NEW QUESTION 1
- (Exam Topic 5)
You have a Microsoft Exchange Online tenant that uses a third-party email hygiene system named Service1. Service1 blocks all encrypted email.
All external email is routed through Service1 by using a connector.
Users classify email by using sensitivity labels. Emails classified as Secret are encrypted automatically. You need to ensure that the users can send emails classified as Secret to external recipients.
Which two items should you create? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.

A. a remote domain
B. a connector
C. a data loss prevention (DLP) policy
D. a mail flow rule
E. a label policy

Answer: BD

Explanation:
Use an additional Connector and a Mail Flow Rule to bypass the third-party email hygiene system for emails that have the Secret sensitivity label.
Emails with the sensitivity label will use the new connector. All other emails will use the existing connector. Reference:

NEW QUESTION 2
- (Exam Topic 5)
Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.
When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.
Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.
Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.
Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to
return to the lab.

NEW QUESTION 63
- (Exam Topic 3)
User3 leaves the company.
You need to ensure that Admin1 and Admin2 can access the mailbox of User3. The solution must meet the technical requirements.
What should you do?

A. Migrate the mailbox of User3 to a distribution group.
B. Migrate the mailbox of User3 to a Microsoft 365 group.

C. Convert the mailbox of User3 into a resource mailbox.
D. Convert the mailbox of User3 into a shared mailbox.

Answer: D

Explanation:
Fabrikam identifies the following technical requirements:

≫ When users leave the company, remove their licenses and ensure that their mailbox is accessible to Admin1 and Admin2.
If you remove the license from User3, the mailbox will be deleted after 30 days. Converting the mailbox to a shared mailbox will ensure that the mailbox is not deleted. You would still need to give Admin1 and Admin2 permissions to access the mailbox.

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.
When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.
Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.
Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.
Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

Use the following login credentials as needed:
To enter your username, place your cursor in the Sign in box and click on the username below.
To enter your password, place your cursor in the Enter password box and click on the password below.

- Mailbox database: Click Browse
When you're finished, click Save.
to select the location in Active Directory where the mailbox object is to select the mailbox database where the mailbox is created.
Use the EAC to create a public folder
When using the EAC to create a public folder, you'll only be able to set the name and the path of the public folder. To configure additional settings, you'll need to edit the public folder after it's created.
≫ Navigate to Public folders
>Public folders.
≫ If you want to create this public folder as a child of an existing public folder, click the existing public folder in the list view. If you want to create a top-level public folder, skip this step.
≫ Click Add +.
≫ In Public Folder, type the name of the public folder.
≫ In the Path
box, verify the path to the public folder. If this isn't the desired path, clickCancel
and follow Step 2 of this procedure.
≫ Click Save.
≫ Navigate back to Public folders
>Public folders.
≫ In the list view, select the public folder that you want to mail-enable or mail-disable.
≫ In the details pane, under Mail settings, click Enable
oDr isable.
≫ A warning box displays asking if you're sure you want to enable or disable email for the public folder.
Click Yes
to continue.
You can then run the Set-MailPublicFolder PowerShell cmdlet, and include the AcceptMessagesOnlyFromDLMembers parameter to specify who is allowed to send messages to this recipient.

NEW QUESTION 167
- (Exam Topic 5)
You have a Microsoft Exchange Server 2019 hybrid deployment. All Mailbox servers and domain controllers are in the same site. You deploy an Edge Transport server.
You need to ensure that all SMTP traffic between the on-premises organization and Exchange Online is routed through the Edge Transport server.
Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
On a Mailbox server, modify the accepted domains.	
Copy the Edge Subscription file to a Mailbox server.	
On the Edge Transport server, run `New-EdgeSubscription`.	
On a Mailbox server, run `New-EdgeSubscription`.	
Run the Microsoft Office 365 Hybrid Configuration wizard.

Answer: A

Explanation:

Go to the Microsoft 365 Defender portal and undEemr ail & collaboration policy.

≫ An alert policy consists of the following settings and conditions.

selecPt olicies & rules

>Alert

- Activity the alert is tracking. You create a policy to track an activity or in some cases a few related activities, such a sharing a file with an external user by sharing it, assigning access permissions, or creating an anonymous link. When a user performs the activity defined by the policy, an alert is triggered based on the alert threshold settings.

- Activity conditions. For most activities, you can define additional conditions that must be met to trigger an alert. Common conditions include IP addresses (so that an alert is triggered when the user performs the activity on a computer with a specific IP address or within an IP address range), whether an alert is triggered if a specific user or users perform that activity, and whether the activity is performed on a specific file name or URL. You can also configure a condition that triggers an alert when the activity is performed by any user in your organization. The available conditions are dependent on the selected activity.

≫ You can also define user tags as a condition of an alert policy. This results in the alerts triggered by the policy to include the context of the impacted user. You can use system user tags or custom user tags.

- When the alert is triggered. You can configure a setting that defines how often an activity can occur before an alert is triggered. This allows you to set up a policy to generate an alert every time an activity matches the policy conditions, when a certain threshold is exceeded, or when the occurrence of the activity the alert is tracking becomes unusual for your organization.

≫ If you select the setting based on unusual activity, Microsoft establishes a baseline value that defines the normal frequency for the selected activity. It takes up to seven days to establish this baseline, during which alerts won't be generated. After the baseline is established, an alert is triggered when the frequency of the activity tracked by the alert policy greatly exceeds the baseline value. For

auditing-related activities (such as file and folder activities), you can establish a baseline based on a single user or based on all users in your organization; for malware-related activities, you can establish a baseline based on a single malware family, a single recipient, or all messages in your organization.

- Alert category. To help with tracking and managing the alerts generated by a policy, you can assign one of the following categories to a policy.

- Data loss prevention

- Information governance

- Mail flow

- Permissions

- Threat management

- Others

> When an activity occurs that matches the conditions of the alert policy, the alert that's generated is tagged with the category defined in this setting. This allows you to track and manage alerts that have the
same category setting on the Alerts
based on category.
page in the compliance center because you can sort and filter alerts
- Alert severity. Similar to the alert category, you assign a severity attribute (Low, Medium, High, or Informational) to alert policies. Like the alert category, when an activity occurs that matches the conditions of the alert policy, the alert that's generated is tagged with the same severity level that's set for the alert policy. Again, this allows you to track and manage alerts that have the same severity setting on the Alerts
page. For
example, you can filter the list of alerts so that only alerts with a High
severity are displayed.
- Email notifications. You can set up the policy so that email notifications are sent (or not sent) to a list of users when an alert is triggered. You can also set a daily notification limit so that once the maximum number of notifications has been reached, no more notifications are sent for the alert during that day. In addition to email notifications, you or other administrators can view the alerts that are triggered by a policy on the Alerts
page. Consider enabling email notifications for alert policies of a specific category or that have a higher severity setting.

You need to reduce the likelihood that malicious links contained in emails received by mailboxes in
@lab.CloudCredential(1).TenantName are opened.
To complete this task, sign in to the Exchange admin center.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

≫ Navigate to the Exchange Admin Center, and then choose the Advanced Threats
section of the EAC.

≫ Click the Safe Links
tab to examine all existing Safe Links policies:

≫ After navigating to the Safe Links policy page, choose the Add
button (+) to create a new policy. The
New Safe Links Policy
window opens.
- In the resulting window we'll be presented with the options available for creating our new Safe Links policy.

≫ In Name
enter an appropriate, unique, name that describes this policy. In the description enter some text
that provides a little more detail for anyone trying to make sense of the options selected here.

≫ Next we'll choose the action to take for URLs. We can leave this Off, if for example we are creating a policy to exclude a group of users that would otherwise
be affected by another Safe Links policy.

≫ The checkbox Do not track user click
can be selected if you do not wish to use the reporting
functionality available at a later date. This is a key feature when understanding which users clicked a link that was later found to be a threat, so be careful about
choosing to disable user click tracking.

≫ Our final check box provides options for click-through is a link is found to be dangerous. In some circumstances you may trust users to click-through links, or
they may request the ability to do so. In
most circumstances you will not
want a user to click-through the malicious link.

≫ Some URLs, such as those for internal addresses or even trusted partners, may not require re-writing.
Enter these URLs here.

≫ Finally, we will select the scope for the rule under the Applied to
section.

≫ Using similar conditions to transport rules we can select who this rule applies to including:
- Individual recipients
- Recipient domains
- Members of distribution groups

≫ The same conditions can be used for exceptions. When you have configured your rule, choose Save.
After saving the new Safe Links rule it will be shown in the EAC list. Just like Transport Rules, you can use the Enabled column to enable or disable the Safe Links
policy.
