user feature. With this feature enabled, you can add or remove super users for Azure Rights Management. By default, the super users feature is not enabled, and no users are assigned to this feature. By enabling this feature we can modify the users and groups that are able to administer the Rights Management service.

References:

<https://docs.microsoft.com/en-us/powershell/module/aadrm/enable-aadrmsuperuserfeature?view=azureipps>**NEW QUESTION 19**

- (Exam Topic 3)

Your company has a hybrid deployment of Office 365. You need to verify whether free/busy information sharing with external users is configured.

Which Windows PowerShell cmdlet should you use?

- A. Test-OutlookConnectivity
- B. Test-FederationTrust
- C. Get-OrganizationRelationship
- D. Get-MSOLDomainFederationSettings

Answer: C**Explanation:**

How to troubleshoot free/busy issues in a hybrid deployment of on-premises ExchangeServer and Exchange Online in Office 365

Use the Get-OrganizationRelationship cmdlet to retrieve settings for an organization relationship that has been created for federated sharing with other federated Exchange organizations or for hybrid deployments with ExchangeOnline. You can use this information to troubleshoot free/busy issues in a hybrid deployment.

In more detail (see step 4 below):

To help troubleshoot this issue, follow these steps:

- ▶ On an on-premises computer that's running Microsoft Exchange 2010 Server Service Pack 1 (SP1), click Start, click All Programs, click Microsoft Exchange Server 2010, and then click Exchange Management Shell.
- ▶ At the command line, type the following command, and then press Enter: Get-FederationInformation -domainname <Office 365Domain> In this command, the <Office 365 Domain> placeholder represents the default Office 365 domain (for example, adatum.onmicrosoft.com).
- ▶ In the results, note the TargetApplicationUri and TargetAutodiscoverEpr values. These are the sett that the target domain must have to make sure that the federation trust is set up correctly.
- ▶ To display the trust information that is currently set up for the default Office 365 domain, run the following command: Get-OrganizationRelationship | FL

NEW QUESTION 22

- (Exam Topic 4)

An organization plans to deploy an Office 365 tenant. The company has two servers named SERVER1 and SERVER2. SERVER1 is a member server of the Active Directory forest that you are synchronizing. SERVER2 is a standalone server. Both servers run Windows Server 2012.

You need to use the Azure Active Directory Connect to provision users

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

The screenshot shows an exam question interface. On the right, there is a grey box labeled 'Answer Area'. On the left, there is a list of five actions in yellow boxes, each with a small blue play button icon on the left side. The actions are:

- Install and run the Azure AD Connect on SERVER2.
- From the Office 365 admin center, activate directory synchronization.
- Install and run the Azure AD Connect on SERVER1.
- Activate all synchronized users.
- Install Active Directory Domain Services (AD DS) on the member server.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

You must activate directory synchronization before you install the Directory Sync tool.

The Directory Sync tool must be installed on a computer that is joined to the Active Directory forest that you plan to synchronize. As SERVER2 is a standalone server, it is not joined to the Active Directory forest and cannot be used for synchronization.

Finally, assign license to activate services for the synchronized users.

NEW QUESTION 27

- (Exam Topic 4)

You are the Office 365 administrator for your company. The company synchronizes the local Active Directory objects with a central identity management system. The environment has the following characteristics:

- ▶ Each department has its own organizational unit (OU).
 - ▶ The company has OU hierarchies for partner user accounts.
 - ▶ All user accounts are maintained by the identity management system. You need to ensure that partner accounts are NOT synchronized with Office 365.
- What should you do?

- A. Configure OU-based filtering by using Azure Active Directory Connect (Azure AD Connect).
- B. In the Azure Active Directory portal, configure OU-based filtering.
- C. Configure user attribute-based filtering by using Azure Active Directory Connect (Azure AD Connect).
- D. In the Azure Active Directory portal, configure user attribute-based filtering.

Answer: A

Explanation:

You can use Azure AD Connect to enable Active Directory synchronization filtering. This allows you to filter out objects that should not be synchronized to the

cloud. The objects that can be filtered are:
 Organizational-units (OUs), domains, and user-attributes.

NEW QUESTION 32

- (Exam Topic 5)

You are the Office 365 administrator for your company. You prepare to install Active Directory Federation Services (AD FS). You need to open the correct port between the AD FS proxy server and the AD FS federation server. Which port should you open?

- A. TCP 80
- B. TCP 135
- C. TCP 389
- D. TCP 443
- E. TCP 636
- F. TCP 1723

Answer: D

Explanation:

Secure Sockets Layer (SSL) is used to secure communications between federation servers, clients, Web Application Proxy, and federation server proxy computers. HTTP over SSL (HTTPS) uses TCP port 443.

NEW QUESTION 37

- (Exam Topic 6)

You are the Office 365 administrator for your company. You have a workstation that runs Windows 8. You need to install the prerequisite components so that you can view mail protection reports on the workstation.

Which two items must you install? Each correct answer presents part of the solution.

- A. SQL Server Analysis Services
- B. Microsoft Connectivity Analyzer Tool
- C. Microsoft Access 2013
- D. .NET Framework 4.5
- E. Microsoft Excel 2013

Answer: DE

Explanation:

To view the Mail Protection Reports for Office 365 on your computer, you need to install the “Microsoft Excel plugin for Exchange Online Reporting” component which is a free download from Microsoft.

The “Microsoft Excel plugin for Exchange Online Reporting” component has the following system requirements:

Supported Operating System:

- ▶ Windows 7, Windows 8, Windows Server 2008 Required Software:
- ▶ Microsoft Office Excel 2013 Additional Requirements:
- ▶ Microsoft .NET Framework 4.5
- ▶ Microsoft Online Services Sign-In Assistant (for Exchange Online Protection customers only)
- ▶ An Office 365 subscription that contains Exchange Online or Exchange Online Protection
- ▶ Email address you use to sign in to Office 365

NEW QUESTION 42

- (Exam Topic 6)

An organization deploys an Office 365 tenant. The Service health page displays the following information:

SERVICE	TODAY	NOV 13
Exchange Online		
Identity Service		
Lync Online		
Office 365 Portal		
Office Subscription		
Rights Management Service		
SharePoint Online		
Yammer Enterprise		

You need to report the status of service interruptions for Exchange Online and SharePoint Online. Use the drop-down menus to complete each statement based on the information presented in the screen shot. Each correct selection is worth one point.

Answer Area

What is the current status of Exchange Online and SharePoint Online?

When is the earliest date that a post-incident review will be available for SharePoint Online?

Answer Area

What is the current status of Exchange Online and SharePoint Online?

SharePoint Online is available. Exchange Online is available, but service is degraded.
 SharePoint Online is available. Issues with the Exchange Online service are under investigation.
 The SharePoint Online subscription is expired. The Exchange Online subscription will expire soon.
 The SharePoint Online subscription is expired. Issues with the Exchange Online service are under investigation.

When is the earliest date that a post-incident review will be available for SharePoint Online?

November 13
 November 21
 November 30
 December 1

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

You can log in to Office 365 as an Office 365 Administrator and view the Service Health Page to view the status of your Office 365 services. You can use the Service Health Page to view information on the status of your services for the current day or you can select the last 6 days or 30 days for a historical view. The following icons are used in the Service Health Page:

Microsoft says that they will publish a post-incident review within five business days. Therefore, it is possible that a post-incident review could be issued today.

References:

http://office.microsoft.com/en-in/office365-suite-help/view-the-status-of-your-services-HA102817837.aspx#_St <http://technet.microsoft.com/en-us/library/office-365-service-continuity.aspx>

NEW QUESTION 43

- (Exam Topic 6)

You are the Office 365 administrator for your company.

Users report that they have received significantly more spam messages over the past month than they normally receive.

You need to analyze trends for the email messages received over the past 60 days. From the Office 365 admin center, what should you view?

- A. Messages on the Service health page
- B. The Received mail report
- C. The Office 365 Malware detections in sent mail report
- D. The Mailbox content search and hold report

Answer: B

Explanation:

An Office 365 administrator can use the Mail Protection Reports in Office 365 to view data about malware, spam, and rule detections for up to the last 90 days. The reports can be viewed as a graph to display trends for email messages over a period of time; in this question, for the last 60 days. The graph view will tell you if the amount of good mail, malware and spam detected has increased or decreased over the time period of the report.

The Received Mail report shows the received mail grouped by traffic type:

- ▶ Good mail – messages that were received and not identified as spam or malware.
- ▶ Spam – messages identified as spam.
- ▶ Malware – messages that contained malware.
- ▶ Transport rules – messages that matched at least one rule.

References:

[https://technet.microsoft.com/en-us/library/dn500744\(v=exchg.150\).aspx](https://technet.microsoft.com/en-us/library/dn500744(v=exchg.150).aspx)

NEW QUESTION 46

- (Exam Topic 6)

You are the Office 365 administrator for your company. You configure new user accounts for User1 and User2. User1 has an on-premises mailbox. User2 has an Office 365 mailbox.

Each user must be able to view the availability of the other user.

You need to ascertain whether users can share their free/busy information. What should you use?

- A. Transport Reliability IP Probe (TRIPP Tool)
- B. Microsoft Remote Connectivity Analyzer Tool

- C. Business Connectivity Services
- D. Windows Azure Active Directory Rights Management

Answer: B

Explanation:

Microsoft Remote Connectivity Analyzer is a website offered by Microsoft for testing remote connectivity to server services such as Exchange Server, Skype for Business Server and Office 365. In this question, we need to run the Free/Busy test in the Microsoft Remote Connectivity Analyzer website.

The Office 365 tab on the Remote Connectivity Analyzer has several options for performing different tests regarding Office 365 connectivity. These tests include:

- ▶ Office 365 General Tests
- ▶ Microsoft Exchange ActiveSync Connectivity Tests
- ▶ Microsoft Exchange Web Services Connectivity Tests
- ▶ Microsoft Office Outlook Connectivity Tests
- ▶ Internet Email Tests
- ▶ Mail Flow Configuration
- ▶ Free/Busy Test

The description given for the Free/Busy test is as follows:

“This test verifies that an Office 365 mailbox can access the free/busy information of an on-premises mailbox, and vice versa (one direction per test run).”

NEW QUESTION 51

- (Exam Topic 6)

You are the Exchange Online administrator for an organization. The organization migrates all users to Exchange Online. An employee works for a partner organization named Contoso, Ltd. The employee uses the email alias `employeeel@contoso.com`.

Users report that over the past week, they have not received email messages from `employeeel@contoso.com`. You need to trace email messages that originate from `employeeel@contoso.com` to users inside your organization.

In the message trace window, which two settings should you configure? To answer, select the appropriate objects in the answer area.

Search for email messages from or to a user or users. You can specify user names or fully qualified email addresses. Wildcards are supported.

Sender:

Recipient:

Message was sent or received:

▼

Delivery status:

▼

Message ID:

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

None of the fields in the Message Tracking window are compulsory.

In this question, the users have not received emails from `employeeel@contoso.com` for the last week. To view tracking information for emails from `employeeel@contoso.com` for the last week, we need to add `employeeel@contoso.com` as a sender. For a sender outside the organization, you can manually type in the email address.

The default search period is 48 hours. To view one week's worth of tracking data, we need to change the search period to 7 days.

NEW QUESTION 52

- (Exam Topic 6)

A company deploys an Office 365 tenant in a hybrid configuration with Exchange Server 2016.

Office 365 users cannot see free/busy information that is published from the on-premises Exchange Server. In addition, Exchange Server users cannot see free/busy information that is published from Office 365.

You need to troubleshoot why users cannot access free/busy information from both Office 365 and Server 2016. Which tool should you run?

- A. the Hybrid Configuration wizard
- B. the Remote Connectivity Analyzer with the Exchange Server tab selected
- C. the Microsoft Connectivity Analyzer Tool
- D. the Remote Connectivity Analyzer with the Office 365 tab selected

Answer: D

Explanation:

Microsoft Remote Connectivity Analyzer is a website offered by Microsoft for testing remote connectivity to server services such as Exchange Server, Skype for Business Server and Office 365.

The Office 365 tab on the Remote Connectivity Analyzer has several options for performing different tests regarding Office 365 connectivity. These tests include:

- Office 365 General Tests
- Microsoft Exchange ActiveSync Connectivity Tests
- Microsoft Exchange Web Services Connectivity Tests
- Microsoft Office Outlook Connectivity Tests
- Internet Email Tests
- Mail Flow Configuration
- Free/Busy Test

The description given for the Free/Busy test is as follows:

“This test verifies that an Office365 mailbox can access the free/busy information of an on-premises mailbox, and vice versa (one direction per test run).”

NEW QUESTION 54

- (Exam Topic 7)

You need to configure DNS for the AD FS deployment.

Which DNS entries should you use? To answer, drag the appropriate DNS entries to the correct topologies. Each entry may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content

NOTE: Each correct selection is worth one point.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

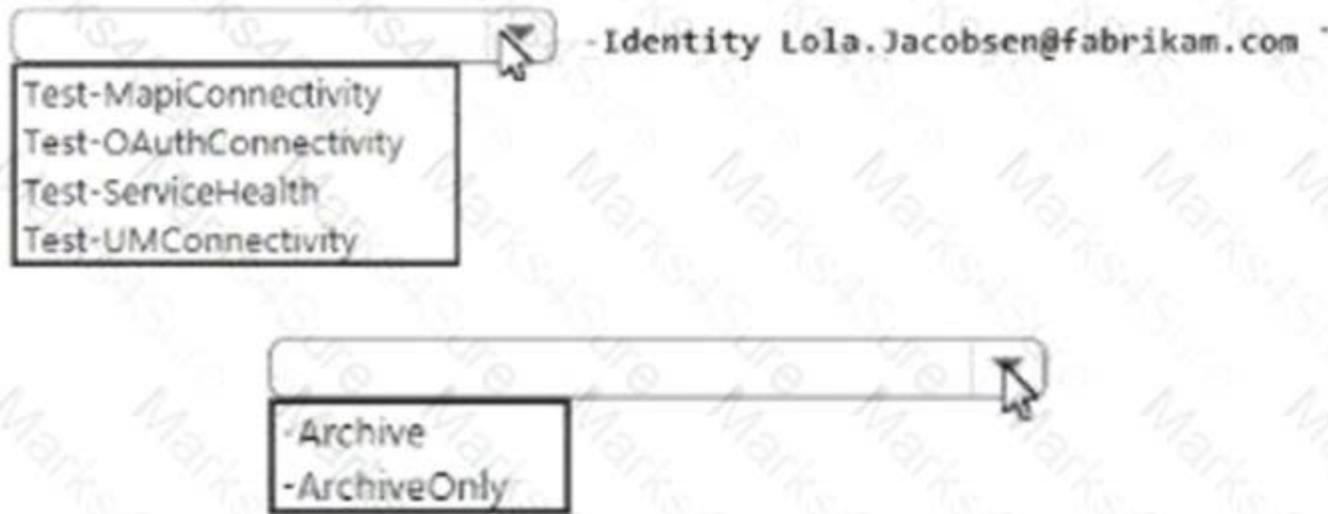

AD FS topology	DNS entry
Perimeter Network Namespace	Fs.devfabrikam.com
Internal Network Namespace	Enterpriseregistration.fabrikam.com

NEW QUESTION 59

- (Exam Topic 7)

You need to troubleshoot the issues for user Lola.Jacobsen.

Which command should you run? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

References:

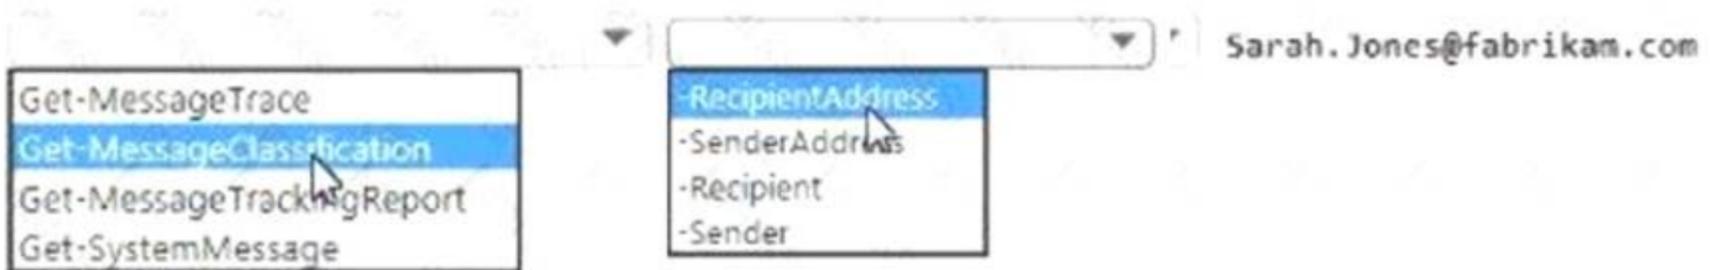

<https://docs.microsoft.com/en-us/powershell/module/exchange/mailboxes/test-mapiconnectivity?view=exchange>

NEW QUESTION 62

- (Exam Topic 7)

You need to troubleshoot the issues for user Sarah.Jones.

How should you complete the command? To answer, select the appropriate options to the answer area. NOTE: Each correct selection is worth one point

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

References:

<https://docs.microsoft.com/en-us/powershell/module/exchange/mail-flow/get-messagetrace?view=exchange-ps>

NEW QUESTION 66

- (Exam Topic 7)

You need to troubleshoot the issues for user Alex.Simmons. What should you run?

- A. hybrid environment free/busy troubleshooter
- B. Microsoft Office Outlook Connectivity Tests
- C. Microsoft Office Configuration Analyzer Tool
- D. Microsoft Office 365 Client Performance Analyzer

Answer: C

NEW QUESTION 68

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to ensure that a user named User1 can create mailboxes in Exchange Online and sites in SharePoint Online.

Solution: You add User1 to the SharePoint administrator admin role. Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 70

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to configure the Office 365 subscription to ensure that Active Directory users can connect to Office 365 resources by using single sign-on (SSO).

Solution: You run Convert-MsolFederatedUser for all users. Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

The Convert-MsolFederatedUser cmdlet updates a user in a domain that was recently converted from single sign-on to standard authentication type. This option will not meet the objective of the question.

References:

<https://docs.microsoft.com/en-us/powershell/module/msonline/convert-msolfederateduser?view=azureadps-1.0>

NEW QUESTION 71

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to configure the Office 365 subscription to ensure that Active Directory users can connect to Office 365 resources by using single sign-on (SSO).

Solution: You run Convert-MsolDomainToFederated for the fabrikam.com domain and the contoso.com domain.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

The Convert-MSOLDomainToFederated cmdlet converts the specified domain from standard authentication to single sign-on. This includes configuring the relying party trust settings between the Active Directory Federation Services 2.0 server and Microsoft Online. As part of converting a domain from standard authentication to single sign-on, each user must also be converted. This conversion happens automatically the next time a user signs in. No action is required by the administrator.

References:

<https://docs.microsoft.com/en-us/powershell/module/msonline/convert-msoldomaintofederated?view=azureadps>

NEW QUESTION 73

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You synchronize all of the fabrikam.com users to Azure AD.

You need to implement the planned changes for the users in the United States office.

Which command should you run? To answer, select the appropriate options in the answer area.

Answer Area

<div style="border-bottom: 1px dashed gray; padding-bottom: 5px;">Get-AdUser</div> <div style="border-bottom: 1px dashed gray; padding-bottom: 5px;">Get-MsolUser</div> <div style="padding-bottom: 5px;">New-MsolLicenseOptions</div>	All -UsageLocation "US"	<div style="border-bottom: 1px dashed gray; padding-bottom: 5px;">-EnableDFilter</div> <div style="border-bottom: 1px dashed gray; padding-bottom: 5px;">-SearchString</div> <div style="padding-bottom: 5px;">-UnlicensedUsersOnly</div>
<div style="border-bottom: 1px dashed gray; padding-bottom: 5px;">New-MsolLicenseOptions</div> <div style="border-bottom: 1px dashed gray; padding-bottom: 5px;">Set-MsolUser</div> <div style="padding-bottom: 5px;">Set-MsolUserLicense</div>	-AddLicenses "Fabrikam:ENTERPRISEPACK"	

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Get-MsolUser cmdlet gets an individual user or list of users from Azure Active Directory.

The -UnlicensedUsersOnly parameter indicates that only users who are not assigned a license are returned. The Set-MsolUser cmdlet modifies a user object in Azure Active Directory.

References:

<https://docs.microsoft.com/en-us/powershell/module/msonline/get-msoluser?view=azureadps-1.0> <https://docs.microsoft.com/en-us/powershell/module/msonline/set-msoluser?view=azureadps-1.0>

NEW QUESTION 77

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to configure the AD FS servers to meet the technical requirement for accessing Office 365 from a web browser.

What command should you run? To answer, select the appropriate options in the answer area.

Answer Area

▼
Set-AdfsAdditionalAuthenticationRule
Set-AdfsClaimsProviderTrust
Set-MsolAdfsContext

`-TargetIdentifier "AD AUTHORITY"`

▼
-AdditionalAuthenticationRules
-AdfsUserCredentials
-AlternateLoginID

`mail -LookupForests fabrikan.com`

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Set-AdfsClaimsProviderTrust cmdlet is used to configure the trust relationship with a claims provider. The -AlternateLoginID parameter identifies the LDAP name of the attribute that you want to use for login.

References: [https://technet.microsoft.com/en-us/library/dn479371\(v=wps.630\).aspx](https://technet.microsoft.com/en-us/library/dn479371(v=wps.630).aspx)

NEW QUESTION 82

- (Exam Topic 9)

You need to implement an authentication solution for contoso.com users. What should you do?

- A. Install two Active Directory Federation Services (AD FS) servers and two AD FS Proxy servers.
- B. Install a second Azure AD Connect serve
- C. Add a second SQL Server instance in an Always On Failover Cluster and implement password sync.
- D. Install two Active Directory Federation Services (AD FS) servers and two Web Application Proxy (WAP) servers.
- E. Install a single Active Directory Federation Services (AD FS) server and a single Web ApplicationProxy (WAP) server.

Answer: A

NEW QUESTION 85

- (Exam Topic 9)

You need to enable the new features in Office 365 for contoso.com and fabricam.com users.

Which plans should you implement? To answer, drag the appropriate plans to the correct domains. Each plan may be used once, more than once, or not at all.

You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer Area		
Plans	Domain	Workload
Office 365 ProPlus	contoso.com	Plan
Office 365 Enterprise E1	fabricam.com	Plan
Office 365 Enterprise E3		
Office 365 Enterprise E5		

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The scenario states: "Contoso, Ltd. users must be able to store and share personal documents that are accessible from any web browser or mobile device. Fabrikam, Inc. users must be able to send individual instant messages as well as use group chat workspaces." The scenario also states: "The least expensive Office 365 plan must be used whenever possible."
 Office 365 ProPlus offers Office applications plus cloud file-storage and sharing.
 Office 365 Enterprise E1 offers email, file storage and sharing, Office Online, meetings and IM, and more. References: <https://products.office.com/en-us/business/compare-more-office-365-for-business-plans>

NEW QUESTION 87

- (Exam Topic 9)

You need to create a DNS record to resolve the email issues for ADatum Corporation users.

How should you configure the DNS record? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Record type

▼

TXT

MX

CNAME

Value

▼

v=spf1 include:spf.protection.outlook.com -all

adatum-com.mail.protection.outlook.com

autodiscover.outlook.com

clientconfig.microsoftonline-p.net

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

MX (mail exchanger) records offer a simple way for mail servers to know where to send email. If you want Office 365 to receive all email addressed to anyone@contoso.com, the MX record for contoso.com should point to Office 365, and it will look like the following example:
 Hostname: contoso-com.mail.protection.outlook.com Priority: 0
 TTL: 1 hour References:
<https://support.office.com/en-us/article/Create-DNS-records-at-Register365-for-Office-365-004030b4-10ad-402> [https://technet.microsoft.com/en-us/library/jj937232\(v=exchg.150\).aspx](https://technet.microsoft.com/en-us/library/jj937232(v=exchg.150).aspx)

NEW QUESTION 89

- (Exam Topic 10)

You need to resolve the issue for Used. What should you do?

- A. Open a service request in the Office 365 admin center.
- B. Create a new ticket with Microsoft Premier Support.
- C. Reset the account password for the user.
- D. Run the Office 365 Client Performance Analyzer.

Answer: D

NEW QUESTION 91

- (Exam Topic 11)

You administer an Office 365 tenant for a company named Fabrikam, Inc. You deploy Active Directory Federation Services (AD FS) including Web Application Proxy servers.

You need to customize the AD FS logon screen to display your company name.

How should you complete the Windows PowerShell command? To answer, select the appropriate Windows PowerShell segments in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Set-AdfsGlobalWebContent -CompanyName " Fabrikam Company"

Running the Set-AdfsGlobalWebContent cmdlet with the –CompanyName parameter specifies the company name for AD FS to display in the sign-in pages when you have not set a logo on the active web theme.

NEW QUESTION 92

- (Exam Topic 11)

You are the Office 365 administrator for your company. The company recently subscribed to Office 365 ProPlus.

When performing a test deployment, you receive the following error message: "Windows cannot find 'C:\Program Files\Microsoft Office 15 \clientX64 \integratedOffice. exe'. Make sure you typed the name correctly, and then try again." You need to successfully complete the test deployment.

Which two actions can you perform to achieve this goal? Each correct answer presents a complete solution.

- A. Manually remove the registry subkeys associated with Office 2013, and then restart the Office 365 ProPlus installation.
- B. Completely uninstall existing versions of Office 2013 and then restart the Office 365 ProPlus installation.
- C. Download the Office 365 ProPlus package to a file share, and then deploy Office 365 ProPlus by using Group Policy.
- D. Automate the installation of Office 365 ProPlus applications by using Microsoft System Center Configuration Manager

Answer: AB

Explanation:

The answer is A and B because the issue deals with a conflict between Office 365 ProPlus and an existing Office installation. Both A and B could by themselves be a solution.

Deploying the installation through Group Policy or SCCM wouldn't make a difference and you would still get the same error.

NEW QUESTION 94

- (Exam Topic 11)

You are an administrator for a company. You are planning an Office 365 pilot. The deployment must provide the following features:

- Chat-centered workspaces for collaboration
- A method for users to share files with colleagues
- The ability for users to share their calendars with other users in the organization You need to implement the pilot.

Which Office 365 services should you implement? To answer, select the appropriate options in the answer area.

NOTE; Each correct selection is worth one point.

Answer Area

Requirement

Office 365 Service

Chat-centered workspace

SharePoint Online
 Yammer
 Microsoft Groups
 Microsoft Teams
 Skype for Business

File sharing

SharePoint Online
 OneDrive for Business
 Exchange Online
 Microsoft Teams
 Yammer

Calendar sharing

SharePoint Online
 OneDrive for Business
 Exchange Online
 Microsoft Teams
 Skype for Business

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Requirement

Office 365 Service

Chat-centered workspace

SharePoint Online
 Yammer
 Microsoft Groups
 Microsoft Teams
 Skype for Business

File sharing

SharePoint Online
 OneDrive for Business
 Exchange Online
 Microsoft Teams
 Yammer

Calendar sharing

SharePoint Online
 OneDrive for Business
 Exchange Online
 Microsoft Teams
 Skype for Business

NEW QUESTION 99

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You have an on-premises Active Directory forest.

You deploy Active Directory Federation Services (AD FS) and purchase an Office 365 subscription. You need to create a trust between the AD FS servers and the Office 365 subscription.

Solution: You run the Convert-MsolDomainToFederated cmdlet. Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

Each domain that you want to federate must either be added as a single sign-on domain or converted to be a single sign-on domain from a standard domain. Adding or converting a domain sets up a trust between AD FS and Microsoft Azure Active Directory (Microsoft Azure AD). The Convert-MSOLDomainToFederated cmdlet converts the specified domain from standard authentication to single sign-on (also known as identity federation), including configuring the relying party trust settings between the Active Directory Federation Services (AD FS) server as part of converting a domain from standard authentication to single sign-on, each user must also be converted. This conversion happens automatically the next time a user signs in; no action is required by the administrator.

References:

[https://msdn.microsoft.com/en-us/library/azure/dn194092\(v=azure.98\).aspx](https://msdn.microsoft.com/en-us/library/azure/dn194092(v=azure.98).aspx) <https://msdn.microsoft.com/en-us/library/azure/jj205461.aspx>

NEW QUESTION 103

- (Exam Topic 11)

You have an Office 365 subscription and an on-premises deployment of Active Directory. You deploy Microsoft Azure AD Connect. Currently, the synchronization process is running. You need to modify the synchronization schedule. Which task should you perform first?

- A. Enable staging mode.
- B. Invoke an Azure Active Directory (Azure AD) sync cycle profile.
- C. Create an Azure Active Directory (Azure AD) sync connector.
- D. Start the Azure AD Connect installation wizard.

Answer: C

Explanation:

The sync engine processes identity information from different data repositories, such as Active Directory or a SQL Server database. The sync engine encapsulates interaction with a connected data source within a module called a Connector. Each type of connected data source has a specific Connector. The Connector translates a required operation into the format that the connected data source understands.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/connect/active-directory-aadconnectsync-understanding->

NEW QUESTION 104

- (Exam Topic 11)

A company has offices in New York and London. The current on-premises Exchange 2013 organization has servers in both sites. Mailboxes for users located in New York are on an Exchange server in the New York office. Mailboxes for users located in London are on an Exchange server in the London office. You must migrate all mailboxes to Exchange Online. You create an Office 365 tenant and specify the company's New York address. You need to determine where the user's mailboxes will be created. Where are the mailboxes created in Exchange Online?

- A. Mailboxes for users in London are created in European datacenter
- B. Mailboxes for users in New York are created in North American datacenters.
- C. All user mailboxes are created in North American datacenters.
- D. All user mailboxes are created in a random datacenter anywhere in the world.
- E. During the migration process, an administrator must specify the region where each mailbox is created.

Answer: B

NEW QUESTION 107

- (Exam Topic 11)

A company has an Office 365 tenant. You must retrieve mailbox diagnostic data. You need to provide a report with this data for all users. Which report solution should you choose?

- A. Office 365 admin center
- B. downloadable spreadsheet
- C. reporting Windows PowerShell cmdlets
- D. REST reporting web service

Answer: D

Explanation:

The Office 365 Reporting web service enables developers to integrate information on email and spam, antivirus activity, compliance status, and Skype for Business Online activities into their custom service reporting applications and web portals.

References:

<https://msdn.microsoft.com/en-us/library/office/jj984325.aspx>

NEW QUESTION 112

- (Exam Topic 11)

You are the system administrator for a manufacturing company. You plan to implement Office 365. You must create accounts for all employees and implement a password policy that requires strong passwords. Which two characters can users include in passwords? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A. spaces
- B. *
- C. <
- D. Unicode characters
- E. !

Answer: BE

NEW QUESTION 117

- (Exam Topic 11)

Your company deploys an Office 365 tenant.

You need to ensure that you can view service health and maintenance reports for the past seven days. What are two possible ways to achieve this goal? Each correct answer presents a complete solution.

- A. View the service health current status page of the Office 365 admin center.
- B. Subscribe to the Office 365 Service Health RSS Notifications feed.
- C. View the service settings page of the Office 365 admin center.
- D. Run the Microsoft OnRamp Readiness Tool.

Answer: AB

Explanation:

As an Office 365 admin, you can see whether there has been a service interruption or outage in your service on the Office 365 service health page. The Service health page shows status information for today, the past six days, and 30 days of history.

NEW QUESTION 118

- (Exam Topic 11)

You have a legacy application that needs to send email to employees.

The legacy application runs on a client computer that must send email by using SMTP through Exchange Online.

You need to identify the correct host name and port information. Which settings should you use?

- A. Outlook.office365.com and port 25
- B. Outlook.office365.com and port 587
- C. Smtplib.office365.com and port 587
- D. Smtplib.office365.com and port 25

Answer: D

Explanation:

The legacy applications would use port 25 for smtp. The host name should be Smtplib.office365.com.

NEW QUESTION 120

- (Exam Topic 11)

You have an Office 365 subscription.

The Office 365 organization contains 500 users.

You need to identify the following users in the organization:

- users who have Litigation Hold enabled
- users who receive the most spam email messages
- users who have mailboxes that were accessed by an administrator

Which type of report should you review to identify each type of user? To answer, drag the appropriate reports to the correct types of users. Each report may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Reports

- Auditing
- Protection
- Rules
- Usage

Answer Area

Users who receive the most spam email messages:

Report

Users who have Litigation Hold enabled:

Report

Users who have mailboxes that were accessed by an administrator:

Report

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Azure AD Connect server must have .NET Framework 4.5.1 or later and Microsoft PowerShell 3.0 or later installed.

Azure AD Connect requires a SQL Server database to store identity data. SQL Server Express has a 10 GB size limit that enables you to manage approximately 100,000 objects.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/connect/active-directory-aadconnect-prerequisites>

NEW QUESTION 123

You have an Office 365 subscription that has several thousand mailboxes. The users in the Office 365 organization are located in different regions.

You need to view the path of the email messages sent from a user to an external recipient. Which cmdlet should you use?

- A. Get-MailDetailTransportRuleReport
- B. Get-MailTrafficReport
- C. Get-MailboxActivityReport
- D. Get-ServiceDeliveryReport

Answer: D

Explanation:

Use the Get-ServiceDeliveryReport cmdlet to view information about the message delivery path for a specified recipient.

Example:

This example shows the delivery path information for the recipient john@contoso.com. Get-ServiceDeliveryReport -Recipientjohn@contoso.com

NEW QUESTION 125

- (Exam Topic 11)

Your company has a hybrid deployment of Office 365.

You need to set the authentication method of the federation servers to forms-based authentication. What should you do?

- A. Modify the Web.config file in the %systemroot%\inetpub\adfs\ls directory.
- B. Modify the Global.asax file in the %systemroot%\inetpub\adfs\ls directory.
- C. From the AD FS 2.0 Management console, add a relaying party trust.
- D. From the AD FS 2.0 Management console, add a claims provider trust.

Answer: A

Explanation:

References:

<http://msdn.microsoft.com/en-us/library/xdt4thty.aspx>

NEW QUESTION 130

- (Exam Topic 11)

You manage the Office 365 tenant for Contoso, Ltd.

You need to implement the following requirements for a user named john@contoso.com:

- Must use app passwords for mobile Office applications.
- Existing apps must continue to work until apps are configured to use app passwords.
- Must not experience an interruption in service when using apps that are not browser-based.

How should you complete the Microsoft Azure PowerShell commands? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

```

$status = New-Object
-TypeName
Microsoft.Online.Administration.StrongAuthenticationRequirement
$status.RelyingPartyv = "+"
$status.State = "
                    [v]
                    Enabled
                    Disabled
                    Enforced
                    [v]
                    "

$state = @($status)

                    [v]
                    Set-MsolUser
                    Set-MsolUserPassword
                    Set-MsolUserPrincipalName
                    [v]
                    -UserPrincipalName john@contoso.com

                    -StrongAuthenticationRequirements $state
    
```

A. Mastered

B. Not Mastered

Answer: A

Explanation:

References:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-mfa-userstates>

NEW QUESTION 135

- (Exam Topic 11)

A company has an Office 365 tenant that has an Enterprise E1 subscription. Users currently sign in with credentials that include the contoso.com domain suffix. The company is acquired by Fa rikam. Users must now sign in with credentials that include the fabrikam.com domain suffix. You need to ensure that all users sign in with the new domain name. Which Windows PowerShell cmdlet should you run?

- A. Set-MsolUser
- B. Set-MsolUserLicense
- C. Set-MsotUterPrincipalName
- D. Convert-MsotFederatedUser

Answer: C

NEW QUESTION 136

- (Exam Topic 11)

You ate the Office 365 administrator.

You need to enable monitoring of Office 365 by using System Center Operations Manager (SCOM).

Which five actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- From the SCOM console, import the management pack.
- Install the Microsoft System Center Management Pack for Office 365 on the SCOM server.
- Download the SCOM Management Pack for Operations Management Suite Service Map integration.
- Download the Microsoft System Center Management Pack for Office 365.
- From the SCOM console, add the Office 365 subscription.
- Install the SCOM Pack for Operations Management Suite Service Map integration on the SCOM server.
- From the SCOM console, configure the workspace.

▶

◀

Answer area

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Actions

- From the SCOM console, import the management pack.
- Install the Microsoft System Center Management Pack for Office 365 on the SCOM server.
- Download the SCOM Management Pack for Operations Management Suite Service Map integration.
- Download the Microsoft System Center Management Pack for Office 365.
- From the SCOM console, add the Office 365 subscription.
- Install the SCOM Pack for Operations Management Suite Service Map integration on the SCOM server.
- From the SCOM console, configure the workspace.

▶

◀

Answer area

- Download the Microsoft System Center Management Pack for Office 365.
- Install the Microsoft System Center Management Pack for Office 365 on the SCOM server.
- From the SCOM console, add the Office 365 subscription.
- From the SCOM console, configure the workspace.
- From the SCOM console, import the management pack.

NEW QUESTION 140

- (Exam Topic 11)

You are configuring a new Office 365 tenant for a company. The company plans to use Microsoft SharePoint Online for document sharing and sending emails to users, and Exchange Online for email and calendaring. All employees use Office 365 ProPlus.

Users report issues sending and receiving emails. Some business partners report that emails from the company are rejected because the receiving server cannot validate that emails come from an authorized messaging server.

You need to configure DNS entries for Office 365.

Which DNS record should you use for each service? To answer, drag the appropriate DNS records to the correct services. Each DNS record may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

DNS records

- MX, Autodiscover, and SPF TXT only
- SPF TXT only
- MX and SPF TXT only
- MX, SPF, and SRV only
- MX and SRV only
- SPF and SRV only
- MX only

Answer area

Service	DNS record or records
Exchange	
SharePoint	

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

References:

- <http://howtonetworking.com/msapps/office365-11.htm>

NEW QUESTION 142

- (Exam Topic 11)

You are the Office 365 administrator for a company. All employees have Active Directory Domain Services (AD DS) user accounts. All users accounts are part of an organizational unit (OU) and are members of a security group.

You deploy Azure Active Directory (Azure AD) Connect by using the Express Settings.

You plan to provision user accounts to Office 365. Only employee user accounts should be synchronized to Office 365.

You need to enable filtering for Azure AD Connect.

Which two types of filtering can you use? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A. Domain-based
- B. OU-based
- C. Group-based
- D. Attribute-based

Answer: BD

Explanation:

All four types of filtering can be used. However, domain-based and group-based filtering can only be configured on installation.

References:

- <https://docs.microsoft.com/en-us/azure/active-directory/connect/active-directory-aadconnectsync-configure-filte>

NEW QUESTION 146

- (Exam Topic 11)

You are the Office 365 administrator for a company.

You need to identify usage trends for the Microsoft Exchange Online service over the last 90 days. What should you do?

- A. View usage data in the Exchange Admin center.
- B. Run the Windows PowerShell cmdlet Get-MailboxUsageReport.
- C. Open the Office 365 Admin center and view the Active users card.
- D. In the Reports node of the Office 365 Admin center, view the Usage page.

Answer: D

Explanation:

References:

<https://support.office.com/en-us/article/activity-reports-in-the-office-365-admin-center-0d6dfb17-8582-4172-a9>

NEW QUESTION 150

- (Exam Topic 11)

A company has an Office 365 tenant that has an Enterprise E1 subscription.

You use single sign-on for all user accounts. You plan to migrate all services to Office 365. You need to ensure that all accounts use standard authentication.

Which Windows PowerShell cmdlet should you run?

- A. Set-MsolUser
- B. Redo-MsolProvisionUser
- C. Set-MsolUserLicense
- D. Set-MsolUserPrincipalName
- E. Convert-MsolFederatedUser
- F. Set-MailUser
- G. Set-LinkededUser
- H. New-MsolUser

Answer: E

Explanation:

The Convert-MsolFederatedUser cmdlet is used to update a user in a domain that was recently converted from single sign-on (also known as identity federation) to standard authentication type.

NEW QUESTION 153

- (Exam Topic 11)

You are the administrator for Contoso Ltd. The company uses Office 365 and has an on-premises Active Directory Domain Services (AD DS) domain that uses the namespace contoso.com.

You plan to implement Workplace Join. You must implement Active Directory Federation Services (AD FS) and Web Application Proxy (WAP). You take the following actions:

- 1. Install the WAP role on a server.
- 2. Allocate fs.conroso.com for the AD FS namespace.
- 3. Define the server FQDN as server1.contoso.com.

You need to install and configure certificate for the WAP server.

- A. a certificate with a subject of fs.contoso.com
- B. a certificate with a subject of server1.contoso.com
- C. a certificate with a subject alternative name that contains fs.contoso.com and enterpriseregistration.contoso.com
- D. a certificate with a subject alternative name that contains server1.contoso.com and fs.contoso.com

Answer: C

NEW QUESTION 158

- (Exam Topic 11)

Your company uses Office 365 and has an Enterprise E3 license plan. Employees are issued laptop computers that are configured with a standard image.

The image includes an installation of Office 365 ProPlus that must be activated by the employees. An employee recently received a new laptop computer to replace an older laptop.

The older laptop will be reimaged.

When the employee attempts to start Word for the first time, she receives a message saying that she cannot activate it because she has already activated five devices.

You need to help the employee to license Office on her new computer. Which two actions could you perform?

- A. Assign a second E3 license to the employee.
- B. Remove the employee's E3 license and then assign a new E3 license.
- C. Instruct her to Sign in to the Office 365 portal as the employee and deactivate the old laptop.
- D. Sign in to the Office 365 portal by using your Global Admin account and then deactivate the old laptop.

Answer: CD

Explanation:

References: <https://www.bettercloud.com/monitor/the-academy/deactivate-office-365-installation/>

NEW QUESTION 161

- (Exam Topic 11)

Your company has a Microsoft Exchange Server 2003 organization.

Users access their mailbox by using RPC over HTTP and Exchange ActiveSync.

You purchase an Office 365 subscription. From the Office 365 portal, you create and verify the accepted domain of the company. From the Exchange Control Panel, you attempt to migrate all of the mailboxes to Microsoft Exchange Online and you receive an error message indicating that the remote server is unavailable.

You need to identify what prevents the mailboxes from migrating.

Which tool should you use?

- A. the Microsoft Remote Connectivity Analyzer
- B. the Exchange Server Deployment Assistant
- C. the Office 365 Deployment Readiness Tool

D. the Microsoft Online Services Directory Synchronization Configuration Wizard

Answer: A

Explanation:

References:
<http://o365info.com/microsoft-remote-connectivity-analyzer-exrca-autodiscover-troubleshootingtools-part-2-of->

NEW QUESTION 166

- (Exam Topic 11)

A company has an Office 365 tenant. You plan to distribute the Office 365 ProPlus client to users. The client machines do not normally have Internet access. You need to activate the Office 365 ProPlus installations and ensure that the licenses remain active. What should you do?

- A. Connect the client computer to the Internet once to activate the Office 365 ProPlus client, and once every 90days after that.
- B. Connect the client computer to the Internet once to activate the Office 365 ProPlus client, and once every 30 days after that.
- C. Connect the client computer to the Internet only once to activate the Office 365 ProPlus client.
- D. Connect the client computer to the Internet once to activate the Office 365 ProPlus client, and once every 180 days after that.
- E. Connect the client computer to the Internet once to activate the Office 365 ProPlus client, and once every 365 days after that.

Answer: B

Explanation:

After you've verified the user is assigned a license, you should check that Office 365 ProPlus is activated. Activation usually occurs during initial installation. The computer has to connect to the Internet at least once every 30 days for Office 365 ProPlus to remain activated.

References:
<https://technet.microsoft.com/en-us/library/gg702620.aspx>

NEW QUESTION 168

- (Exam Topic 11)

You have an Office 365 tenant. An organization is migrating from an Exchange organization to Office 365. Users report that Outlook does not display the availability of other users for meetings. You must determine whether an Office 365 mailbox can access the scheduling availability of a user with an on-premises mailbox. You must also run a test to verify that an on-premises mailbox can access the scheduling availability of a user that has an Office 365 mailbox. You need to conduct the tests.

What should you do? To answer, drag the appropriate test to run to the correct mailbox test scenario. Each test may be used once, more than once or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Select the test you want to run.

Exchange Server | Lync / OCS Server | Office 365 | Client | Message Analyzer

Microsoft Exchange ActiveSync Connectivity Tests

- Exchange ActiveSync
- Exchange ActiveSync Autodiscover

Microsoft Exchange Web Services Connectivity Tests

- Synchronization, Notification, Availability, and Automatic Replies
- Service Account Access (Developers)

Microsoft Office Outlook Connectivity Tests

- Outlook Connectivity
- Outlook Autodiscover

Internet Email Tests

- Inbound SMTP Email
- Outbound SMTP Email
- POP Email
- IMAP Email

Microsoft Exchange Web Services Connectivity test is web-based, and is designed to help IT Administrators troubleshoot connectivity issues that affect their Exchange Server deployments. The tool simulates several client logon and mail flow scenarios. When a test fails, many of the errors have troubleshooting tips to assist the IT Administrator to correct the problem.

The Outlook Connectivity Test is available with the Microsoft Office 365 Support and Recovery Assistant.

NEW QUESTION 172

- (Exam Topic 11)

A company has an Office 365 tenant. You plan to use Office 365 to manage the DNS settings for a custom domain. You purchase the domain through a third-party provider.

You create a custom website. You must host the website through a third-party provider at the IP v6 address 2001:4860:4801:5::4d.

You need to configure the correct DNS settings.

What should you do? To answer, drag the appropriate DNS record to the correct DNS target. Each record may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer Area

	DNS target	DNS record
Name Server	ns1.bdm.microsoftonline.com	
A	ns2.bdm.microsoftonline.com	
AAAA	2001:4860:4801:5::4d	
TXT		
CNAME		
SRV		

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Change your domain's name server (NS) records

When you get to the last step of the domains setup wizard in Office 365, you have one task remaining. To setup your domain with Office 365 services, like email, you change your domain's name server (or NS) record

sat your domain registrar to point to the Office 365 primary and secondary name servers.

Use (AAAA) DNS record for the website. We must use an (AAAA) and not an (A) record since an Ipv6 address is used.

NEW QUESTION 173

- (Exam Topic 11)

You manage an on-premises email system. You plan to migrate to Microsoft Exchange Online. You need to determine the network bandwidth requirements to use Exchange Online.

What should you use?

- A. Windows PowerShell cmdlet Get-OutboundConnectorReport
- B. Microsoft Support and Recovery Assistant for Office 365
- C. Office 365 General Tests from the Remote Connectivity Analyzer portal
- D. Windows PowerShell cmdlet Test-MailFlow

Answer: C

Explanation:

References: <https://blogs.msdn.microsoft.com/vilath/2015/08/06/office-365-the-internet-bandwidth-planning/>

NEW QUESTION 174

- (Exam Topic 11)

An organization has an Office 365 tenant. You use multi-factor authentication for all privileged accounts. User1 is on an extended leave of absence.

You must configure the mailbox for User1 to forward to User2. You need to configure forwarding for User1's mailbox.

What should you do first?

- A. Launch Windows PowerShell as an administrator.
- B. Launch the Exchange Admin Center.
- C. Create an app password for the administrator account.
- D. Connect to Exchange Online by using Remote PowerShell.

Answer: C

NEW QUESTION 179

- (Exam Topic 11)

A company has an Office 365 tenant and uses Exchange Online and Skype for Business Online.

User1 is scheduling a Skype meeting with User2. User 1 is not able to see availability information for User2. You need to troubleshoot the issue.

What should you use?

- A. Microsoft Connectivity Analyzer Tool
- B. Microsoft Skype for Business Connectivity Analyzer Tool
- C. Message Header Analyzer
- D. IdFix

Answer: A

Explanation:

The Microsoft Connectivity Analyzer Tool verifies that an Office 365 mailbox can access the free/busy information of an on-premises mailbox, and vice versa

References:

<https://blogs.technet.microsoft.com/exchange/2013/03/11/announcing-microsoft-connectivity-analyzer-mca-1-0->

NEW QUESTION 184

- (Exam Topic 11)

A company has an Office 365 tenant that has an Enterprise E1 subscription. Users currently sign in with credentials that include the contoso.com domain suffix.

The company is acquired by Fabrikam. Users must now sign in with credentials that include the fabrikam.com domain suffix.

You need to ensure that all users sign in with the new domain name. Which Windows PowerShell cmdlet should you run?

- A. Set-MsolUser
- B. Redo-MsolProvisionUser
- C. Set-MsolUserLicense
- D. Set-MsolUserPrincipalName
- E. Convert-MsolFederatedUser
- F. Set-MailUser
- G. Set-LinkededUser
- H. New-MsolUser

Answer: D

Explanation:

The Set-MsolUserPrincipalName cmdlet is used to change the User Principal Name (user ID) of a user. This cmdlet can be used to move a user between a federated and standard domain, which will result in their authentication type changing to that of the target domain.

The following command renames user1@contoso.com to CCole@contoso.com.

```
Set-MsolUserPrincipalName -UserPrincipalName User1@contoso.com -NewUserPrincipalName CCole@contoso.com
```

References:

<https://docs.microsoft.com/en-us/powershell/module/msonline/set-msoluserprincipalname?view=azureadps-1.0>

NEW QUESTION 188

- (Exam Topic 11)

You are the administrator for Contoso Ltd. All employee mailboxes are hosted in Microsoft Exchange Online. All employees use the contoso.com company domain as their primary SMTP address.

Users from partner companies report that the email messages they receive from Contoso are marked as spam. You need to configure DNS to help prevent spam. What should you do? To answer, select the appropriate options in the dialog box in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

On your company's DNS servers do the following:

Create ▼ with the value of ▼

a TXT record

an MX record

an A record

an NS record

v=spf1 include:spf.protection.outlook.com -all
protection.outlook.com

v=spf1 include:spf.contoso.com -all
protection.contoso.com

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

References: [https://technet.microsoft.com/en-us/library/dn789058\(v=exchg.150\).aspx](https://technet.microsoft.com/en-us/library/dn789058(v=exchg.150).aspx)

NEW QUESTION 192

- (Exam Topic 11)

Contoso, Ltd. has an Office 365 tenant. The company has two servers named Server1 and Server2 that run Windows 2012 R2 Server. The servers are not joined to the contoso.com domain. Server2 is deployed to the perimeter network.

You install Secure Sockets Layer (SSL) certificates on both servers.

You deploy internal and external firewalls. All firewalls allow HTTPS traffic.

You must deploy single sign-on (SSO) and Active Directory Federation Services (AD FS). You need to install and configure all AD FS components in the environment.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Join Server1 and Server2 to the contoso.com domain.

Install and configure AD FS on Server1.

Run the following Windows PowerShell cmdlet on Server2:
Install-WindowsFeature

Run the following Windows PowerShell cmdlet on Server2:
Install-WebApplicationProxy

Run the following Windows PowerShell cmdlet on Server2:
Install-AdfsFarm

Join Server1 to the contoso.com domain.

Run the following Windows PowerShell cmdlet on Server2:
New-WebApplication

Answer Area

➤

➤

⬆

⬇

- A. Mastered
- B. Not Mastered

Answer: A

Passing Certification Exams Made Easy

visit - <https://www.2PassEasy.com>

Explanation:

All AD FS servers must be domain joined.

References: [https://technet.microsoft.com/en-us/library/dn554247\(v=ws.11\).aspx#BKMK_4](https://technet.microsoft.com/en-us/library/dn554247(v=ws.11).aspx#BKMK_4)

NEW QUESTION 197

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are the administrator for a company. You plan to use Office 365 for email and file sharing. You plan to implement a hybrid deployment with your current on-premises Active Directory Domain Services (AD DS) environment and Microsoft Azure Active Directory (Azure AD) Connect.

You must deploy Microsoft Exchange Online and OneDrive for Business for all employees. You have the following security requirements:

- ▶ All employees must use complex passwords.
- ▶ Passwords must be changed every six months.
- ▶ Employees must use multi-factor authentication (MFA) when possible.

You need to implement MFA verification options to use with the employee's password. Solution: Have the employee receive an SMS text.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

MFA for Office 365 requires users to acknowledge a phone call, text message, or app notification on their smart phones after correctly entering their passwords.

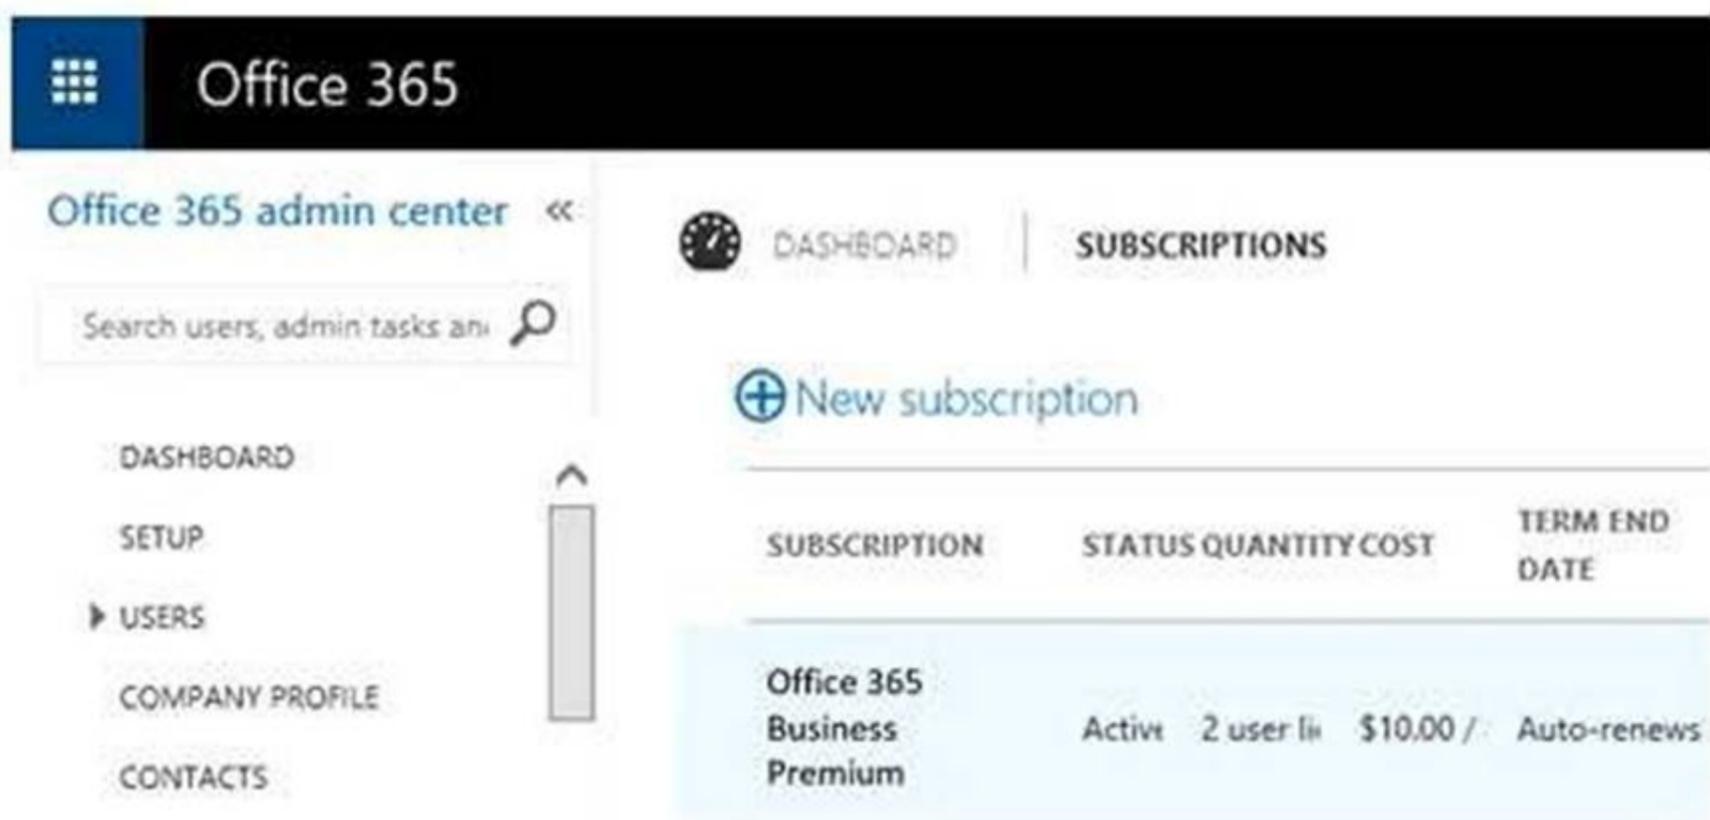

References:

<https://support.office.com/en-us/article/Set-up-multi-factor-authentication-for-Office-365-users-8f0454b2-f51a->

NEW QUESTION 198

- (Exam Topic 11)

You manage an Office 365 tenant. The subscription details for the tenant are displayed in the following screenshot.

Use the drop-down menus to select the answer choice that answers each question. NOTE: Each correct answer is worth one point.

For each user, what is the maximum number of devices on which you can install Microsoft Office?

0
2
5
10
20

Which services does the tenant have licensing rights to use?

Exchange only
 Exchange and SharePoint
 Exchange and Skype for Business
 Exchange, SharePoint, and Yammer
 Exchange, SharePoint, Skype for Business, and Yammer

What is the maximum number of user accounts that you can create in the tenant?

100
200
300
400
500

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

- ▶ Online Services include: Exchange, Sharepoint, Yammer, Skype for Business, etc.
- ▶ Office 365 Small Business Premium supports a maximum of 300 users

NEW QUESTION 201

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You deploy Office 365 for all company users. You use Microsoft Exchange Online for company email. You must develop a process to assign licenses to new users in your company.

You need to implement the licensing process.

Solution: Run the Set-Mailbox Windows PowerShell cmdlet.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

The Set-MsolUserLicense cmdlet must be used, not the Set-Mailbox cmdlet. References:

<https://docs.microsoft.com/en-us/office365/enterprise/powershell/assign-licenses-to-user-accounts-with-office-3>

NEW QUESTION 203

- (Exam Topic 11)

You deploy Office 365.

You must implement Microsoft Skype for Business Online for all users, including audio and video for all desktop clients. All company desktop machines reside behind a company firewall.

You need configure the firewall to allow clients to use Skype for Business Online.

Which three outbound ports or port ranges should you open? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. TCP 80
- B. TCP 5061
- C. UDP 3478
- D. TCP 443
- E. TCP and UDP 50000-59999

Answer: CDE

Explanation:

Purpose	Source IP	Destination IP	Source Port	Destination Port
Session Initiation Protocol (SIP) Signaling	Client	Office 365	Ephemeral ports TCP	443 TCP
Persistent Shared Object Model (PSOM) Web Conferencing	Client	Office 365	Ephemeral ports TCP	443 TCP
HTTPS downloads	Client	Office 365	Ephemeral ports TCP	443 TCP
Audio	Client	Office 365	50000 - 50019 UDP and TCP	443 TCP, 3478 & 3479 UDP, 50000 - 59999 UDP and TCP (optional)
Video	Client	Office 365	50020 - 50039 UDP and TCP	443 TCP, 3478 & 3480 UDP, 50000 - 59999 UDP and TCP (optional)
Desktop Sharing	Client	Office 365	50040 - 50059 UDP and TCP	443 TCP, 3478 & 3481 UDP, 50000 - 59999 UDP and TCP (optional)

References:

<https://support.microsoft.com/en-za/help/2409256/you-can-t-connect-to-skype-for-business-online--or-certain-fe>

NEW QUESTION 208

- (Exam Topic 11)

A company plans to deploy an Office 365 tenant. You have the following requirements:

- ▶ Administrators must be able to access the Office 365 admin center.
- ▶ Microsoft Exchange Online must be used as a Simple Mail Transfer Protocol (SMTP) relay for a line-of-business application that sends email messages to remote domains.
- ▶ All users must be able to use the audio and video capabilities in Microsoft Skype for Business. You need to configure the ports for the firewall.

Which port should you use for each application? Select the correct answer from each list in the answer area. NOTE: Each correct selection is worth one point.

Applications	Port or Ports
SMTP relay	<input type="text"/> TCP 443 TCP 587
Office 365 admin center	<input type="text"/> TCP 80 TCP 443 TCP 10106
Skype (outbound video sessions)	<input type="text"/> TCP/UDP 50000-50019 TCP/UDP 50020-50039 UDP 50040-50059
Skype (outbound audio sessions)	<input type="text"/> TCP/UDP 50000-50019 TCP/UDP 50020-50039 UDP 50040-50059

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Transport Control Protocol(TCP), User Datagram Protocol (UDP) ports, and Protocol Numbers are important to TCP/IP networking, intranets, and the Internet. Ports and protocol numbers provide access to a host computer. However, they also create a security hazard by allowing uninvited access. Therefore, knowing

which port to allow or disable increases a network's security. If the wrong ports or protocol numbers are disabled on a firewall, router, or proxy server as a security measure, essential services might become unavailable.

TCP port 587 is an outgoing SMTP Mail port (TLS/Start TLS Port). Used by various outgoing mail servers as an alternative to port 25.

TCP port 443 is used for Audio, video and application sharing sessions as well as data sharing sessions. RTP/UDP port 50020-50039 must be used for outbound video sessions.

RTP/UDP port 50000-50019 must be used for outbound audio sessions. References:

<https://support.office.com/en-us/article/Office-365-URLs-and-IP-address-ranges-8548a211-3fe7-47cb-abb1-355> <https://www.speedguide.net/port.php?port=587>

NEW QUESTION 211

- (Exam Topic 11)

You are the system administrator for a company. You plan to move users email to Office 365. You add a custom domain for the company to Office 365.

You need to configure the new Office 365 tenant and move ownership of the on-premises DNS zone to Office 365.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer area
Change the NS records for the domain to the microsoftonline.com domain.	
Verify the domain on the company's DNS servers.	
Add a DNS TXT record for verification.	
Verify the domain in the Office 365 portal.	
Change the NS records for the domain to the onmicrosoft.com domain.	
Add a DNS NS record for verification.	

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Actions	Answer area
Change the NS records for the domain to the microsoftonline.com domain.	
Change the NS records for the domain to the onmicrosoft.com domain.	1 Verify the domain in the Office 365 portal.
Add a DNS NS record for verification.	2 Verify the domain on the company's DNS servers.
	3 Add a DNS TXT record for verification.

NEW QUESTION 214

- (Exam Topic 11)

An organization migrates to Office 365.

The Office 365 administrator must be notified when Office 365 maintenance activities are planned. You need to configure the administrator's computer to receive the notifications.

What should you configure?

- A. Office 365 Business Connectivity Service
- B. Service requests
- C. Service health page
- D. Office 365 Service Health RSS Notifications feed

Answer: D

Explanation:

You can log in to Office 365 as an Office 365 Administrator and view the Service Health Page to view the status of your Office 365 services. You can use the Service Health Page to view information on the status of your services for the current day or you can select the last 6 days or 30 days for a historical view. In the top right corner of the Service Health page, there is an RSS icon. You can click on the RSS icon to sign up for the service health RSS feed, which will email you when a new event is added or an existing event is updated.

NEW QUESTION 218

- (Exam Topic 11)

You are implementing a hybrid deployment of Office 365.

You discover that users who have migrated to Office 365 cannot view the free/busy information of users who are hosted on the Microsoft Exchange Server on-premises environment. The Exchange on-premises users can view the free/busy information of all users.

You need to ensure that the users who have Office 365 mailboxes can view the free/busy information of users who have Exchange on premises mailboxes.

Which node should you modify from the Exchange Management Console?

- A. Microsoft Exchange On-Premises - Organization Configuration

- B. Microsoft Exchange On-Premises - Server Configuration
- C. Microsoft Exchange On-Premises - Recipient Configuration
- D. Office 365 - Organization Configuration
- E. Office 365 - Recipient Configuration

Answer: A

Explanation:

References: [https://technet.microsoft.com/en-us/library/aa997669\(v=exchg.141\).aspx](https://technet.microsoft.com/en-us/library/aa997669(v=exchg.141).aspx)

NEW QUESTION 222

- (Exam Topic 11)

Contoso, Ltd, has an Office 365 tenant. You configure Office 365 to use the domain contoso.com, and you verify the domain. You deploy and configure Active Directory Federation Services (AD FS) and Azure Active Directory Connect with password synchronization. You connect to Azure Active Directory by using a Remote Windows PowerShell session.

You need to switch from using AD FS to using password-synced passwords on the Office 365 verified domain.

Which Windows PowerShell command should you run?

- A. Convert-MsolDomainToFederated -DomainName contoso.com
- B. Convert-MsolDomainToStandard -DomainName contoso.com
- C. Convert-MsolFederatedUser
- D. Set-MsolDomainAuthentication -DomainName contoso.com

Answer: B

Explanation:

To switch large sets of users from federated authentication to managed authentication with password sync you can use the Entire namespace conversion approach. To convert the desired namespace from Federated to Managed, you have to use the Convert-MsolDomainToStandard cmdlet.

References:

<https://social.technet.microsoft.com/wiki/contents/articles/17857.dirsync-how-to-switch-from-single-sign-on-to->

NEW QUESTION 224

- (Exam Topic 11)

You have an Office 365 subscription and an on-premises deployment of Active Directory. The environment also contains a deployment of Active Directory Federation Services (AD FS).

The AD FS deployment contains an AD FS server named ADFS1 and a Web Application Proxy server named WAPSERVER1.

The service communications certificate expires in one day.

You need to replace the certificate on the servers in the AD FS deployment. The solution must maintain client encryption.

Actions

Answer Area

On ADFS1, run the **Set-AdfsSslCertificate** cmdlet and the **Set-AdfsCertificate** cmdlet.

1

Install a new self-signed certificate on each server.

2

Install a new certificate from a trusted third-party certification authority (CA) on each server.

3

On WAPSERVER1, run the **Set-WebApplicationProxySslCertificate** cmdlet.

On ADFS1, run the **Update-AdfsCertificate** cmdlet

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Actions	Answer Area
On ADFS1, run the Set-AdfsSslCertificate cmdlet and the Set-AdfsCertificate cmdlet.	1 Install a new certificate from a trusted third-party certification authority (CA) on each server.
Install a new self-signed certificate on each server.	2 On ADFS1, run the Set-AdfsSslCertificate cmdlet and the Set-AdfsCertificate cmdlet.
Install a new certificate from a trusted third-party certification authority (CA) on each server.	3 On WAPSERVER1, run the Set-WebApplicationProxySslCertificate cmdlet.
On WAPSERVER1, run the Set-WebApplicationProxySslCertificate cmdlet.	
On ADFS1, run the Update-AdfsCertificate cmdlet	

NEW QUESTION 227

- (Exam Topic 11)

You plan to use Office 365 FastTrack to deploy an Office 365 tenant.

Which action should you perform for each phase? To answer, drag the appropriate actions to the correct phases. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer Area		
Actions	Phase	Name
Plan	Phase 1	Action

NEW QUESTION 230

- (Exam Topic 11)

You have an on-premises Exchange organization. The organization plans to migrate to Exchange Online. Users report that after their mailboxes are migrated to Exchange Online they are no longer able to send email to a specific dynamic distribution list. All other distribution lists work as expected. You need to resolve the issue. What should you do?

- A. In the Active Directory Synchronization Services console, change the connector filter to include dynamic distribution lists.
- B. In Office 365, re-create the dynamic distribution list.
- C. Run the following Windows PowerShell cmdlet: Set-DynamicDistributionGroup
- D. Reduce the number of members in the distribution list to fewer than 1,500 contacts.

Answer: C

Explanation:

PROBLEM

You have a hybrid deployment of Exchange Online in Office 365 and on-premises Exchange Server. In this environment, certain members of a dynamic distribution group do not receive email messages.

CAUSE

This problem occurs if the dynamic distribution group was set up before the environment became a hybrid deployment and if the dynamic distribution group uses filters to include only mailboxes. Mailboxes that are migrated to Office 365 become mail-enabled users in the on-premises directory.

SOLUTION

Use the Set-DynamicDistributionGroup cmdlet to update the filters for the dynamic distribution group to include mail-enabled users.

References: <https://support.microsoft.com/en-us/kb/3061396>

NEW QUESTION 233

- (Exam Topic 11)

Your company uses Office 365 and has an Enterprise E3 license plan. Employees are issued laptop computers that are configured with a standard image. The image includes an installation of Office 365 ProPlus that must be activated by the employees. An employee recently received a new laptop computer to replace an older laptop.

The older laptop will be reimaged.

When the employee attempts to start Word for the first time, she receives a message saying that she cannot activate it because she has already activated five devices.

You need to help the employee activate Office on her new laptop computer. What should you do?

- A. Assign a second E3 license to the employee.
- B. Remove the employee's E3 license and then assign a new E3 license.
- C. Sign in to the Office 365 portal as the employee and deactivate the old laptop.
- D. Sign in to the Office 365 portal by using your Global Admin account and then deactivate the old laptop.

Answer: D

Explanation:

Deactivating Office on a particular device for a specific user can be done with either logging in as the employee and deactivating it, or by using your Global Admin account.

Sign into the Office 365 Portal -> Users -> Active Users -> Select User Name -> Edit Office Installations and pick the device you want to remove.

<https://support.office.com/en-us/article/Remove-a-former-employee-from-Office-365-44d96212-4d90-4027-9aa>

NEW QUESTION 235

- (Exam Topic 11)

Contoso, Ltd., uses SharePoint Online and plans a new single sign-on (SSO) implementation that uses Active Directory Federation Services (AD FS). Your environment contains the following configurations:

- two servers named Server1 and Server2

- ▶ a partner collaboration website for the domain contoso.com that points to a SharePoint Online team site
- ▶ a hardware load balancer to use with Server1 and Server2

You need to install AD FS to support the environment.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Run the following Windows PowerShell cmdlet on Server1:
Install-AdfsFarm -FederationServiceName contoso.com
- Run the following Windows PowerShell cmdlet on Server2:
Add-AdfsFarmNode
- Request and install a secure sockets layer (SSL) certificate on Server1 and Server2.
- Run the following Windows PowerShell cmdlet on Server1:
Install-AdfsFarm -FederationServiceName fs.contoso.com
- Run the following Windows PowerShell cmdlet on Server2:
Add-ClusterNode

Answer Area

1

2

3

Navigation arrows: > < (between actions and answer area), ^ v (between answer boxes)

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Example: Creates the first node in a federation server farm that uses the Windows Internal Database(WID) on the local server computer. In this example, a certificate thumbprint value is supplied for the CertificateThumbprint parameter. This certificate will be used as the SSL certificate and the service communications certificate.

```
PS C:\> $fscredential= Get-Credential
PS C:\> Install-AdfsFarm -CertificateThumbprint 8169c52b4ec6e77eb2ae17f028fe5da4e35c0bed
-FederationServiceName fs.corp.contoso.com -ServiceAccountCredential $fscredential
```

Install-AdFsFarm command creates the first node of a new federation serverfarm.

- / The parameter -CertificateThumbprint<String> Specifies the value of the certificate thumbprint of the certificate that should be used in the Secure Sockets Layer (SSL) binding of the Default Web Site in Internet Information Services (IIS). This value should match the thumbprint of a valid certificate in the Local Computer certificate store.
- / The parameter -FederationServiceName<String> Specifies the DNSname of the federation service. This value must match the subject name of the certificate configured on the SSL binding in IIS.

The Add-AdfsFarmNode command adds this computer to an existing federation server farm. References:
[https://technet.microsoft.com/en-us/library/dn479416\(v=wps.630\).aspx](https://technet.microsoft.com/en-us/library/dn479416(v=wps.630).aspx)

NEW QUESTION 240

- (Exam Topic 11)

You are the administrator for a company named Contoso, Ltd. The company has an Office 365 subscription. You need to prevent users from changing their user display name by using Outlook Web App. What should you do?

- A. Run the Set-MsolCompanyContactInformation cmdlet.
- B. Modify the default email address policy.
- C. Run the Set-MsolUserPrincipalName cmdlet.
- D. Modify the default role assignment policy.

Answer: D

Explanation:

References:
<http://help.outlook.com/en-us/140/ff852817.aspx>

NEW QUESTION 241

- (Exam Topic 11)

You are the administrator for a company. You plan to use Office 365 for email and file sharing. You plan to implement a hybrid deployment with your current on-premises Active Directory Domain Services (AD DS) environment and Microsoft Azure Active Directory (Azure AD) Connect. You must deploy Microsoft Exchange Online and OneDrive for Business for all employees. You have the following security requirements: All employees must use complex passwords. Passwords must be changed every six months. Employees must use multi-factor authentication (MFA) when possible. You need to implement MFA verification options to use with the employee's password. Solution: Have the employee use a physical smart card. Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 243

- (Exam Topic 11)

Your company has an Office 365 Small Business subscription. You are the Microsoft SharePoint Online administrator. The company wants to have two separate public websites with different URLs. What should you do?

- A. Upgrade to SharePoint Online for Office 365 Enterprise, Education, and Government.
- B. Create one public website and one subsite, and then configure a redirect.
- C. Create two public websites and configure the DNS records for each site.
- D. Upgrade to SharePoint Online for Office 365 Midsize Business.

Answer: B

Explanation:

References:
<http://www.toddklindt.com/blog/Lists/Posts/Post.aspx?ID=48>

NEW QUESTION 248

- (Exam Topic 11)

Contoso, Ltd. has an Office 365 tenant. The company has two servers named Server1 and Server2 that run Windows 2012 R2 Server. The servers are not joined to the contoso.com domain. Server2 is deployed to the perimeter network. You install Secure Sockets Layer (SSL) certificates on both servers. You must use Integrated Windows authentication. You need to install and configure all AD FS components in the environment. Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Join Server1 and Server2 to the contoso.com domain.

Install and configure AD FS on Server1.

Run the following Windows PowerShell cmdlet on Server2:
Install-WindowsFeature

Run the following Windows PowerShell cmdlet on Server2:
Install-WebApplicationProxy

Run the following Windows PowerShell cmdlet on Server2:
Install-AdfsFarm

Join Server1 to the contoso.com domain.

Run the following Windows PowerShell cmdlet on Server2:
New-WebApplication

Answer Area

>
<

↑
↓

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Install and Configure AD FS on Server1. Box 2: Join Server1 to the contoso.com domain

Box 3: Run the following Windows PowerShell cmdlet on Server2: Install-WindowsFeature

Box 4: Run the following Windows PowerShell cmdlet on Server2: Install-WebApplicationproxy

Note:

Prepare the Base Servers Box 1, Box 2: AD FS Server

Box 3, Box 4: AD FS Proxy Server

Once the necessary WAP role services are installed, we are then able to launch the Web Application Proxy Wizard to configure WAP.

Note:

NEW QUESTION 250

- (Exam Topic 11)

You have an Office 365 tenant that has an Enterprise E3 subscription. You enable Azure Rights Management for users in the tenant.

You need to define the methods that you can implement to encrypt and decrypt email messages.

What should you do? To answer, drag the appropriate method to the correct action. Each method may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer Area

		Action	Method
Transport rule	Organization account	Send encrypted email	<input type="text"/>
One-time password	Text message	Receive encrypted replies	<input type="text"/>
Connector		View encrypted email	<input type="text"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

As an Office 365 global administrator, you can create mail flow rules, also known as transport rules, to help protect email messages you send and receive. You can set up rules to encrypt any outgoing email messages and remove encryption from encrypted messages coming from inside your organization or from replies to encrypted messages sent from your organization.

To view encrypted messages, recipients can either get a one-time password, sign in with a Microsoft account, or sign in with a work or school account associated with Office 365. Recipients can also send encrypted replies. They don't need an Office 365 subscription to view encrypted messages or send encrypted replies.

References:

<https://technet.microsoft.com/en-us/library/dn569289.aspx> <https://technet.microsoft.com/en-us/library/dn569287.aspx>

NEW QUESTION 254

- (Exam Topic 11)

You deploy Microsoft Azure Active Directory (Azure AD) Connect. You configure single sign-on (SSO). The company temporarily loses their connection to the Internet. Mobile users are unable to access the Office 365 environment due to authentication failures.

You need to ensure that users who are outside the corporate network can access the Office 365 environment while minimizing administrative effort.

What should you do?

- A. Change each user's password in the Office 365 Admin portal.
- B. Enable password synchronization as a temporary fallback from federated authentication.
- C. Disable Azure AD Connect.
- D. Disable password synchronization in the Office 365 Admin portal.

Answer: B

Explanation:

References:

<https://social.technet.microsoft.com/wiki/contents/articles/17857.dirsync-how-to-switch-from-single-sign-on-to->

NEW QUESTION 257

- (Exam Topic 11)

Your organization has an Office 365 subscription. Microsoft Azure AD Connect is deployed to the organization.

You need to deploy Active Directory Federation Services (AD FS) to meet the following requirements:

- ▶ Use an AD FS namespace of sts.fabrikam.com.
- ▶ Allow mobile devices to connect from untrusted networks and prevent all other devices from connecting from untrusted networks.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions		Answer Area	
Install a third-party certificate.			
Modify the Active Directory claims provider trust.			
Modify the relying party trust for the Microsoft Office 365 Identity Platform.	⬅		⬆
Run the AD FS Federation Server Configuration Wizard.	➡		⬇
Federate the AD FS domain.			

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Step 1: Install a third-party certificate.

Since AD FS leverages SSL, we need to have a SSL certificate.

Before starting the AD FS configuration wizard install a third-party certificate. Step 2: Run the AD FS Federation Server Configuration Wizard.

Step 3: Federate the AD FS Domain

We must change the Office 365 domain to be a federated domain.

Step 4: Modify the relying party trust for the Microsoft Office 365 Identity Platform

After enabling claims-based authentication, the next step is to add and configure the claims provider and relying party trusts in AD FS.

After you enable claims-based authentication, you must configure Microsoft Dynamics 365 Server as a relying party to consume claims from AD FS for authenticating internal claims access.

References:

<https://blogs.technet.microsoft.com/rmilne/2014/04/28/how-to-install-adfs-2012-r2-for-office-365/> <https://technet.microsoft.com/en-us/library/gg188595.aspx>

NEW QUESTION 260

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You deploy Office 365 for all company users. You use Microsoft Exchange Online for company email. You must develop a process to assign licenses to new users in your company.

You need to implement the licensing process. Solution: Use the Exchange Control Panel.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

Licenses can be assigned from Office 365 admin center, or PowerShell. References:

<https://support.office.com/en-gb/article/plan-for-multi-factor-authentication-for-office-365-deployments-043807> <https://support.office.com/en-gb/article/set-up-multi-factor-authentication-for-office-365-users-8f0454b2-f51a-4>

NEW QUESTION 264

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Office 365 subscription.

All of the users in your tenant are assigned an E5 license.

You need to view the list of planned updates for Microsoft Skype for Business Online.

Solution: You open the Skype for Business admin center and you review the contents of the dashboard. Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

Office 365 admin center allows you to view the health of the Skype for Business Online service, change and release notifications, and usage reports.

References:

<https://support.office.com/en-us/article/About-the-Skype-for-Business-admin-role-aeb35bda-93fc-49b1-ac2c-c7>

NEW QUESTION 268

- (Exam Topic 11)

Contoso, Ltd. has an Office 365 Tenant. The company plans to implement single sign-on (SSO). You install Active Directory Federation Services.

You need to enable the use of SSO.

How should you complete the relevant Windows PowerShell commands? To answer, select the appropriate Windows PowerShell segment from each list in the answer area.

Answer Area

\$cred= Get-Credential

▼

Default Office 365 admin
Active Directory Enterprise admin

Connect-MsolService- Credential \$cred

▼

Convert-MsolDomainToStandard
Convert-MsolDomainToFederated

-DomainName contoso.com

-SkipUserConversation \$false

-PasswordFile c:\password.txt

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

See step 2) and step 5) below.

To convert an existing domain to a single sign-on domain, follow these steps. References: <https://msdn.microsoft.com/en-us/library/azure/jj205461.aspx>

NEW QUESTION 272

- (Exam Topic 11)

A company has an Office 365 tenant that has an Enterprise E1 subscription. You plan to test a new deployment by using 50 tenant user accounts.

You need to ensure that the passwords for the test user accounts do not expire. Which Windows PowerShell cmdlet should you run?

- A. Set-MsolUser
- B. Redo-MsolProvisionUser
- C. Set-MsolUserLicense
- D. Set-MsolUserPrincipalName
- E. Convert-MsolFederatedUser
- F. Set-MailUser
- G. Set-LinkedUser
- H. New-MsolUser

Answer: A

Explanation:

The Set-MsolUser cmdlet is used to update a user object. This cmdlet should be used for basic properties only. Parameter -PasswordNeverExpires <Boolean> Sets whether or not the user's password will expire periodically. References: <https://docs.microsoft.com/en-us/powershell/module/msonline/set-msoluser?view=azureadps-1.0>

NEW QUESTION 276

- (Exam Topic 11)

You have an Office 365 subscription.

The Office 365 organization contains five temporary administrators. The administrators are members of multiple role groups.

You need to create a script that prevents the temporary administrators from performing administrative tasks from the Office 365 admin center. The solution must meet the following requirements:

- Release the Office 365 licenses assigned to the temporary administrators.

Which cmdlet should you run? To answer, select the appropriate options in the answer area.

Answer Area

<div style="text-align: right; border-bottom: 1px solid black; padding-bottom: 2px;"> v </div> <div style="padding: 5px;"> <p>Remove-MsolUser Set-MsolUser Set-MsolUserLicense</p> </div>	-UserPrincipalName User1, User2, User3,User4, User5	<div style="text-align: right; border-bottom: 1px solid black; padding-bottom: 2px;"> v </div> <div style="padding: 5px;"> <p>-BlockCredential \$true -Force -RemoveLicenses</p> </div>
---	---	---

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Set-MsolUserLicense cmdlet can be used to adjust the licenses for a user. This can include adding a new license, removing a license, updating the license options, or any combination of these actions.

Example:

The following command removes the for enterprises license from the user. This may result in the user's data being removed from each service.

Set-MsolUserLicense -UserPrincipalName user@contoso.com -RemoveLicenses "contoso:ENTERPRISEPACK"

References: [https://msdn.microsoft.com/en-us/library/azure/dn194094\(v=azure.98\).aspx](https://msdn.microsoft.com/en-us/library/azure/dn194094(v=azure.98).aspx)

NEW QUESTION 277

- (Exam Topic 11)

You configure an Office 365 tenant in a Microsoft Exchange hybrid scenario.

IT department user mailboxes reside in Exchange Online. All other user mailboxes reside in Exchange Server 2016.

You need to monitor Exchange services for the IT department users. What should you use?

- A. Exchange Online admin center
- B. Active Directory Administrative Center
- C. Office 365 admin center
- D. Microsoft Azure PowerShell cmdlet Get-ServerHealth.

Answer: C

NEW QUESTION 278

- (Exam Topic 11)

You are the Office 365 administrator for a company. You plan to implement Microsoft SharePoint Online, Exchange Online, and Skype for Business Online. End users will only use Outlook on the web for accessing email.

All outbound Internet connections for clients are blocked by default. You create inbound allow rules for the list of IPs that need to be exclude6 for Office 365.

You need to configure the outbound network ports that are required for client devices to connect to Office 365. Which two ports should you configure? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. 25
- B. 80
- C. 110
- D. 443

Answer: BD

NEW QUESTION 280

- (Exam Topic 11)

You have an on-premises Exchange organization. The organization plans to migrate to Office 365. You need to identify a group of users to designate as the pilot group.

Which factor makes a user a poor choice to be included in the pilot group?

- A. users who use Android devices
- B. users who are delegates for multiple mailboxes
- C. users who need access to public folders on Exchange 2007 servers
- D. users who receive fewer than 25 email messages per day

Answer: C

Explanation:

Users who have a dependency on resources that are still on-premises are not considered good candidates a pilot as they require send-as and receive as permissions on those resources.

References: <https://books.google.co.za/books?id=aaU2DwAAQBAJ&pg=PA84&lpg=PA84&dq=exchange+online+pilot+gr>

NEW QUESTION 285

- (Exam Topic 11)

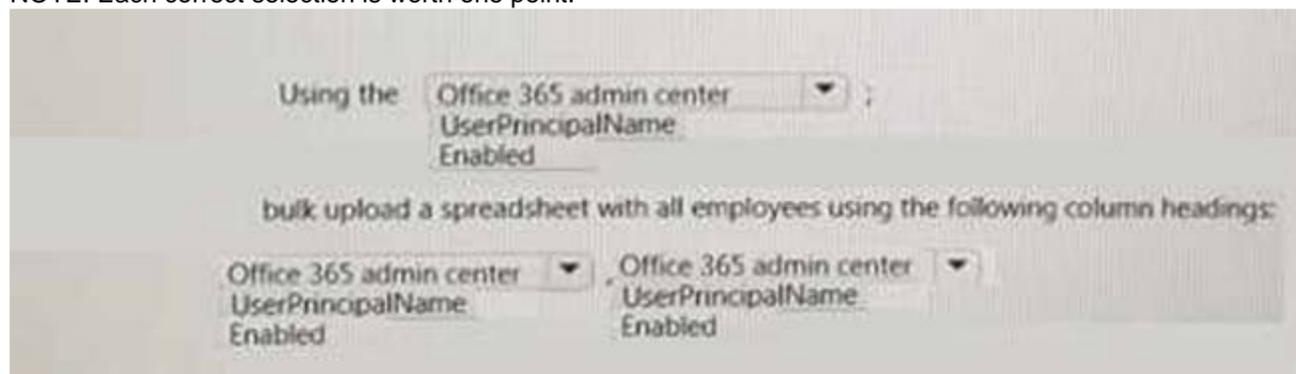

You manage the Office 365 environment for Contoso Ltd. All employees use Microsoft Exchange Online for email.

All employees must use multi-factor authentication (MFA) to access email. You configure MFA for the Office 365 environment.

You need to configure MFA for all company employees.

What should you do? To answer, select the appropriate options in the dialog box in the answer area.

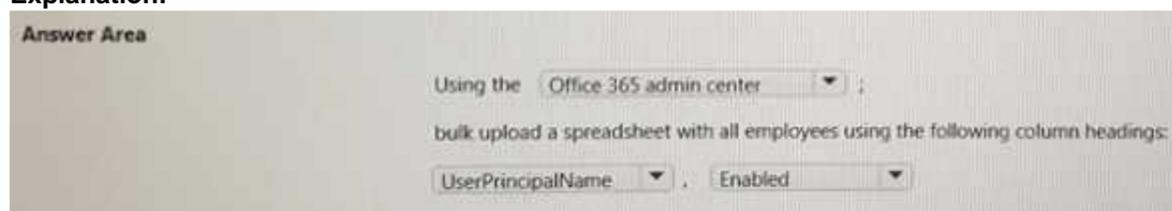

NOTE: Each correct selection is worth one point.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 290

- (Exam Topic 11)

You have an Office 365 subscription.

You deploy Microsoft Azure multi-Factor authentication for all users.

Which three methods can the users use to verify their identity? Each correct answer presents a complete solution.

- A. Use a verification code from an email message sent to your primary SMTP address.
- B. Use a verification code from a mobile app.
- C. Make a verification phone call to your authenticated phone number.
- D. Use a verification code from an instant message sent to your registered SIP address.
- E. Make a verification phone call to your office phone number.

Answer: ABC

Explanation:

MFA for Office 365 requires users to acknowledge a phone call, text message, or app notification on their smart phones after correctly entering their passwords.

References:

<https://support.office.com/en-us/article/Set-up-multi-factor-authentication-for-Office-365-users-8f0454b2-f51a->

NEW QUESTION 292

- (Exam Topic 11)

You have an Office 365 tenant that uses an Enterprise E3 subscription. You activate Azure Rights Management for the tenant.

You must test the service with the Development security group before you deploy Azure Rights Management for all users.

You need to enable Azure Rights Management for only the Development security group. Which Windows PowerShell cmdlet should you run?

- A. Enable-Aadrm
- B. New-AadrmRightsDefinition
- C. Enable-AadrmSuperUserFeature
- D. Add-AadrmSuperUser
- E. Set-AadrmOnboardingControlPolicy

Answer: E

Explanation:

The Set-AadrmOnboardingControlPolicy cmdlet sets the policy that controls user on-boarding for Azure Rights Management. This cmdlet supports a gradual deployment by controlling which users in your organization can protect content by using Azure Rights Management.

Example:

Restrict Azure RMS to users who are members of a specified group

This command allows only users that are members of the security group with the specified object ID to protect content by using Azure Rights Management. The command applies to Windows clients and mobile devices.

Windows PowerShell

PS C:\> Set-AadrmOnboardingControlPolicy -UseRmsUserLicense \$False -SecurityGroupObjectId "f References:

<https://docs.microsoft.com/en-us/powershell/module/aadrm/set-aadrm-onboarding-control-policy?view=azureipps>

NEW QUESTION 295

- (Exam Topic 11)

You implement single sign-on (SSO) between Office 365 and an on-premises deployment of Active Directory. You need to configure Active Directory Federation Services (AD FS) to prevent users from being able to log

on for 30 minutes after they attempt to log on by using a bad password 10 consecutive times.

What command should you run? To answer, select the appropriate options in the answer area.

Answer Area

▼

**Self-Adfsclient
Set-AdfsProperties
Set-AdfsEndPoint**

-EnableExtranetLockout \$true

▼

**-ExtranetLockoutThreshold
-ExtranetObservationWindow
-ExtendedProtectionTokenCheck**

10

▼

**-ExtranetLockoutThreshold
-ExtranetObservationWindow
-ExtendedProtectionTokenCheck**

(new-timespan -Minutes 30)

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

An example of enabling ExtranetLockout feature with maximum of 10 number of bad password attempts and 30 mins soft-lockout duration is as follows:

Set-AdfsProperties-EnableExtranetLockout \$true -ExtranetLockoutThreshold 10

-ExtranetObservationWindow (new-timespan -Minutes 30)

References:

<https://blogs.msdn.microsoft.com/luzhao1/2015/06/24/demystify-extranet-lockout-feature-in-ad-fs-3-0/>

NEW QUESTION 299

- (Exam Topic 11)

You have a SharePoint Online tenant. A user named User1 manages several site collections. User1 must be able to view the following information for the site collections:

- a list of site administrators
- the number of subsites in a site collection
- storage and usage quotas

You need to ensure that User1 can view the requested reports while minimizing the privileges that you grant to User1.

Which two permission levels can you assign to User1? Each correct answer presents a complete solution.

- A. Global admin
- B. SharePoint Online admin
- C. Site Collection admin
- D. Site admin

- E. User management admin
- F. Service admin

Answer: BC

Explanation:

C: The Site collection administrator has permissions to manage a site collection.
 B: Here are some of the key tasks users can do when they are assigned to the SharePoint Online admin role:

- ▶ Create site collections
- ▶ Manage site collections and global settings
- ▶ Assign site collection administrators to manage site collections
- ▶ Manage site collection storage limits
- ▶ Manage SharePoint Online user profiles

References:
<https://support.office.com/en-us/article/About-the-SharePoint-Online-admin-role-f08144d5-9d50-4922-8e77-4e>

NEW QUESTION 300

- (Exam Topic 11)

A company has an Office 365 tenant. You install the Microsoft Azure Active Directory module for Windows PowerShell. An employee leaves the company. The employee's account is named user1@contoso.com. You need to hard delete the user's account. How should you complete the relevant Windows PowerShell commands? To answer, select the appropriate Windows PowerShell segments from each list in the answer area.
 NOTE: Each correct selection is worth one point.

Answer Area

\$Credential = Get-Credential

-Credential \$Credential

- New-PSSession
- Enter-PSSession
- Connect-PSSession
- Connect-MsolService

-UserPrincipalName user1@contoso.com

- Remove-ADUser
- Remove-MsolUser
- Remove-ADObject

- Force
- IncludeDeletedObjects
- RemoveFromRecycleBin

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Connect-MsolService cmdlet attempts to establish a connection to Azure Active Directory. Running the Remove-MsolUser cmdlet with the -UserPrincipalName <String>-RemoveFromRecycleBin parameters will remove a specific user from Azure Active Directory permanently.

References:
<https://docs.microsoft.com/en-us/powershell/module/msonline/remove-msoluser?view=azureadps-1.0>

NEW QUESTION 305

- (Exam Topic 11)

You manage an on-premises Active Directory environment. You implement an Office 365 tenant. Password requirements for the environments are listed in the table below.

Environment	Password requirements
On-premises Active Directory	Accounts expire after 180 days. Passwords expiration notifications must be sent 7 days before a password expires.
Office 365	Accounts expire after 90 days. Passwords expiration notifications must be sent 21 days before a password expires.

You deploy Microsoft Azure Active Directory (Azure AD) Connect and configure synchronization between Office 365 and the on-premises Active Directory. You need to determine the resulting policies for Office 365 users.

Which password policies will take effect? To answer, drag the appropriate values to the correct policies. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
 NOTE: Each correct selection is worth one point.

Values	Policy	Value
0	Account expiration	Value days
7	Password expiration notification	Value days
14		
21		
45		
90		
180		

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

If your organization uses the accountExpires attribute as part of user account management, be aware that this attribute is not synchronized to Azure AD. As a result, an expired Active Directory account in an environment configured for password synchronization will still be active in Azure AD. When password synchronization is enabled, the password complexity policies in your on-premises Active Directory instance override complexity policies in the cloud for synchronized users. You can use all of the valid passwords from your on-premises Active Directory instance to access Azure AD services.

References:

<https://scottcroucher.com/2017/08/11/implement-password-synchronization-with-azure-ad-connect-sync/>

NEW QUESTION 307

- (Exam Topic 12)

You need to configure the collaboration environment for the ADatum sales employees. What should you configure?

- A. Microsoft Flow with a Twitter connector
