A company uses Dynamics 365 Finance. The company uses a number sequence named GenJml\_01 for general journal vouchers. The number sequence is configured as follows:

Configuration option	Value
Format	GNJL####
Smallest number allocation	1
Largest number allocation	9999
Next number allocation	10000
Allow user changes to a lower number	No
Allow user changes to a higher number	No

A user receives the following error message when creating a new general journal: Number sequence GenJrn\_01 has been exceeded.

You need to update the configuration of the number sequence to resolve the error.

Which two actions should you perform? Each correct answer presents pan of the solution.

NOTE: Each correct selection it worth one point.

- A. Update Allow user changes to a higher number to Yes.
- B. Update the number format to GNJL#####.
- C. Update the Next number allocation to 1.
- D. Update the Largest number allocation to 99999.
- E. Update the Smallest number allocation to 1000.

**Answer:** BD

#### Explanation:

When the number sequence in Dynamics AX has reached the highest number, an error message will occur, “number sequence has been exceeded.” This can occur with any process done in Dynamics AX that uses a number sequence. The example below occurred when a sales order was trying to be confirmed. Due to the number sequence reaching the highest number, the system will not allow the sales order conformation to be completed.

To fix the issue, you will first need to look up the number sequence that will need to be changed.

\* 1. Go to Accounts receivables> Accounts Receivables Parameters

\* 2. Look for Conformation

\* 3. Right-click view details on number sequence code (Sales\_31)

\* 4. Click edit

\* 5. Add another # in an alphanumeric segment that will extend the value field

\* 6. Add another 9 in the largest field

\* 7. Click edit again to save

#### NEW QUESTION 220

SIMULATION - (Topic 6)

You are a functional consultant for Contoso Entertainment System USA (USMF).

You need to prevent a user named Arnie from adding receivable records to the customer payment journal. The solution must use only the default security roles. To complete this task, sign in to the Dynamics 365 portal.

- A. Mastered  
B. Not Mastered

**Answer:** A

**Explanation:**

The Accounts receivable payments clerk role contains the maintain customer payments duty. One of the privileges in the maintain customer payments duty is the Post customer payment journal transactions privilege.

You need to duplicate the Accounts receivable payments clerk role and duplicate the maintain customer payments duty. Remove the Post customer payment journal privilege from the new duty. Remove the original maintain customer payments duty from the new role and add the new duty to the role. Remove the Accounts receivable payments clerk role from Arnie and assign the new role to Arnie.

This solution will ensure that Arnie can do everything he could do before with the exception of adding receivable records to the customer payment journal. It will also ensure that anyone else assigned to the Accounts receivable payments clerk role can do everything they'd expect to be able to do with that role.

An alternative solution would be to deny the Post customer payment journal transactions privilege in the maintain customer payments duty. However, this solution would affect all users assigned to the Accounts receivable payments clerk role.

- A. Mastered
- B. Not Mastered

**Answer:** A

#### Explanation:

Box 1: Trace parser

You can diagnose issues and analyze performance by using Trace parser.

You can use the Trace parser to consume traces and analyze performance in your deployment. You can use the Trace Parser to find and diagnose various types of errors. You can also use the tool to visualize execution of X++ methods, as well as the execution call tree.

Box 2: Review X++ calls.

Trace Parser can help identify performance issues including long-running X++ methods, time-consuming SQL queries, or client server calls. Trace Parser consolidates information

from multiple sources, such as remote procedure calls (RPCs) and Microsoft SQL Server, to provide an integrated view of application performance for a process.

Trace Parser not only measures code execution, but also provides information about database execution times and may indicate performance issues due to caching.

#### NEW QUESTION 253

- (Topic 6)

A company uses Dynamics 365 Supply Chain Management.

A batch job that is running in the production environment must be canceled.

You attempt to cancel the batch job. The batch job is not canceled within a reasonable time period.

You need to force the batch job to stop processing. What should you do?

- A. Use the Abort function on the batch task.
- B. Update the recurrence of the batch job.
- C. Set the status of the batch job to Withhold.
- D. Delete the batch job.

**Answer:** A

#### Explanation:

Cancel an executing batch job

Complete the following steps to immediately cancel the running task.

? Go to System administration > Inquiries > Batch jobs.

? Select a batch job that has a Status of Canceling.

? On the Batch tasks tab, select Abort on the task, and then select OK.

Note: Sometimes canceling a batch job can take a long time if already executing tasks will take a long time to finish. This option provides a system administrator or batch job manager with the ability to cancel already executing tasks for jobs that are in the process of being canceled. This provides a much faster mechanism to cancel a long running job that is impacting system usage elsewhere.

You need to implement the testing feature to address the manufacturing business process concerns. Which feature should you use?

- A. Derived
- B. Assignment
- C. Operators
- D. Channel
- E. Snapshot

**Answer:** A

#### Explanation:

Derived test cases

The Regression suite automation tool (RSAT) lets you use the same task recording with multiple test cases, so that you can run a task with different data configurations. Select a test case in the Regression suite automation tool and then select New > Create Derived Test Case. This creates a child test case in Azure DevOps. The resulting derived test case is linked to its parent test case in Azure DevOps. It has an Excel parameters file attached but no recording file. The derived test case will appear in the Regression suite automation tool grid under the same test suite with the Derived column selected. By default, derived test cases are named after their parent test case with a numeric suffix.
