Microsoft

Exam Questions MS-600

Building Applications and Solutions with Microsoft 365 Core Services

NEW QUESTION 1
- (Exam Topic 1)
Which URI should you use to query all the emails that relate to an invoice?

A. Option A
B. Option B
C. Option C
D. Option D

Answer: A

NEW QUESTION 2
- (Exam Topic 1)
Which type of authentication flow should you recommend for the planned integration with Office 365?

A. device code
B. implicit grant
C. authorization code
D. client credentials

Answer: C

Explanation:
To use Microsoft Graph to read and write resources on behalf of a user, your app must get an access token from the Microsoft identity platform and attach the token to requests that it sends to Microsoft Graph.
One common flow used by native and mobile apps and also by some Web apps is the OAuth 2.0 authorization code grant flow.
Scenario: Email the generated invoices to customers on behalf of the current signed-in user. Any emails generated by the system will contain the invoiced.
Use Azure AD to manage identities, authentication, and authorization. Reference: https://docs.microsoft.com/en-us/graph/auth-v2-user

NEW QUESTION 3
- (Exam Topic 1)
You need to implement the role functionality for the backend web service calls.
Which three actions should you perform in sequence? To answer, move the actions from the list of actions to the answer area and arrange them in the correct order.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 4
- (Exam Topic 1)
What are two possible URIs that you can use to configure the content administration user interface? Each correct answer present a complete solution.
NOTE: Each correct selection is worth one point.

A. Option A
B. Option B
C. Option C
D. Option D

Answer: BC

NEW QUESTION 5
- (Exam Topic 1)
You need to complete the MSAL.js code for SSO. Which code segment should you insert at line 06?

A. storeAuthStateInCookie: false
B. storeAuthStateInCookie: true
C. cacheLocation: 'localStorage'
D. cacheLocation: 'sessionStorage'

Answer: C

Explanation:
Scenario: Implement single sign-on (SSO) and minimize login prompts across browser tabs.
When your application is open in multiple tabs and you first sign in the user on one tab, the user is also signed in on the other tabs without being prompted.
MSAL.js caches the ID token for the user in the browser localStorage and will sign the user in to the application on the other open tabs.
By default, MSAL.js uses sessionStorage which does not allow the session to be shared between tabs. To get SSO between tabs, make sure to set the cacheLocation in MSAL.js to localStorage.
Reference: https://docs.microsoft.com/bs-latn-ba/Azure/active-directory/develop/msal-js-sso

NEW QUESTION 6
- (Exam Topic 2)
You need to develop an add-in for Microsoft Excel that can be used from the Windows, Mac, and web versions of Excel.
What are two ways to develop the add-in? Each correct answer presents a complete solution?

NOTE: Each correct selection is worth one point.

A. From Microsoft Teams, install App Studio
B. From Microsoft Visual Studio that has the Microsoft Office/SharePoint development workload installed, create a new project that uses a Web Add-in template
C. From the Microsoft Office 365 portal, use Microsoft PowerApps
D. Use the Yeoman generator for Microsoft Office Add-ins to create the project, and then open the project in Microsoft Visual Studio Code
E. From Microsoft Visual Studio that has the Microsoft Office/SharePoint development workload installed, create a new project that uses a Visual Studio Tools for Office (VSTO) template

Answer: DE

Explanation:
D: Run the following command to create an add-in project using the Yeoman generator: yo office
Visual Studio Code is a great tool to help you develop your custom Office Add-ins regardless if they are for Outlook, Word, Excel, PowerPoint and run in the web clients, Windows clients, iOS clients or on macOS.
Open the project in Visual Studio Code by entering the following on the command line from within the same folder where you ran the generator:
code.
E: You can create VSTO Add-ins for Excel.
To create a new Excel VSTO Add-in project in Visual Studio

 Start Visual Studio.
 On the File menu, point to New, and then click Project.
 In the templates pane, expand Visual C# or Visual Basic, and then expand Office/SharePoint.
 Under the expanded Office/SharePoint node, select the Office Add-ins node.
 In the list of project templates, select Excel 2010 Add-in or Excel 2013 Add-in.
 In the Name box, type FirstExcelAddIn.
 Click OK.
Visual Studio creates the FirstExcelAddIn project and opens the ThisAddIn code file in the editor. References: https://docs.microsoft.com/en-us/office/dev/add-ins/tutorials/excel-tutorial https://code.visualstudio.com/docs/other/office#_use-visual-studio-code-to-develop-your-office-addin https://docs.microsoft.com/en-us/visualstudio/vsto/walkthrough-creating-your-first-vsto-add-in-for-excel

NEW QUESTION 7
- (Exam Topic 2)
You have a custom Microsoft Word add-in that was written by using Microsoft Visual Studio Code. A user reports that there is an issue with the add-in.
You need to debug the add-in for Word Online.
What should you do before you begin debugging in Visual Studio Code?

A. Disable script debugging in your web browser
B. Sideload the add-in
C. Publish the manifest to the Microsoft SharePoint app catalog
D. Add the manifest path to the trusted catalogs

Answer: C

Explanation:
Debug your add-in from Excel or Word on the web
To debug your add-in by using Office on the web (see step 3):
* 12.Deploy your add-in to a server that supports SSL.
* 13. In your add-in manifest file, update the SourceLocation element value to include an absolute, rather than a relative, URI.
* 14. Upload the manifest to the Office Add-ins library in the app catalog on SharePoint.
* 15. Launch Excel or Word on the web from the app launcher in Office 365, and open a new document.
* 16.On the Insert tab, choose My Add-ins or Office Add-ins to insert your add-in and test it in the app.
* 17.Use your favorite browser tool debugger to debug your add-in.
Reference: https://docs.microsoft.com/en-us/office/dev/add-ins/testing/debug-add-ins-in-office-online

NEW QUESTION 8
- (Exam Topic 2)
You need to develop a server-based web app that will be registered with the Microsoft identity platform. The solution must ensure that the app can perform operations on behalf of the user?
Which type of authorization flow should you use?

A. authorization code
B. refresh token
C. resource owner password
D. device code

Answer: A

Explanation:
In web server apps, the sign-in authentication flow takes these high-level steps:

You can ensure the user's identity by validating the ID token with a public signing key that is received from the Microsoft identity platform endpoint. A session cookie is set, which can be used to identify the user on subsequent page requests.
In addition to simple sign-in, a web server app might need to access another web service, such as a REST API. In this case, the web server app engages in a combined OpenID Connect and OAuth 2.0 flow, by using the OAuth 2.0 authorization code flow.
Reference: https://docs.microsoft.com/en-us/azure/active-directory/develop/v2-app-types

NEW QUESTION 9
- (Exam Topic 2)
This question requires that you evaluate the underlined BOLD text to determine if it is correct.
You develop a Microsoft Teams application that uses a messaging extension. Users can invoke the messaging extension from the Teams sidebar menu.
Instructions: Review the underlined text. If it makes the statement correct, select "No change is needed". If the statement is incorrect, select the answer choice that makes the statement correct.

A. No change is needed
B. from the compose box of a Teams chat
C. by using the Manage teams option for a team
D. by using the Add a tab option in the Teams channel

Answer: B

Explanation:
In the app manifest for your Microsoft Teams app you'll define a single messaging extension with up to ten different commands. Each command defines a type (action or search), and the locations in the client it can be invoked from (compose message area, command bar, and/or message).
Reference:
https://docs.microsoft.com/en-us/microsoftteams/platform/messaging-extensions/what-are-messaging-extension

NEW QUESTION 10
- (Exam Topic 2)
You are developing a Microsoft Office Add-in for Microsoft Word. Which Office UI element can contain commands from the add-in?

A. dialog boxes
B. the Quick Access Toolbar (QAT)
C. context menus
D. task panes

Answer: A

NEW QUESTION 10
- (Exam Topic 2)
You have an API that is secured by using Azure Active Directory (Azure AD). You are designing a SharePoint Framework (SPFx) solution.
Which object should you use to connect to the API from the solution?

A. SPHttpClient
B. HttpClient
C. AadHttpClient

Answer: C

Explanation:
By using the AadHttpClient, you can easily connect to APIs secured by using Azure AD without having to implement the OAuth flow yourself.
Reference: https://docs.microsoft.com/en-us/sharepoint/dev/spfx/use-aadhttpclient

NEW QUESTION 12
- (Exam Topic 2)
You are developing a Microsoft Teams application.
Which Teams feature provides you with the ability to invoke a model popup by using the minimum amount of custom code?

A. An adaptive card
B. A bot
C. A connector
D. A task module

Answer: B

NEW QUESTION 17
- (Exam Topic 2)
You have an application named App1 that is used to administer an Azure Active Directory (Azure AD) tenant. When administrators install Appl, they are prompted for admin consent.
Which application permission can cause the administrators to be prompted for consent?

A. RoleManagemen
B. Read . Directory
C. Device.Command
D. Device.Read
E. Calendars.ReadWrite

Answer: A

NEW QUESTION 22
- (Exam Topic 2)
You have an application that uses the Microsoft graph API.
When users open the application during peak hours, they occasionally receive an HTTP 429 Too Many requests response status code.
What should you to mitigate the errors?

A. Adjust the request rate based on the Rate-Limit-Reset Header.
B. Wait 100 milliseconds between requests.
C. Adjust the request rate based on the Retry-After header.

Answer: C

NEW QUESTION 23
- (Exam Topic 2)
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: No
Box 2: No
The manifest is in XML format.
Box 3: Yes
SourceLocation is required and specifies the source file location(s) for your Office Add-in as a URL between 1 and 2018 characters long. The source location must

be an HTTPS address, not a file path.
References: https://docs.microsoft.com/en-us/office/dev/add-ins/develop/add-in-manifests https://docs.microsoft.com/en-us/office/dev/add-ins/reference/manifest/sourcelocation

NEW QUESTION 25
- (Exam Topic 2)
You are building an application that will help Azure Active Directory (Azure AD) administrators manage Microsoft 365 groups.
You are building a details page that will display information about the groups.
You need to display the groups of which the current group is member. The results must contain the nested groups.
Which URI should you use?

A. Option A
B. Option B
C. Option C
D. Option D
E. Option E

Answer: D

NEW QUESTION 26
- (Exam Topic 2)
HOTSPOT
You are developing an interactive invoicing application that will be used by end users. The application will have the following features:
 Save invoices generated by a user to the user's Microsoft OneDrive.
 Email daily automated reminders.
You need to identify which permissions to grant for the application features. The solution must use the principle of least privilege.
Which permission should you grant for each feature? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

Microsoft identity platform supports two types of permissions: delegated permissions and application permissions.
Box 1: Delegated

Delegated permissions are used by apps that have a signed-in user present. For these apps, either the user or an administrator consents to the permissions that the app requests, and the app is delegated permission to act as the signed-in user when making calls to the target resource.
Box 2: Application

Application permissions are used by apps that run without a signed-in user present; for example, apps that run as background services or daemons. Application permissions can only be consented by an administrator.
Reference: https://docs.microsoft.com/en-us/azure/active-directory/develop/v2-permissions-and-consent

NEW QUESTION 30
- (Exam Topic 2)
You have a starter SharePoint Framework (SPFx) web part.
You need to test the web part from the local workbench by connecting to a URL of https:// localhost:4321/temp/workbench.html.
Which tool should you use make the web part available locally for debugging?

A. Yeoman
B. Microsoft Visual Studio Code
C. npm install
D. gulp serve

Answer: B

Explanation:
By setting up debugging of your SharePoint Framework solution in Visual Studio Code, you can more efficiently step through your code and fix errors.
When building SharePoint Framework solutions, you can use the local workbench to verify that your web part is working correctly. Using the local workbench is convenient for testing all scenarios that do not require communicating with SharePoint as well as for offline development.
Reference: https://docs.microsoft.com/en-us/sharepoint/dev/spfx/debug-in-vscode

NEW QUESTION 34
- (Exam Topic 2)
You are developing a front end web app.
You want to display the current username as part of the user interface.
You need to retrieve the current username from Microsoft Graph by using a REST request. The solution must minimize the amount of information returned.
To which URI should you send the request?

A. Option A
B. Option B
C. Option C
D. Option D

Answer: A

NEW QUESTION 38
- (Exam Topic 2)
You company has a third-party invoicing web app.
You need to display the app within Microsoft Teams for one user only. The app will not require conversational interactions.
How should you display the app by using the minimum amount of effort?

A. Instruct the user to add a website tab
B. Instruct the user to add an App Studio app
C. Create a SharePoint Framework (SPFx) web part
D. Create a search-based messaging extension

Answer: A

Explanation:
There are currently three methods of app integration in Teams: Connectors, Bots, and Tabs. Tabs offer more extensive integration by allowing you to view entire third-party services within Microsoft Teams. Reference: https://www.sherweb.com/blog/office-365/o365-microsoft-teams-apps/

NEW QUESTION 43
- (Exam Topic 2)
You plan to develop a Microsoft Teams bot tghat will return product information to users by using an adaptive card.
You need to card to contain a button that will invoke a web search for the product. What should use?

A. An action-based messaging extension
B. A task module
C. A search-based messaging extension
D. An outgoing webhook

Answer: B

NEW QUESTION 44
- (Exam Topic 2)
You use Azure Active Directory (Azure AD) to store user identities. The user profile information is inconsistently populated.
You need to develop a web app that will provide users with a page where they can enter their interests, skill, and description. When the user click the submit button, the app will use Microsoft graph to send the data to Azure AD.
Which HTTP method should you use against the Microsoft graph endpoint?

A. PUT
B. POST
C. PATCH
D. GET

Answer: A

NEW QUESTION 45
- (Exam Topic 2)
You have a SharePoint Framework (SPFx) web part that displays the weather. Users can set the city within the web part. Which component is invoked to provide the users with the ability to configure the settings for the web part?

A. a custom control
B. the property pane
C. the Application Customizer
D. a library component

Answer: B

NEW QUESTION 49
- (Exam Topic 2)
You have an application that has the code shown in the exhibits. (Click the JavaScript Version tab or the C# Version tab.)
For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.
JavaScript Version

C# Version

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Yes
Unified is specified in the code.
Note: You can create the following types of groups: Office 365 group (unified group)
Security group Box 2: Yes
A member is added to the group. Box 3: No
Box 4: No
Reference: https://docs.microsoft.com/en-us/graph/api/group-post-groups

NEW QUESTION 52
- (Exam Topic 2)
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You are developing a new application named App1 that uses the Microsoft identity platform to authenticate to Azure Active Directory (Azure AD).
Currently, App1 can read user profile information. You need to allow App1 to read the user's calendar.
Solution: From the Azure portal, add the Microsoft Graph API and the Calendar.Read permission by using the API permission list of App1. Grant tenant admin consent.
Does this meet the goal?

A. Yes
B. No

Answer: A

Explanation:
Microsoft Graph Calendars.Read allows the app to read events in user calendars.
For your app to access data in Microsoft Graph, the user or administrator must grant it the correct permissions via a consent process.
Application permissions are used by apps that run without a signed-in user present; for example, apps that run as background services or daemons. Application permissions can only be consented by an administrator.
References: https://docs.microsoft.com/en-us/azure/active-directory/develop/v2-permissions-and-consent https://docs.microsoft.com/en-us/graph/permissions-reference

NEW QUESTION 53
- (Exam Topic 2)
You plan to create a Microsoft Teams application that uses action-based messaging extensions. For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 55
- (Exam Topic 2)
You are developing an Azure function to provision a team in Microsoft Teams.
You need to create a group named Project A, add a classification of Private to the group, and then convert Project A to a team group.
How should you complete the REST requests? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: post
You need to create a group named Project A.
The following example creates an Office 365 group. POST https://graph.microsoft.com/v1.0/groups Content-type: application/json
Content-length: 244
{
"description": "Self help community for library", "displayName": "Library Assist",
"groupTypes": ["Unified"
],
"mailEnabled": true, "mailNickname": "library", "securityEnabled": false
}
Box 2: PATCH
Add a classification of Private to the group.
You can set the classification property in a PATCH request for the group, if do not set it in the initial POST request that creates the group.
Box 3: put
Then convert Project A to a team group. Syntax: PUT /groups/{id}/team
References: https://docs.microsoft.com/en-us/graph/api/group-post-groups https://docs.microsoft.com/en-us/graph/api/resources/group
https://docs.microsoft.com/en-us/graph/api/team-put-teams

NEW QUESTION 56
- (Exam Topic 2)
You are building a Microsoft teams application by using an outgoing webhook.
For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 59
- (Exam Topic 2)
You are building email notifications for an expensing system.
When a user receives an email notification, the email will contain a comment field. When the user submits a comment, the data will be returned to the expensing system for processing.
What should you do to implement the notification by using the minimum amount of development effort?

A. Create a Microsoft Office Add-in that has an action pane to display the notifications
B. Leverage Microsoft Graph notifications
C. Leverage the Azure SignalR Service and implement web notifications
D. Configure the expensing system to send actionable messages

Answer: D

Explanation:
Whether you are filling out a survey, approving an expense report, or updating a CRM sales opportunity, Actionable Messages enable you to take quick actions right from within Outlook. Developers can now embed actions in their emails or notifications, elevating user engagement with their services and increasing organizational productivity.
Office 365 provides two solutions to enhance productivity with Outlook Actionable Messages: actionable messages via email, and actionable messages via Office 365 Connectors.
Reference: https://docs.microsoft.com/en-us/outlook/actionable-messages/

NEW QUESTION 61
- (Exam Topic 2)
You develop a web API named WebApi1.
When validating a token received from a client application, WebApi1 receives a MsalUiRequiredException exception from Azure Active Directory (Azure AD).
You need to formulate the response that WebApi1 will return to the client application. Which HTTP response should you send?

A. HTTP 307 Temporary Redirect
B. HTTP 400 Bad Request
C. HTTP 403 Forbidden
D. HTTP 412 Precondition Failed

Answer: D

Explanation:
The HyperText Transfer Protocol (HTTP) 412 Precondition Failed client error response code indicates that access to the target resource has been denied. This happens with conditional requests on methods other than GET or HEAD when the condition defined by the If-Unmodified-Since or If-None-Match headers is not fulfilled. In that case, the request, usually an upload or a modification of a resource, cannot be made and this error response is sent back.
MsalUiRequiredException
The "Ui Required" is proposed as a specialization of MsalServiceException named MsalUiRequiredException. This means you have attempted to use a non-interactive method of acquiring a token (e.g. AcquireTokenSilent), but MSAL could not do it silently. this can be because:
 you need to sign-in
 you need to consent

you need to go through a multi-factor authentication experience.
The remediation is to call AcquireTokenInteractive try
{
app.AcquireTokenXXX(scopes, account) WithYYYY(...)
ExecuteAsync()
}
catch(MsalUiRequiredException ex)
{
app.AcquireTokenInteractive(scopes) WithAccount(account)
WithClaims(ex.Claims) ExcecuteAsync();
}

NEW QUESTION 66
- (Exam Topic 2)
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Yes
The Adaptive Cards Designer provides a drag-and-drop experience to quickly build and tweak adaptive cards. Outlook Actionable Messages cards are designed using the Adaptive Card format. The Adaptive Card format
is a simple yet powerful declarative layout format that provides a lot of flexibility, allowing for visually rich cards. In this topic we'll cover the Outlook-specific features of the Adaptive Card format.
Box 2: Yes
The actionable message card is in JSON format. Box 3: No

By default, the Tenant Administrator can create, edit, clone, and delete tenants, and manage user accounts. Note:
To enable Actionable Messages the recipient of the task must be an Office 365 customer with permissions for the SharePoint online site.
No: Office 365 administrators can disable actionable messages via the Set-OrganizationConfig cmdlet. If actionable messages do not render, check with your administrator to make sure the feature is enabled in your organization.
Adaptive Cards Designer Microsoft outlook actionable messages
References: https://docs.microsoft.com/en-us/outlook/actionable-messages/adaptive-card https://gingkoapp.com/create-tenant-administrator.html

NEW QUESTION 70
- (Exam Topic 2)
This question requires that you evaluate the underlined text to determine if it is correct.
Microsoft Visual Studio Code contains samples that you can use to quickly prototype a Microsoft Office Web Add-in for Microsoft Word.
Instructions: Review the underlined text. If it makes the statement correct, select "No change is needed." If the statement is incorrect, select the answer choice that makes the statement correct.

A. No change is needed.
B. Microsoft AppSource
C. The Office UI Fabric
D. The Script Lab add-in

Answer: D

NEW QUESTION 71
- (Exam Topic 2)
You are designing a Microsoft Teams application. The application will enable content authors to start conversations about news coming from a third-party application.
Which development technique should you use?

A. incoming webhooks
B. outgoing webhooks
C. activity feeds
D. deep links

Answer: D

Explanation:
Create deep links to content and features in Microsoft Teams.
You can create links to information and features within the Teams client. Examples of where this may be useful:
 Your app automates or simplifies certain user tasks, such as creating a chat or scheduling a meeting, by pre-populating the deep links with required parameters. This avoids the need for users to manually enter information.
 Navigating the user to content within one of your app's tabs.
Reference: https://docs.microsoft.com/en-us/microsoftteams/platform/concepts/build-and-test/deep-links

NEW QUESTION 73
- (Exam Topic 2)
You are developing an application that will track changes to the UserPrincipalName attribute of Microsoft 365 accounts.
You need to use a REST request to retrieve the information by using Microsoft Graph. The solution must minimize the amount of data retrieved.
What should you do?

A. Use GET https://graph.microsoft.com/v1.0/users/delta for the first cal
B. Use the state token in subsequent calls.
C. Use GET https://graph.microsoft.com/v1.0/users/delta?$select=UserPrincipalName for the first cal
D. Use the state token in subsequent calls.
E. Use GET https://graph.microsoft.com/v1.0/users$select=UserPrincipalName for the calls and track the changes.
F. Use GET https://graph.microsoft.com/v1.0/users for the calls and track the changes.

Answer: B

Explanation:
Use delta query to track changes in a resource collection
The typical call pattern is as follows:application begins by calling a GET request with the delta function on the desired resource.
 Microsoft
 The Graph sends a response containing the requested resource and a state token.
Example: Selecting three properties
The next example shows the initial request selecting three properties for change tracking, with default response behavior.
Note: Delta query enables applications to discover newly created, updated, or deleted entities without performing a full read of the target resource with every request.
Reference: https://docs.microsoft.com/en-us/graph/api/user-delta

NEW QUESTION 76
- (Exam Topic 2)
You are developing a new Microsoft Office Add-in to integrate a corporate invoicing system and Microsoft Excel.
You need to add a new button to the Office ribbon. What should you add to the add-in?

A. a task pane
B. a dialog
C. a custom function
D. a command

Answer: D

Explanation:
Add commands to a custom group
* 1. In the Customize the Ribbon window under the Customize the Ribbon list, click the custom group that you want to add a command to.
* 2. In the Choose commands from list, click the list you want to add commands from, for example, Popular Commands or All Commands.

* 3. Click a command in the list that you choose.
* 4. Click Add.
* 5. To see and save your changes, click OK. Reference:
https://support.office.com/en-us/article/customize-the-ribbon-in-office-00f24ca7-6021-48d3-9514-a31a460ecb3

NEW QUESTION 79
- (Exam Topic 2)
You receive the following JSON document when you use Microsoft Graph to query the current signed-in user.

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Yes
Syntax: GET /me/photo/$value
Get the specified profilePhoto or its metadata (profilePhoto properties). Example: Get the photo for the signed-in user in the largest available size GET
https://graph.microsoft.com/v1.0/me/photo/$value
Box 2: Yes
Syntax: GET /users/{id | userPrincipalName}/photo/$value
Get the specified profilePhoto or its metadata (profilePhoto properties). Box 3: Yes
Syntax: GET /users/{id | userPrincipalName}/photo/$value
Get the specified profilePhoto or its metadata (profilePhoto properties). Reference: https://docs.microsoft.com/en-us/graph/api/profilephoto-get

NEW QUESTION 84
- (Exam Topic 2)
You are building a new tab as part of a new Microsoft Teams application. Users will experience the tab privately.
How should you complete the application manifest? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 85
- (Exam Topic 2)
You are developing in application named App1.
App1 needs to use the Microsoft Graph API to retrieve emails from Microsoft 365 for the current signed-in user. The solution must meet the following requirements:
 Emails that have attachments and are from bill@contoso.com must be retrieved.
 The results must show the subject of the email, the sender address, and the count of emails retrieved.
How should you complete the URI to retrieve the results? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: $count
Use $count as a query parameter to include a count of the total number of items in a collection alongside the page of data values returned from the Graph, as in the following example:
GET https://graph.microsoft.com/v1.0/me/contacts?$count=true Box 2: $select
To specify a different set of properties to return than the default set provided by the Graph, use the $select query option. The $select option allows for choosing a subset or superset of the default set returned.
Box 3: $filter
To filter the response data based on a set of criteria, use the $filter query option.
The following example returns messages that have the address field of the from property equal to "jon@contoso.com".
The from property is of the complex type emailAddress.
GET https://graph.microsoft.com/v1.0/me/messages?$filter=from/emailAddress/address eq 'jon@contoso.com' Reference: https://developer.microsoft.com/en-us/graph/docs/overview/query_parameters

NEW QUESTION 87
- (Exam Topic 2)

You have a backend service that will access the Microsoft Graph API.
You need to configure the service to authenticate by using the most secure authentication method. What should you configure the service to use?

A. a certificate
B. a client secret
C. a shared key
D. a hash

Answer: A

Explanation:
You can authenticate to the Graph API with two primary methods: AppId/Secret and certificate based authentication. Certificate is the preferred and more secure way of authenticating.

A. Provider-hosted
B. SharePoint-hosted
C. Domain isolated
D. Connected

Answer: A

NEW QUESTION 97
- (Exam Topic 2)
You are building a Microsoft Teams application.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Yes
Once an outgoing webhook is added to a team, it acts like bot, listening in channels for messages using
@mention, sending notifications to external web services, and responding with rich messages that can include cards and images.
Box 2: Yes
Webhooks are a great way for Teams to integrate with external apps. A webhook is essentially a POST request sent to a callback URL. In Teams, outgoing webhooks provide a simple way to allow users to send messages to your web service without having to go through the full process of creating bots via the Microsoft Bot Framework. Outgoing webhooks post data from Teams to any chosen service capable of accepting a JSON payload.
Box 3: Yes
Create an outgoing webhook
 Select the appropriate team and select Manage team from the (• • •) drop-down menu.
 Choose the Apps tab from the navigation bar.
 From the window's lower right corner select Create an outgoing webhook.
 In the resulting popup window complete the required fields:
 Name - The webhook title and @mention tap.
 Callback URL - The HTTPS endpoint that accepts JSON payloads and will receive POST requests from Teams.

NEW QUESTION 102
- (Exam Topic 2)
You plan to integrate a web-based support ticketing system and Microsoft Teams.
You need to recommend a solution that will prompt users for specific information before a ticket is created. The solution must minimize development effort.
What should you include in the recommendation?

A. outgoing webhooks
B. incoming webhooks
C. a notification-only bot
D. a conversational bot

Answer: A

Explanation:
Webhooks are a great way for Teams to integrate with external apps. A webhook is essentially a POST request sent to a callback URL. In Teams, outgoing webhooks provide a simple way to allow users to send messages to your web service without having to go through the full process of creating bots via the Microsoft Bot Framework. Outgoing webhooks post data from Teams to any chosen service capable of accepting a JSON payload. Once an outgoing webhook is added to a team, it acts like bot, listening in channels for messages using @mention, sending notifications to external web services, and responding with rich messages that can include cards and images.
